The free trade-unions in the underdeveloped areas have done a praiseworthy job in fighting off Communist and Fascist infiltration, while striving to better the lot of their members. In this they have been aided with funds and advice from United States trade-unions. The Advisory Board recommends the continued encouragement of the free labor unions in the underdeveloped areas.

We again reiterate the need of prosecuting this program in full and in placing it in positive terms of an affirmative United States policy.

Above all, we wish to emphasize the need to utilize fully the trade union resources in both the substantive programs and in technical assistance. Labor must play a leading part in helping the balanced progress in economic development. For upon free labor falls the double duty as a guardian against Communist subversion and as a guardian against exploitation.

I would like to add one word, Mr. Chairman, that in the contemplated programs of capital investment we feel it is vitally important that the recommendation of the Rockefeller board to maintain minimum labor standards set by the ILO will not be overlooked. The minimum standards need to be maintained. The minimum labor standards need to be supplemented by a basis in which there is a full realization on the part of the people in those areas that the investment will not be for exploitation.

I want to thank you, Mr. Carnahan, for your patience and your generosity in the time you have afforded me. I appreciate the opportunity to be heard.

Mr. CARNAHAN (presiding). We are grateful to you for bringing us this very thoughtful statement. It will be worth a lot to the committee in our consideration of the bills before us.

I will not go around completely. I will do as I did before. I will recognize any of you who have questions for 5 minutes. Mr. Vorys.

Mr. Vorys. Mr. Shishkin, are you going to appear before the Senate committee?

Mr. SHISHKIN. I think the American Federation of Labor will ask for an opportunity to be heard.

Mr. Vorys. I hope you can do some missionary work there.

We had some provisions in the point 4 legislation last year somewhat along the lines you recommend, I think possibly due somewhat to your inspiration. They died in conference. We are not permitted to speak of the other body, but I urge you to tell the story there too.

I was encouraged when you said "advance acceptance by the participating countries of positive conditions." Then your only legislative suggestion was to change some words in the declaration of policy. We have found out that we can put anything we please in the declaration of policy, but unless you write in conditions that our negotiators have to consider, such as in section 115 in ECA, and we have a few in the point 4 legislation, our negotiators horse around and say, "Well, we talk to them about it. We used our influence and coaxed, but they did not want to do it. So we did not do anything about it." I wondered what your idea was about writing in positive advance conditions.

Mr. SHISHKIN. I will be glad to accept your amendment. Perhaps we have not gone far enough. We will be glad to go one step further. The reason I presented it this way was that in the Economic Cooperation Administration, which I think is an exception, they have accepted the declaration of policy very literally. They pursued it almost to a fault in taking that to be a substantive part of the legislation.

Section 102 is written a little differently. It is translated into an affirmative statement, into an operating policy, in the same section.

The important thing is to have the acceptance by OEEC, NATO, and other international organizations which are formed to handle the aid provided, to write that into their operating instrumentality as a condition of their participation in the receiving and administering our aid. Or, if bilateral agreements are made, to have them written in the bilateral agreements where appropriate.

Mr. VORYS. That is what I thought you were talking about, specific legislative conditions and advance acceptance by participating countries of such conditions. They would not be the only conditions you recommend, but other conditions.

We find this situation: We have stuff written into the purpose clause and elsewhere in ECA, and in MDAP.

Mr. Foster comes here, the MDAP fellows come here and say that this is not going the way they thought it should, and the way we thought it should and the way we had it in the law, that they could not get them to do it.

You have had some experience over there. I wonder if it might not help our negotiators to force them to say, "We do not want to hurt anybody's feelings, and we are sorry, boys, but this time it is different. We have a new law. You do not get the money unless you agree to this in advance. Then if you do not go through with your agreement, we have to stop letting you have the money."

As you say, the money comes back here. Would that work?

Mr. SHISHKIN. I would suggest, Mr. Vorys, that it will help a lot if the requirement be made in advance of the aid extended rather than in the specific negotiations. So our representatives would not be put in the position of trading on principles. This is a principle. That is the reason we stated it broadly. It should be made a condition. For example, there is a production-assistance program which is being developed in ECA, which has vast implications to the rebuilding of Europe on all fronts.

That kind of a program, to our mind, will be effective only if it is conditional. If it is conditioned on the plant-to-plant basis in France, Italy, and any other country, where technical assistance aid and tools will be provided only if there is an agreement—

Mr. VORYS. A three-way split?

Mr. SHISHKIN. Of making the benefits of that aid go to the consumers and the wage earners as well as the management.

Mr. VORYS. I think I have taken my time.

Mr. CARNAHAN (presiding). Are there any other questions?

Mr. FULTON.

Mr. FULTON. I want to thank Mr. Shishkin for his lucid and logical statement, as usual. We always enjoy his views when he comes here. I am interested about implementing the aid with economic conditions, but I am also interested in implementing the aid and the movement

toward greater democracy, with humanitarian conditions, liberties, and rights.

My one suggestion on your statement would be that you have emphasized the economic. But also as a correlative there should be emphasis put on these conditions that have to do with the movements of the countries generally toward the economic liberties and the liberties that we know.

For example, there might be a condition for freedom of religion in Greece, freedom of political prisoners.

In Yugoslavia, for example, there might be the further release of people who stand up for human rights as officers of the Government; witness the minister of the Government of the pre-Tito regime in the last few days.

Do you not think under those circumstances that the conditions should be expanded somewhat so that on the basis of your premise our representatives are not trading in principles?

Mr. SHISHKIN. I think you are quite right, that our statement of purposes and our statement of principles ought to be underlying our relationship in this way.

I would agree entirely with you if it were not for one question of getting involved politically. That is the extent to which we have a practical problem confronting a particular government today, let us say the Government of Belgium or Greece. At a specific juncture, when we come as representatives of the United States carrying economic aid and deal with the political questions involving freedoms of that kind, you get into something else. It may become a part of an economic bargain which might create a false impression with regard to our condition.

Mr. FULTON. Can we distinguish between two types of countries? One would be the countries which have a dictatorship type of government, either right or left; the others are the countries that have fundamental liberties that, nevertheless, need certain reforms, for example, against monopolistic controls and cartels.

In the type country where public opinion can be influenced, we should proceed on one basis, that would be Turkey, Greece, Belgium, France. But in the other type countries, such as Tito's dictatorship or Franco's dictatorship, do you not think we would be doing the people a service by inserting a declaration of these principles as conditions ahead of time? We do not then negotiate or bargain on certain standards they must meet?

Mr. SHISHKIN. I think with that modification I would go along with you.

Mr. FULTON. For example, in Formosa, on the system of slavery of young indentured girls that they have never corrected to this day. This is a system by which girls are kept as slaves without pay and sold by their families to other families for this purpose, and then later may be sold, as can now be done, under Formosan law into indentured services. We should proceed to put correction of those basic conditions as a condition upon which we will grant aid. Is that not possible?

Mr. SHISHKIN. I believe so. Of course, in Asia, where conditions are so different, our underwriting of aid on condition of major reforms or kind of changes that are necessary, is clearly desirable. But the actual immediate steps to be taken in order to provide the first

move toward the institutions toward which these people would look, would be far wiser than to come with promises of pie in the sky.

It will give more hopes as to the kind of things that are necessary as the first immediate step toward emancipation for a lot of people that have not even realized, despite the kind of revolutionary spirit in which they are imbued.

Mr. FULTON. The reason I am emphasizing this point is that when we come to our friends and allies we are always very strict, for example, in the Philippines on the aid just being given. We have put very stringent prior conditions that they must meet, both as to terms, as to government finances, and even as to the economics, before we would even negotiate for aid.

Why do we not do it for these other more backward countries?

Mr. SHUSKIN. There are two problems there. I have given you the first one. The second is that the institutions in that country have to be developed to deal with the problem itself. There have to be trade unions developed in the backward areas, as in southeast Asia.

Yet the very fact that they know that in order to achieve the reform they will rely on their own institution in that particular country is vastly more important than to try to rely on us and to run to some foreign adviser.

One of the last visits I made was in Turkey. They have a young trade union movement that has just been liberated from far-reaching restrictions of a dictatorship. I was the first American trade-union member to visit their trade-union confederation. There were many things they were groping for in the dark. We could help them. We do not have a labor attaché in the Ankara Mission. Argentina has; America does not. I am glad to say that as a result of my visit a labor attaché is going to be assigned there, and I hope it will be a competent person.

Here is a trade-union movement in Turkey in which the people are committed to every possible effort toward building a democracy with their own hands. We have to look to that institution to develop through their own efforts, as well as other native democratic institutions in all walks of life. That is their strength—their self-reliance.

Mr. CARNAHAN (presiding). Your time has expired.

Mr. FULTON. Do you not think we should hold back the heavy hand of dictatorship so these freedoms and those voluntary organizations can arise?

Mr. SHUSKIN. I think, Mr. Fulton, if it had not been for the American aid in Turkey, Turkey today would still be a dictatorship.

Mr. CARNAHAN (presiding). Mr. Javits.

Mr. JAVITS. We are glad to see you here. I have one main question and a couple of subsidiary ones.

Out of the considerable experience you have had with the workers in Europe, do you feel that if we undertake the Mutual Security Program, broadly speaking along the lines that have been outlined, there will be lots of changes? That it will give the European worker enough continuing heart to produce and to fight, if need be, with the feeling that he really has something to work for, some real objective worth working for, and even risking his life for.

Mr. SHUSKIN. I think if the proposed program in the size and the general approach which has been stated is done, it is positive assistance by the United States that will help those people have the kind of life

they are striving for, and that to be able to do this job themselves they will fight for it.

I think if we come to them and say, "A year ago the Congress of the United States provided this aid because it said these objectives were possible," they will have forgotten about that. If we say, "It is all for defense. It is all for ammunition only," I do not think it will give the Europeans heart.

I had a discussion with the late Admiral Sherman, with Admiral Carney, Admiral Ballantine, in the Mediterranean, and their first conviction—these are top military men—their deepest conviction was that our primary responsibility was to win the will of these people and make them sure that they understand that we are the revolution, that the oppression comes from the Soviet Government.

That was more clearly understood, I might say, by some of the military people representing us abroad than by some of the civilians in the diplomatic service.

Mr. JAVITS. As a personal note, I might tell you, I made a commencement address in New York City, and the subject of the address was that we are the revolution, in terms of real improvement for the free world, just the very words you used.

Mr. SHISHKIN. I might say, from personal experience, that the people in the outlying villages of Europe are for the first time realizing that this is really so. This is not just something that publicity men have written. We are offering the hope of the kind of a job we have done ourselves. Dictatorships are now for the first time identified by them with the kind of thing that Moscow gives.

Mr. JAVITS. Are we to understand, therefore, that the ECA has not been that program up to now? In other words, let us give the ECA the best of it, and assume it was designed to stabilize governments and give them some opportunity for putting their economic situations and balances of trade in some kind of order.

Do we understand then that is as far as ECA went, and that we still have to accomplish a program which you describe to get to the hearts and minds of the individual, especially in Europe?

Mr. SHISHKIN. I think I agree entirely with your approach. I think it has to be put in tangible forms in specific cases. I would say to you it would be best for us not to undertake a productivity project in a plant, a demonstration project in a particular plant, with our aid and our technicians, with the amounts coming in and providing a demonstration of what can be done with that plant, unless we have the advance assurance that in the improvement and organization of that plant, that plant is going to be producing for the benefit of the community, translating the lower cost in the form of lower prices and higher wages.

Unless that is done, I do not think it is worth our while to do it, because we will be identified with the feudal attitude of the employer.

Mr. JAVITS. Thank you, Mr. Chairman.

Mr. CARNAHAN (presiding). Mrs. Kelly.

Mrs. KELLY. I am very happy, Mr. Shishkin, to have a well-known economist to ask a problem that has been bothering me for a long time.

Do you believe this present crisis we are passing through, particularly in Europe, is a problem of wartime dislocation, or do you believe it is a permanent basic economic change due to a world-wide shift in

industrial development? I mean, the Old World industrial supremacy giving over to the Western industrial supremacy.

Mr. SHISHKIN. I think it is definitely the latter. I think the historical change antedates the war by perhaps almost as long as 100 years.

It seems to me, because we are in the advance position, and particularly during the last 20 years—20 years ago we were a secondary power, secondary trading power, secondary merchant marine, Navy, and today we have half of the world's manufacturing production—we are in the lead and have a special responsibility.

Our identity with the raising of the standards of living in other countries, our identity at this time when we have the defense program pressed upon us by the Communists, is particularly important. It is our leadership with which we can win the support and the following in the great half of the world which is really not identified with the free world—in the undeveloped areas, where great masses of people are still not self-governing.

I wanted to add in that connection, Mr. Chairman, that is, in connection with the organization of defense, of course, we feel strongly that Greece and Turkey should be included in the NATO organization.

Also, I would like to add, it does seem highly questionable to have the United States identified with the kind of thing that was carried in the newspaper headlines the other day:

In order to win the United States support, Franco agrees to restoration of a monarchy.

I am sure that is false, but that was a headline in the newspapers. We are not identified, and we do not want to be identified. We do not want to be put in a position like that when the Ambassador of the United States in knee breeches and white stockings rides to a reception with Franco in a carriage handed down from Washington Irving, driven by six white horses. Today in Europe there is a revolt against oppression and those conditions.

We have to grow up and face those realities today.

Mrs. KELLY. Are we facing this then in the right manner, in endeavoring to have the trade account of the nations balance?

Mr. SHISHKIN. We have developed the OEEC. Today there is a greater need than ever for the integration of European trade with the Western Hemisphere. Take the European Payment Union, for example. In order to survive it will have to be brought into a broader context of multilateral trade with the west.

Mr. Chairman, before I am excused I particularly wanted to say one word about a man to whom our country owes much. In my experience in the 3 years of service which I have had representing the United States, I want to pay a particular tribute to Averell Harriman. I cannot tell you how much we owe to him as a country for succeeding in some of the impossible tasks which we had undertaken when he came out there unaided and unguided to launch a Marshall plan in Western Europe. I think he has done a truly remarkable job, which because of his modesty it is easy to overlook. I wanted to testify to it personally.

Mr. CARNAHAN (presiding). Are there other questions?

Mrs. BOLTON. I have one question I would like to ask.

I wanted to speak about the per capita item in this table. If Mr. Smith were here tonight, I am sure he would want to say something

about the effect of the low income on the productivity for military assistance, and so on, in France.

Is there a point beyond which the people cannot be pushed? If the production for military purposes prevents production for a better standard of living, because the French do have a pretty low basis, what would be your idea of the effect upon them?

Mr. SHISHKIN. If I understand the question correctly, Mrs. Bolton, I would point out we have to be practical about it. Time is urgent. We do have skills and facilities in these countries in which we can do the immediate things, and that is to utilize the available skills and dexterities.

As far as the immediate objective of the military attainment of the necessary strength, it would not be realistic for us to begin to build the plant in France, and have it built 2 years later and go into production then to provide that production needed now. But for us to realize that a large part of war production could be made in the form of components here, but the assembly work done there, the contribution of that effort would provide for the extension of facilities gradually for the internal production and raising of the standard of living.

Mrs. BOLTON. I think Mr. Smith would have a good deal of his troubled thinking eased if he could have heard what you have said.

Mr. SHISHKIN. I can testify that in Greece, where the per capita income is half even of that of Italy, they could build five hydroelectric plants which would break the bottleneck and would double the standard of living in the next 5 years in Greece.

That would be such a tremendous thing that it would stand in the minds of those people as one of the most important milestones of their modern history. That would mean the transition from the forced agricultural handicraft production into a mechanized production for the first time. That would be the point of departure.

Mr. CARNAHAN (presiding). Mr. Herter.

Mr. HERTER. First of all, I want to compliment Mr. Shishkin, and Mr. Irving Brown, who worked with him for many years, on the tremendous contribution they have made to the success of the Marshall plan in Europe, a very signal success.

The question I wanted to ask is this: Do you agree with your predecessor, Mr. Baker, in feeling that in our approach—the legislative approach, not the administrative approach—we ought to operate along functional rather than regional lines?

Mr. SHISHKIN. I was making a mental note of that question when Mr. Baker testified. It seemed to me the functional approach itself certainly is the approach. I do not think it would preclude the regional organization for administrative purposes.

Mr. HERTER. That would be within the organization. I am speaking of legislative purposes only.

Mr. SHISHKIN. That is correct.

Mr. CARNAHAN (presiding). Are there further questions? If not, the committee will stand adjourned until 10 o'clock tomorrow morning.

(Whereupon, at 10:27 p. m., the committee adjourned to reconvene the following day at 10 a. m.)

THE MUTUAL SECURITY PROGRAM

THURSDAY, JULY 26, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the House Foreign Affairs Committee room, the Capitol, at 10 a. m., Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

Ladies and gentlemen, we will continue the hearings on the pending Mutual Security Program. We have with us this morning Mr. Richard Bissell, Deputy Administrator of the ECA. We also have Mr. John H. Ohly, Acting Assistant Director, Office of International Security Affairs, who will sit with him. They will act as a team, with Brig. Gen. George H. Olmsted, Deputy Assistant Chief of Staff, G-4, Department of the Army.

Mr. Bissell, will you come around, please, sir. We are mighty glad that you are out of the hospital, and we hope you will not have any more appendixes bother you.

Mr. BISSELL. That is one disease I will not catch again.

Chairman RICHARDS. Mr. Bissell has been with us on former occasions. We are delighted to have you back here to throw some light on this very intricate subject.

Mr. Bissell, will you proceed in your own way? Have you a prepared statement?

Mr. BISSELL. I do not, sir. We had proposed that Mr. Ohly would start off, very briefly, if that is satisfactory with the committee.

Chairman RICHARDS. We will leave the procedure to you. If Mr. Ohly wants to make a statement now, he may do so.

STATEMENT OF JOHN H. OHLY, ACTING ASSISTANT DIRECTOR, OFFICE OF INTERNATIONAL SECURITY AFFAIRS

Mr. OHLY. Mr. Chairman and members of the committee, the purpose of the presentation this morning is to set forth and summarize succinctly and try to demonstrate the validity, beyond any reasonable doubt, of the program which we propose for Europe.

This is an intricate problem to present. We have decided the best way to do it is a team presentation. I am, in some respects, the ringmaster.

Mr. Bissell is here representing the Economic Cooperation Administration; General Olmsted is here from the Department of Defense, along with General Scott. Behind me, representing the political side of the State Department, is Mr. Martin, Director of the Office of Regional Affairs in the European Bureau.

Between us, and among us, we hope we can answer any questions you might have.

I would like at the outset to outline the points or the subjects which we would like to cover during the course of our presentation today.

You will want to interrupt many times with questions, but I would like each time after the question to bring us back to the outline so that when we get through we will have covered the various points in our agenda.

The points our group would like to make today are these: First, that this program in its generalities and in its details is founded upon and directly flows from a specific plan of action in Europe.

Second, that the total size of the program is, in our judgment, the minimum through which we can accomplish what must be done during the coming year.

Third, that the program as a whole, as we present it, is feasible and can be handled with the economic resources available to the United States.

Fourth, that the task which we are trying to accomplish in Europe can be greatly facilitated if it becomes possible to utilize the resources, the manpower, and the strategic location of Germany, Spain, and Yugoslavia, and I shall indicate how we have taken those possibilities into account in the preparation of this program.

Finally, we would like to take you country by country through the program as we have developed it in Europe, to show the military tasks that each country must carry out, the economic consequence of carrying out those military tasks, and the specific military and economic programs we have developed to help carry out these tasks.

Mr. EATON. Will you tell me who you mean by "we?"

Mr. OHLY. I am talking here about the team, and the team back-stopped by the agencies we represent.

Mr. EATON. Yes; but who is "we?"

Mr. OHLY. The executive branch of the Government.

Mr. EATON. I just wanted to make sure we were not involved.

Mr. OHLY. I hope you will be by the time we are through, and will join with us, Dr. Eaton.

I will start off by giving a general outline of the background. Then I am going to turn the matter over to General Olmsted for a short time to take up specifically the question of production capabilities, to show how these military programs have been meshed with and geared into our own military production program, and why we believe the foreign military aid programs we propose are feasible.

Then Mr. Bissell will take over, on the economic side, and cover a lot of points that have not yet been covered in these hearings. Then, operating as a group, we will take up this thing country by country.

Mr. VORYS. We have had an awful lot of background material.

Mr. OHLY. I realize that, Mr. Vorys. I think the things which I am going to talk about, while they may be general, will be of a type that you have not had.

Leaving aside the problem of Austria and Trieste, the problem we have in Europe is to equip and maintain the forces required to deter Soviet aggression in the North Atlantic Treaty area, or, if necessary, to defend against such aggression, and to do that while still maintaining in Europe political, social, and economic stability that will insure against the conquest of Europe through subversion.

This, I emphasize, must be done quickly. The time factor is a factor that we must not overlook.

(Discussion off the record.)

Mr. ONLY. We would have liked to have had those forces yesterday, not only in the terms of the defense of Europe, but because a solid core of military power in Europe means you can make collective security work elsewhere in the world.

This problem, or a major share of it, can be translated into a specific concrete plan, which has been developed by the North Atlantic Treaty Organization.

I say a "major share of the problem" because there are certain other peripheral problems. We must remember we are counting on certain of those North Atlantic Treaty countries, at the same time that they put up defenses in Europe, to carry on major tasks against communism elsewhere in the world, such as in Indochina, Malaya, and the Middle East.

In making our calculations with respect to what Europe can and should do, we must never forget that we are counting on those European countries to do these other tasks. The NATO plan at the moment, moreover, does not take into account the possibility of utilizing German, Spanish, or Yugoslavian manpower, and, therefore, I say the plan is only part of the problem.

This plan calls for the raising within a period of several years, and it is very carefully phased out, of a specified number of forces. I will not state specifically what those numbers of divisions are.

(Discussion off the record.)

Mr. ONLY. This plan means that Europeans must do several things. They must raise troops; they must equip those troops with military hardware; they must build the facilities that are necessary to maintain those troops and support them, the airfields, the lines of communication, and all the other many things which are necessary to military operations.

They must maintain those troops and provide them with food and clothing. We must never forget, in looking at this equipment problem, that these European countries, together with our assistance, must also do all of these other things, and those things are a real tax on their resources.

What we have done has been to attempt to convert this several-year plan—and we talk of it in terms here of approximately 3 years—into what it will cost, what it will cost to carry out this plan.

(Discussion off the record.)

Mr. ONLY. Of the total cost, roughly 50 percent represents major matériel costs—hardware. The balance represents the cost of raising troops, paying them, providing them with all the soft goods—food, clothing, and other similar things, and constructing the necessary facilities.

Having determined those costs, we then set about to make the best forecast we could of how much of that cost could be underwritten by Europe with a certain amount of economic assistance from us.

(Discussion off the record.)

Mr. ONLY. Moreover, it is obvious to us that a very large part of the European share of these resources must go to pay for the kind of things which we could not, under any circumstances, pay for.

They have to supply the troops; they have to maintain the troops; they have to provide the facilities. So, a very large share of the resources which Europe can devote to military purposes over the next 3 years will have to go to nonhardware costs.

If you do a bit of arithmetic, and, of course, all of this is very rough, you will find that if we are going to make this plan work, the United States is going to have to carry somewhere a fairly substantial share of the cost, largely reflected in hardware manufactured in this country and shipped over to equip forces which they will raise and maintain.

Chairman RICHARDS. When you say "hardware," what do you include?

Mr. ONLY. I include tanks, guns, ammunition, and items of a peculiarly military type. I leave aside personal equipment, food, minor engineering equipment, such as shovels, and that sort of thing, mess kits that the troops have to have, petroleum to operate vehicles.

Mr. VOYTS. Would that not be like the \$34 billion they are presenting downstairs out of the \$60 billion armed services program?

Mr. ONLY. I believe, sir, that that \$34 billion—and I have to get a military witness to check me on this—includes a lot of things which would not fall into the category of hardware. It includes procurement, but not procurement entirely of what you call hardware.

That, I say, is subject to verification. Perhaps Mr. O'Hara can speak to that.

STATEMENT OF R. E. O'HARA, BUDGET OFFICER, FOREIGN PROGRAMS, OFFICE OF THE SECRETARY OF DEFENSE

Mr. O'HARA. I am O'Hara of the Office of the Comptroller. There is of the total \$34 billion of procurement in this appropriation estimate before the Appropriations Committee now between \$20 billion and \$30 billion which is actually hardware.

Mr. O'HARA. Which compares with the end items.

Mr. HERTER. How much was there in the 1951 appropriation?

Mr. O'HARA. Approximately \$22 billion, including supplementals.

Mr. HERTER. The total would be \$52 billion.

Mr. O'HARA. The 2 years, approximately \$52 billion. It does include, in addition to what we normally call hard goods, ammunition, which is sometimes also spoken of as semisoft.

(Discussion off the record.)

Mr. ONLY. You can see that what this program is doing is taking a bite out of a very large program, a bite which, translated into military terms, taking ground forces alone, will be sufficient to provide substantially for the equipment for those forces which the European nations will have in being by the end of calendar year 1952.

(Discussion off the record.)

Mr. ONLY. Considering the size of these total requirements I have given you, the urgency of meeting them at the earliest possible date and the long lead time involved in producing many of these items, running from somewhere from 8 to 18 months on many of them—that means you must place the contracts 8 to 18 months before the time that you expect to be able to deliver the things—the bite that we are taking out of the total program—that we are proposing for 1952—is much

too small. It is less than the program which the Joint Chiefs of Staff recommended.

(Discussion off the record.)

Mr. OHLY. The reason it is so small, and not substantially larger, is due to limitations in resources.

The judgment was reached, after examining these foreign-aid requirements, together with our own military program, that without a higher degree of immediate mobilization than is now contemplated American industry could not turn out more than we are proposing in this program.

(Discussion off the record.)

Mr. OHLY. We believe that the cost estimates we have now, although subject to fluctuations, represent a reliable order of magnitude. It is founded on information which has been gotten from sources in these European countries and a real consideration of those costs by the people in the Military Establishment.

I might say also that our economic program is smaller than we would wish it to be, smaller than it should be in terms of getting the maximum out of Europe and out of certain other areas.

But again we are up against limitations in resources, scarcities of raw materials, tools, industrial equipment. Mr. Bissell will talk to that point, and show you how the economic program was tied into this study of world commodities and other materials.

But, at the same time that I say it is too small, I want to say that as a result of these studies—the examination of our proposed program, together with our own military program—it is our conclusion that the program is feasible, that we have hit about the level that can be handled by American industry during the coming year. We have been advised by Mr. Wilson that, in his judgment, that is true. I should also say by way of caveat—and this is something on which I am speaking only for myself—that if we find as the year goes on that we have underestimated what American industry can do in the way of producing hardware, I would personally recommend a supplemental appropriation.

I say I am speaking just for myself. I view the matter of completing this total program as one of such urgency that, with the production lead times involved, that would be my personal position.

What is this program? I will just outline it very briefly before turning the presentation over to some of these other witnesses who will go into greater detail.

On the military side, the total aid is \$5.293 billion. That is composed of four principal components.

The actual cost of hardware comes to about \$4.8 billion. We propose to augment the hardware which we purchase by approximately \$100 million of excess material that we do not have to purchase, on the assumption that the Congress takes action on the excess-property amendment which has already been discussed in this committee.

The second item goes under the strange name of accessorial costs. That means the cost of packing, handling, crating, and transporting those things out of this year's program and out of previous military programs that will be delivered during the course of fiscal year 1952. That comes to, I believe, \$378 million.

I will verify these figures later for the record since I am rounding some of them out.

Training is \$30 million. This embraces three different types of operations: the training of European nationals in our schools in Germany and in the United States, the sending of mobile teams of experts to some of these countries to give them special training in types of weapons, such as the 90-millimeter anti-aircraft gun, jet aircraft, B-29's and the furnishing to these countries of a large amount of instructional material or training aids, such as mock-ups, training films and pamphlets, and all the other things that will aid them to spread training on the use of all the different types of items which we are furnishing down into the roots of their own armed forces.

Finally, included in the military figure is \$53 million for two purposes. One purpose is our estimated contribution to the central expenses of running the North Atlantic Treaty Organization, and particularly the expenses of operating General Eisenhower's headquarters, SHAPE. The balance is for the United States costs of administering the military side of the program.

I should say also that included in what I called accessorial costs is \$41 million for the activation and operation of depots needed to support the air side of this military assistance program.

On the economic side, we are requesting a total of \$1.675 billion, which I shall not try to break down, because Mr. Bissell will follow me in a few moments.

We are also asking that we have the authority to transfer up to 5 percent of the total amount requested for both economic and military aid backward and forward between the military side of this appropriation and the economic side. This will give us necessary flexibility and permit us to meet emergencies that we cannot foresee, because in this business we know that forward planning cannot be wholly accurate.

Moreover, if the opportunities for increasing European production through inserting a larger amount in the economic side of the program should present themselves we would like to be able to shift over a certain amount that would otherwise be used to procure hardware in this country.

To the extent practical, the program has been developed with the knowledge that the task of defending Western Europe will be facilitated if the assets of Germany, Yugoslavia, and Spain can be taken advantage of.

To some extent this is reflected in the program which we present to you. We have specifically programed economic aid for Yugoslavia and Germany. No military aid has been specifically programed for any of these countries; no specific economic aid has been programed for Spain. I would like to explain the reasons for these decisions.

No military aid has been programed because we cannot at this time say with any exactitude the precise requirements of the three countries we are talking about. However, we have included in this program a moderate sum which has not been programed to specific countries.

(Discussion off the record.)

Mr. ONLX. What we will do, if we receive this amount, will be to go ahead and procure the planned amount in items which we know are needed in Europe; they are needed in the North Atlantic Treaty area even though we have not programed them for specific forces.

We also know, if we can work out the association of some German forces with the North Atlantic Treaty forces, that they are going to need that equipment.

It is also true in the case of these other two countries.

So, we do have this unprogramed amount we could turn to if, as a priority matter, it seemed important to furnish some equipment to one of these other three countries, or to all of them.

I would also like to explain why no specific amount of economic aid to Spain has been included.

(Discussion off the record.)

Mr. OHLY. We do not know what the economic requirements of Spain are. We proceeded in this program of only including those things that we could definitely justify.

If a need arose to furnish economic aid to Spain as the year goes on, we would have to examine very carefully the economic side of the program, that is, the amount we are now requesting, to see whether there was any possibility of diverting amounts from that program to an economic program for Spain.

Our tentative judgment is that this will not be possible, because every cent of that \$1,650 million has been programed, and the only thing to do then would be to come in for a supplemental appropriation of some sort.

Mr. HERTER. When you say that that \$1,650 million has been programed, have the individual nations been told what it is being programed for in this bill?

Mr. BISSELL. They have by now, Mr. Herter.

Mr. HERTER. So each one is expecting that from the United States in their calculations?

Mr. BISSELL. They have been told very specifically and in the strongest language we could devise that these are illustrative sums, that obviously the total is not only conditional on any subject review by the executive branch, but obviously on congressional action. We also told them as far as the executive branch of the Government is concerned—I think in this respect we certainly speak for the whole Government—that since this aid would be conditional on specific performance of various kinds, and would be for specific purposes, that they could not count on it until we had discussed with them and negotiated with them the performance on which it could be conditioned.

Chairman RICHARDS. Go ahead, Mr. Ohly.

Mr. OHLY. I think there is only one more point to make. Having in mind the fact that we could not make specific provision for some of these contingencies, either on the face of the bill or in the sums we have requested in the legislation, we have suggested that the structure of the bill nevertheless recognize the likelihood that these problems will emerge.

We are proposing on the military side that the President have authority, upon a finding that this is necessary to the defense of the North Atlantic Treaty area, to extend military assistance to other countries in Europe which are not members of the North Atlantic Treaty, which would include Germany, Yugoslavia, and Spain.

(Discussion off the record.)

Mr. ONLY. We would want to consult with the committees of Congress before we took any of these moves, but we would like to have that privilege in the legislation.

On the economic side we would like the legislation to be so framed that unlike now economic aid could be extended to the countries in Europe even though they were not members of the Organization for European Economic Cooperation.

We know there is going to be a need for economic aid to Yugoslavia and we are proposing some \$60 million worth in this program. There may also be a need for additional economic aid to Spain. Yet we are not at all certain that we will want to or be able to work out with the other European countries, or with those particular recipients, their accession to the Organization for European Economic Cooperation. We would like to see them join in with this Organization, but aid may be required before such an arrangement can be worked out.

Mr. VORYS. There was no answer to Mr. Herter's question on the military aid, as to whether the nations had been told. Mr. Bissell answered the economic part of it. What is the answer?

Mr. ONLY. On the military side they have not been specifically told. We do not give them specific amounts of money, Mr. Herter. We are working with them day to day, and we have to give them some indication of the type and quantities of equipment we are thinking about.

Mr. HERTER. As I understand it, that is directly related to the manpower they are willing to furnish; the equipment is supposed to run parallel to that.

Mr. ONLY. That is right. As I said earlier, the ground equipment, for example, is supposed to, together with what they are going to produce, to take care of the requirements of forces that will be in being at the end of 1952. They will have to have some knowledge of that.

Chairman RICHARDS. I want to ask that we go around on the 5-minute rule. Finish your statement, sir.

Mr. ONLY. I have about finished my statement. Any way you wish to proceed will be satisfactory. However, I think if I ask Mr. Bissell and General Olmsted to go ahead you will have a more rounded picture against which to ask your questions.

Chairman RICHARDS. I do not know about that. You are giving an over-all picture. You are blazing a path here, and some of us may want to ask you some questions.

Whatever the committee thinks will be all right. Does the committee think we better go ahead with the economic statement before we enter into questions, and then let the team answer these questions?

Mrs. BOLTON. We can write down our questions as we go along.

Chairman RICHARDS. Have you finished your statement?

Mr. ONLY. Yes. I would like to turn the presentation over to General Olmsted, who will talk on the production feasibilities of the program, and then to Mr. Bissell. After that we would like to go through the countries one by one.

Chairman RICHARDS. There will be some over-all program questions. You can reply to those when we get there. All right, General Olmsted.

STATEMENT OF BRIG. GEN. GEORGE H. OLMSTED, DEPUTY ASSISTANT CHIEF OF STAFF, G-4, DEPARTMENT OF THE ARMY

General OLMSTED. Mr. Chairman, Mrs. Bolton, and gentlemen, I am going to have to ask your indulgence in order that I can give part of this from the seat here and part from the charts. If the show is not as well organized as you might like, forgive me because I cannot get the charts any closer to where I am right now.

I would like to tell you all briefly some of the practical facts of the military programing, which can be supplemented as you desire by the specific answers to specific questions which any of you may wish to ask.

I would like to cover in my remarks how the general program is made up, what has happened to 1950 and 1951 funds to date, what our general objective is in the armament program, and how far we will get along on that program with the 1952 set-up.

I would like to point out some of the problems involved, the cooperation we are getting in a general way from our allied countries, and what we desire, targetwise, in further cooperation from them as time goes on.

That is about the outline of what I propose to say.

First, how are these programs made up? It starts with a war plan, of course. There must be an over-all plan. General Eisenhower has such for his area. Then there must be an assignment of missions by country and by service. That has been done. Then there must be a force commitment; somebody has to put up the necessary forces.

Inherent in the force commitment is the phasing of those forces. How fast can they be raised and made available to the over-all commander?

Having that basic structure of information, it becomes relatively simple then to create or establish a military program, because we have for each type of military unit a table of organization and equipment.

If you say a corps artillery battalion, automatically we can say how many weapons, how much ammunition per weapon, and what the other auxiliary items of signal communication equipment, transport, and so forth, might be.

Having established our basic force commitments and the phasing of those forces, the question of programing becomes a relatively simple program.

The issue, however, where judgment enters into it is how much of these items should we provide from United States resources, and how much can the country or should the country be expected to provide from its own resources.

On that issue of judgment our system of screening, as we refer to it, is implemented first by our country level teams.

In 16 countries now we have military assistance advisory groups, Army, Navy, and Air, made up of extremely able officers, on the whole, and who work very closely with these people, with frequent meetings of the Ambassador for the political side, and the chief of the ECA Mission for the economic side.

They are in daily contact with the forces of these allied nations to see what the country can absorb, what the rate of absorption is to guide our delivery, what they might be expected to do for themselves, an actual examination of their budget to see if adjustments can be

made so they can do more without undue infringement on their civilian economy.

Then their composite judgment comes back here to be screened against the factors of (a) availability of dollars and (b) production facilities from which to make the delivery.

That is the process that has been followed in the 1950 and 1951 programs, and that is the process that is being followed now as we start into 1952.

If I may refer to the charts, I will show you where we are now on the 1950 and 1951 programs, Army only. My colleagues from the Navy and Air will be able to answer any questions on their respective programs.

Undoubtedly you have heard a great deal of discussion about priorities. While we are in a position of combat expenditures in Korea and the augmentation of United States forces, and just gradually getting under way the productive capabilities of our own production plant in this country, obviously there cannot be enough for everybody. So we start with guidance from the Joint Chiefs of Staff as to who gets the equipment in case of short supply.

(Discussion off the record.)

Mr. OHLY. Summarizing the 1950 program, it is our present belief that the deficiency now in the general-purpose vehicles can be fulfilled by September, and that as of September there will be on the way to our allied forces the entire 1950 program.

The 1951 program, as you remember, was broken down into two parts—the basic and supplemental. Much of the funds for the 1951 program were not finally made available to the services until this spring.

Almost all of the performance on the 1951 program has to come from new production. There is substantially little stock available for the fulfillment.

Our target for completion of the 1951 program is June of next year. As I will show you on a general chart, that will keep us abreast of the essential requirements of our allied forces as they are phased into activation.

We make a special point even though an item is in short supply of making the minimum necessary quantities available for training.

(Discussion off the record.)

General OLMSTED. What have we bought in the way of forces in being for our 1950 and 1951 program? These are NATO forces only and include divisions and supporting troops.

The 1950-51 program army totals just less than \$3,000,000,000. For the forces which are in being now, according to the phase program, the equipment which will be delivered to them by the completion of the 1951 program, which will be June of next year, will provide the major items of equipment for 28 divisions. If we measure the number of divisions we can have in our mind that our total American Army in the last war added up to something less than 100 divisions. These are the NATO forces only. I am not giving you any presentation today in respect to the very substantial forces we have in the other areas.

Our 1952 asking, procurementwise, was \$3,000,000,000—

Mr. VOYTS. These are just NATO; United States forces are not included?

General OLMSTED. That is right. These are the allied forces that are committed to General Eisenhower's command. They do not include the allied forces, and there are some, that are not committed to General Eisenhower.

(Discussion off the record.)

General OLMSTED. By the conclusion of this expenditure of a little over \$6,000,000,000 we will have created under General Eisenhower's command military forces from the allied nations substantially equal to the size of our Army at its peak in World War II.

Mr. BURLESON. May I interrupt the General there?

If funds for this program were reduced, would it then be necessary for you to revise your whole plan? Is that right?

General OLMSTED. That is right. I will answer that further when we get to this bar here.

This is the total number of forces committed to General Eisenhower's command, with a small gap here. For security reasons I have not put the exact number on there, but the chart is proportionate. This is where we would be through 1952's programs.

(Discussion off the record.)

General OLMSTED. That figure is subject to variation from several factors.

One, the rising cost of military equipment might raise it. On the other hand, our continuing desire to increase the self-help which these countries are doing in rather substantial measure now will tend to decrease it. So we are continually exploring the possibilities that these allied forces operating within their own areas might operate on much more austere levels of equipment than our American forces, who operate and must be prepared to operate anywhere in the world. That figure may be susceptible to some increase. It may, and we hope it will be, susceptible to some decrease.

All of these figures I am giving you relate to the initial equipment—the capital equipment. It is our hope, as I will discuss in a moment, that we can over a rather definite period now phase the maintenance cost over on the countries themselves.

Mr. RUBINOFF. Mr. Chairman, there is a discrepancy in one figure between Mr. Ohly and General Olmsted. Is it proper to get that now?

(Discussion off the record.)

Chairman RICHARDS. We will go ahead. There will be lots of questions they will want to ask you later.

General OLMSTED. All right.

Naturally, the question is in everybody's mind that if we do not appropriate money at this rate, what will be the effect on this program. Our answer to that starts with this perfectly factual presentation of what the reorder lead time is to get major items.

When we say "reorder" we mean a factory already in being and already producing cranes and shovels—how much ahead of the time that we expect to get a crane do we have to place an order with that supplier in order not to interrupt his line. Of course, tanks we are all familiar with, and tanks are a critical item.

If we told one of our present tank factories now we wanted to order a thousand more tanks than the ones he had already contracted for, by the time he gets his steel contract placed and lines up his subcon-

tractors it would be a number of months. Although his line is actually in operation now, it would be a number of months before we could expect the first tank from him. Therefore, the necessity of our having our funds well in advance of the anticipated or required date of delivery becomes a very real problem as we focus our thinking now on the fact that our end-item program is more and more going to be made up of these long lead-time items.

Mr. VORYS. Will you translate those last four into English?

General OLMSTED. I think you have me, Congressman. This is a little walkie-talkie radio—the one they give you, that the individual carries.

Mr. VORYS. Yes.

General OLMSTED. This is a ground radio. My recollection is it is unit equipment up to about regimental size.

This is an early warning radar.

If any of you experts back there say I am wrong about it, tell me afterward and not now. However, I am quite sure of those answers.

The question also arises if we have these funds, can we spend them? Can our existing production capacity without further impact on our civil economy produce the items we are asking for now in the 1952 program? I have taken out sample items out of the categories that make up approximately 85 percent of the Army procurement, and also have an Air Force chart designed to answer those questions.

(Discussion off the record.)

General OLMSTED. The 2½-ton 6 by 6 truck is another very important item. If we went to a multishift operation and we could solve the bottlenecks right now this would be the rate at which we would get trucks delivered. Because of that actual bottleneck this is the present rate of delivery from the suppliers. This is the way the truck requirements have been planned, with again United States forces through 1952 and MDAP through 1951.

We have programed in the 1952 program 9,779 trucks.

There is a very interesting fact. Originally the request totaled about 30,000. Many of these countries are now getting back into the position where they can make vehicles of their own. Although their vehicles for military purposes are not as good as our 6 by 6, we recognize that, and so do they. They can make a pretty useful military vehicle. After all, the German Army did fight a good war without any such vehicles.

So, we have rather forced these people to look to their own resources for transportation and cut about two-thirds of the vehicles required out of the program.

(Discussion off the record.)

Mr. FULTON. Why are the Services storing vehicles in the United States? There is certainly no threat of immediate attack here. We have the Pressed Steel Car Co. in my district in Pittsburgh, and I am advised indirectly it is full of truck equipment.

General OLMSTED. I do not know the specific answer to your question, but I do know this. The shortage of vehicles in Korea has been so great that we have had to extract some of them from the hands of the National Guard to send them there.

Mr. FULTON. I have been advised we have a whole vacant plant with vehicles side by side in the warehouse.

General OLMSTED. Are they completed vehicles?

Mr. FULTON. Evidently. There has been complaint to me about it.

General OLMSTED. Are they 2½-ton trucks?

Mr. FULTON. I do not know what they are.

General OLMSTED. Make a note of that. We will look into it.

Chairman RICHARDS. We will help Mr. Fulton in his district a little later.

Mr. FULTON. With regard to your over-all requirements, are your commands holding excess equipment in all over the United States? I am not talking about my district now, but are you holding a lot in this country, or are you moving everything out where you need it?

(Discussion off the record.)

General OLMSTED. Our vehicles are being shipped overseas not only for the full table of equipment of our forces there, but the ordinary reserve requirements, both combat and peacetime, that our logistical experiences through the years have indicated as being desirable.

We are not storing them for a war reserve in the United States, if that is what you mean.

Mr. FULTON. That is what I mean. You are complying with the priorities you have spoken about?

General OLMSTED. That is right. This is another artillery piece—the 105 howitzer. That presents a little different aspect of the same problem. Up until 6 months ago from our reserves from World War II, we had all of the 105 howitzers we thought we were going to need.

(Discussion off the record.)

General OLMSTED. Summarizing this, gentlemen, it is our desire to impress you with the fact that existing American capacity without further impact on our civil economy can meet the 1952 program and meet our delivery target of December 1952, which is abreast of the forces that are committed to General Eisenhower's command.

Mr. VORYS. I do not understand that chart. It says, "Date funds required to achieve schedule." What schedule?

General OLMSTED. If this production schedule is to be continued—and again, there is a question of lead time, Mr. Vorys—the funds should be available here, if this production schedule is to be continued as programmed. If the funds are delayed and the rate is reduced, then that will have a corresponding effect on the number of end-item aircraft that will be available.

Chairman RICHARDS. Is this as of today, that point?

General OLMSTED. Yes.

Captain ASCHERFELD. If I may make a statement there?

Chairman RICHARDS. Yes, sir.

Captain ASCHERFELD. You stated that the Navy had no problems in connection with the delivery of the 1952 program. That is true considering that we get the funds or contract authority by the first of September of this year.

Chairman RICHARDS. General, will you have a seat there now? Did you complete your statement?

General OLMSTED. I have just a very brief conclusion to make that might be helpful.

Mr. FULTON. On that chart who will build the plants to increase the possible existing capacity beyond the demand, from the middle of 1952 on? Somebody will have to be increasing the actual size of those plants when the demand goes down in order to increase capacity

further as shown by the chart. Is it intended the Government will build those, or what?

General OLMSTED. These are facilities in being. This does not presume the construction of additional plants.

Mr. FULTON. In the middle of 1952, though, you will see possible excess capacity going up in amount, regardless of your demand. What will cause that excess capacity to go up?

General OLMSTED. An improved flow of subcontracting and improvement of the availability of the skilled labor. It takes quite a little while to get one of these factories into motion, as you know.

Mr. FULTON. But there are no new plants there?

Mr. O'HARA. There is some additional tooling required for the new type of aircraft involved. There is specialized tooling to produce some of the new airplanes and new engines.

Mrs. BOLTON. Which involves the machine tool industry?

Mr. O'HARA. Yes.

Mr. OILY. It also reflects whether you operate on one, two, or three shifts. Once you have built your capacity up to a total capacity to produce, that is, once you go on three shifts, you can build that up.

Chairman RICHARDS. Let us go ahead now. After you finish your statement, we will have Mr. Bissell's statement. The committee is going to want to question you on the points that have been raised, and some other points.

I do not want to be discourteous to anybody on this committee, but we have decided on that procedure. I do want everybody on the committee to ask any questions they want of anybody.

General OLMSTED. I said I would also comment on our allied countries' present contributions, and what we would like to see happen from these contributions with some idea of target date, as to when we might think they would accomplish some of these things. I am not going to go into detail with each one, but I think it would be of interest to you all to know that France raised and equipped herself, without any help from us at all, seven divisions. I think that would be of interest to you, too, to see an example here that just came to my desk this morning of how our aid program integrates with actions that must be taken over a long period of time by the countries themselves.

Mr. HERTER. Might I interrupt for just a moment? I wonder if the general could indicate to us when he gives a figure of that kind whether it is a secret bit of information or whether it is public information?

General OLMSTED. I believe that figure has been published by the French themselves.

Mr. HERTER. It is a little confusing. Excuse my interrupting, but I think we ought to be clear as to what is secret and what is not.

Chairman RICHARDS. We are going to consider everything you said as being in executive session, General. In the absence of any statement on your part that this should be kept doubly secret it will be put in the minutes of the executive session and not revealed.

Mrs. BOLTON. Unless it is okayed for revelation.

Chairman RICHARDS. That is right.

Mr. VOYTS. It is hoped to have part of all this testimony published, is it not?

Chairman RICHARDS. Oh, yes. I should have stated that. After you have given this testimony, we want you to go over it and allow as much as possible as can be allowed to be used in debate on the floor of the House, because we need it.

General OLIMSTED. My good lawyer, Mr. Efron, will review the record, and I am sure his views will be generous about your problem there.

Chairman RICHARDS. All right, sir. Go ahead with your statement.

(Discussion off the record.)

General OLIMSTED. As a general statement—and with this I will conclude—we have now asked for and have gotten from all of our allied forces the capacity from them to program for themselves their own soft items, that is, their uniforms, food, their quarters, their pay, and the ordinary housekeeping equipment. We are no longer programming any of that sort of aid for our allies.

We have now advised our mission chiefs that we want these countries to become self-sufficient on the question of spare parts and ammunition, which represent, respectively, about 20 percent each of the total portion of the program.

Many of these countries can make their spare parts, and all of them can make ammunition up to, say, midrange, or midsize artillery. For those who cannot, we are telling them, "You had better get yourself in a position to buy these things from us rather than to expect them as a continuing grant aid."

We believe as a general thing that we can get these allied forces self-sufficient on the question of spare parts, which is important because of the continuing expense burden, as well as on ammunition which is very important for the same reason, plus the fact that ammunition is a huge tonnage item in the event of war.

On the shorter lead time items which come forth in our priority toward self-sufficiency for these countries—I am talking now about rifles, machine guns, and mortars—almost all of our European and Mediterranean allies now are making their own rifles. Most of them are making their own mortars and machine guns. Many of them are making their lighter signal and engineer equipment. That is the next category toward which we want to see them achieve a self-sufficiency.

On the longer lead time items, like the heavier items, which is the final category—and there I am speaking chiefly of heavy artillery and heavy engineer equipment, as well as the more complex electronics equipment, and tanks, airplanes, and vessels—on those things for the foreseeable future it may be more economic in our common defense program for us to plan to make those here. It may be possible, and it will in some cases be possible, for us to effect the transfer as a cash sale. But from the standpoint of construction and the desirability of trying to go into the construction of heavier items, where the facility itself might not be usable until 2 or 3 years from now, while the area over there is as sensitive as it seems to us, it may make more sense to do it here.

That, in essence, is our program toward getting our allies to a state of self-sufficiency, and that is our time target as nearly as we can give it to you.

I would say in our decision now about the 1952 program that a material change will invite a series of disruptions of commitments that have already been made to us by our allies. It will open the door to give them an opportunity to do less themselves because of the claim, "Why organize a tank battalion, or why create an armored division, if the equipment is not going to be available?"

I would say in our own self-interest for the over-all period of military danger in which we are, between now and the time when we actually get strong—in our own self-interest or in the interest of attaining self-help from these countries, the speed of accomplishing this program is important.

Chairman RICHARDS. Thank you, sir. We will want you for questions later, so you will be available, will you not?

General OLMSTEAD. Yes, sir.

Chairman RICHARDS. Mr. Bissell.

STATEMENT OF RICHARD BISSELL, DEPUTY ADMINISTRATOR, ECONOMIC COOPERATION ADMINISTRATION

Mr. BISSELL. Mr. Chairman and members of the committee. I think the most useful thing I can do for the committee today will be in the nature of answering questions, and I will try, therefore, to spare generalities as much as I can, and I will be very brief in this regard.

You have had rather extensive testimony already on the need for some economic support of these European countries next year. I want to address my remarks to two or three questions that seem to me unanswered or inadequately answered in the preceding testimony.

From the nature of this subject I think many of your questions will have to do with specific countries, and the indicated needs for them, and the specific circumstances. In talking about the problem as a whole I cannot be, therefore, as specific as I would like to.

The first question to which I wish to address my remarks is the relationship between what is called, and here referred to, as economic support for rearmament—a continuation of economic aid and the actual process of rearmament itself in the European countries.

In the last 2 years under the MDAP legislation one of the forms of military aid that has been provided by the United States has been the financing of raw materials, components, machine tools, and the like, that were destined to go directly into military production in allied countries.

As you know, what we are proposing for next year is a different procedure than that. We are proposing, in effect, that we should provide such aid for that same purpose, but not limited to the financing of raw materials and equipment that can be identified as going into military production. Instead, we are proposing that there should be a continuation of some economic assistance, administered as it had been by the ECA in the past.

I think in a way the central question—the central point I would like to try to make clear to you is the relationship between that need for economic assistance and rearmament in any one of these countries.

Very briefly, the process we have gone through in assessing this need and the considerations out of which it grows I can put as follows:

In most of the countries of Europe—the notable exceptions are Italy and Germany, and on a small scale Belgium—there is full em-

ployment today, or pretty near full employment of the labor force, and a fairly full employment of all industrial and other productive facilities as there is in the United States, and as there was really, or very nearly in this country, when our rearmament program started in earnest last summer.

We expect that those countries, as our allies and as members of the North Atlantic Treaty Alliance, will increase their total military expenditures from approximately \$7,500,000,000 this year to a little over \$11,500,000,000 next year.

Those figures I am giving you are for all of the Marshall plan countries and go beyond the North Atlantic Treaty countries themselves.

That additional military expenditure out of their own budgets—and expenditure for the most part within the countries themselves—is a measure, of course, of an added economic load on them. To understand the relationship between their need for external aid and any such added load, it is, I think, important to follow through the impact that these expenditures, and especially these increased expenditures, will have on each of the European countries.

It will, of course, require the employment of substantial additional people, both in the military services themselves and in the military production. That need will be met in part by fuller employment of people already employed in part; drawing the unemployed into employment in countries like Italy and Germany; and in part by diverting manpower from civilian to military production.

If the expenditures are to be made and the production is to be accomplished, it is also going to be necessary, of course, to divert other economic resources, notably industrial and other productive facilities. It will be necessary to use substantially increased amounts of raw materials. Furthermore, foods, raw materials, and other goods, will be directly consumed on a larger scale by the armed services themselves.

Almost all of these countries are dependent on their foreign trade to a very much greater extent, of course, than is the United States. In a small country like Belgium there is a dollar of imports for every \$3 of the national income, and a similar amount of exports. Naturally, therefore, as the process of rearmament absorbs manpower, productive facilities, raw materials, and commodities in larger and larger volume, these countries will have to import more goods for rearmament purposes, and there will be a diversion of economic resources away from the production of exports and the rendering of services that earn foreign exchange resources for them.

It is through that chain of causation that larger military expenditures within the country increase their need to bring in and to buy goods and services elsewhere in the world and reduce their capacity to sell goods and services, and thus to earn funds or money elsewhere in the world.

It is to meet that situation that it is proposed that they should be supplied with economic assistance. I think it is probably—and we can make a rough calculation of this—that in every one of these countries the amount of economic assistance that is proposed to be furnished will be less than sufficient to finance the commodities, the machine tools, the equipment, the raw materials, the services, that

they will have to import from abroad to put directly into military production. I believe, therefore, that if we were to limit our financing to those imported goods and services that do go identifiably into military uses, we would come out with figures somewhat larger than those before you, although we have not made a precise calculation.

Naturally then, the question arises, why we do not in fact use the procedures that we have employed in the past under the military defense assistance program--the military aid program--rather than the procedures that have been employed in the furnishing of ERP or Marshall-plan aid. I think the answer to that question is that we are concerned, and we must concern ourselves, with the total resources of these countries; with the uses to which they put not only the resources that they are enabled to buy with our financing and with funds that we provide them with, but also their own resources.

I use the word "resources" here to include not only the goods and services they import from abroad, but also their own domestic resources; the use of their own manpower and their industrial facilities, and goods that they produce domestically.

If I may try to drive home this point, if we were next year, with such material as copper or aluminum, to take the position that we would finance only that part of it that identifiably goes into military end uses within the receiving country, and if we were to concern ourselves only with the use made by the country of the goods we finance, it is quite possible that there could be a diversion of copper secured from other resources; of copper or aluminum produced domestically or produced in the country's own colonies, to uses that we would regard as low priority.

The wastage of resources against which we feel we must be on guard, could occur, and our narrow controls over the goods that we finance would be quite inadequate to achieve the purposes we have in mind.

Therefore, it is our belief that broadly the principle that must be applied next year in the administration of economic support, whatever the details of its administration, the broad principle must be that we must insist on what we regard as a satisfactory and appropriate use by these countries of the whole of their economic resources; their own indigenous resources and goods and services that they import from abroad. We must not confine our examination and our conditions merely to the goods that are financed by the United States.

Given that need for agreement with the countries on the whole of what they are doing, and on the use of all of their resources, there are very great advantages of a purely administrative and mechanical nature not to limit dollar assistance or economic support to the financing of goods and equipment that can be traced through to military end uses.

In effect, what I am saying is that we propose and we feel what is necessary is a broader and more comprehensive and more exacting condition applied to any economic support than the condition that would be applied if we satisfied ourselves merely as to the end use of the particular goods that we financed.

I want not to raise still a third question which has come up in previous discussions of the committee, which I think can be put in this form. It is perfectly clear that some of the economic aid that is

proposed in this legislation before you is not to support rearmament in Europe. It is for recovery purposes of exactly the sort to which the Marshall plan has been directed in the past.

I think the committee has evidenced some interest in the extent to which the economic support that is here proposed could be said to be a continuation of the Marshall plan and the extent to which it is properly, and in the sense in which I have just been describing it, economic aid that is made necessary by and is in support of rearmament.

I am going to give you some figures on that and give you the best answer with it, or the best type of answer that I think can be given to the question.

Chairman RICHARDS. Just 1 minute, please. Mr. Bissell, I hate to interrupt your train of thought, but if you were going into the figure end of it, I thought that this would be a good place to do this.

I would like to say for the information of the committee that the widow of our beloved departed chairman will be sworn in here rather soon after the prayer. I want to go down, and maybe some of the other members would like to be on the floor at that time. If so, I think we should take a 15- or 20-minute recess. I would like to hear your opinion about that.

If you do not want to go down and you would prefer that I just go down, it will be all right. I would like to hear whatever you say about that. Some of the members will want to be there, and all of us would hate to miss Mr. Bissell's testimony, I am sure.

Mr. VOYSE. Mr. Chairman, very promptly on the floor this afternoon, important matters will come up. I think we should be there.

Chairman RICHARDS. I was going to mention that. There are certain features of the bill, or certain parts, in which the members are interested for one reason or another. I was going to ask the committee's wishes about that, and about postponing an afternoon session until the bill is completed. I think most of the members will want to be on the floor for that.

I do not want to interrupt these hearings for any purpose that is not worth while. What does the committee think about that? I thought it was a good place right when Mr. Bissell was going into his figures to raise those questions. Do the members think they should be on the floor this afternoon?

Mrs. BOLTON. Yes, sir.

Mr. JAVITS. We will be needed, Mr. Chairman.

Chairman RICHARDS. There is no contrary opinion to that?

(No response.)

Chairman RICHARDS. All right. This matter will be brought up right after Mrs. Kee is sworn in, I think we should have a recess right now until the business we are talking about is completed on the floor this afternoon.

Mr. Bissell, could you and the other witnesses be available around 2:30? I think we will finish it then.

Mr. BISSSELL. Yes, sir.

Chairman RICHARDS. If we are not through by then we wish you would wait around until we can return.

The committee will stand in recess until 2:30.

(Whereupon, at 12 noon the committee adjourned until 2:30 p.m. of the same day.)

(The scheduled afternoon meeting was canceled because of urgent business on the floor of the House.)

NIGHT SESSION

(The committee met in the House Foreign Affairs Committee room, the Capitol, at 7:30 p.m., Hon. James P. Richards (chairman) presiding.)

Chairman RICHARDS. The committee will come to order, please. We will continue hearings on the mutual-security program. The first witness we have tonight is Mr. Dudley B. Bonsal, of the Association of the Bar of the City of New York.

Mr. Bonsal, will you have a seat, please, sir?

**STATEMENT OF DUDLEY B. BONSAI, APPEARING ON BEHALF OF
THE ASSOCIATION OF THE BAR OF THE CITY OF NEW YORK**

Mr. BONSAI. Mr. Chairman, thank you, sir.

Chairman RICHARDS. Mr. Bonsal, do you represent the Association of the Bar of the City of New York?

Mr. BONSAI. Yes, sir.

Chairman RICHARDS. Have you a prepared statement?

Mr. BONSAI. I have forwarded to the clerk the 35 copies of the report of our association, on American investments abroad which was approved by the association on March 13, 1951.

In addition to that I prepared very roughly a few remarks I would like to make, addressed to this report, if I may, and I would be glad to leave the draft with the clerk when I conclude.

Chairman RICHARDS. We have distributed the printed report to the members, and without objection the entire draft of your remarks will be included in the record and you will be able to testify in your own way as to any other statement you wish to make.

(The report of the Association of the Bar of the City of New York entitled, "Report on American Investments Abroad," is as follows:)

REPORT ON AMERICAN INVESTMENTS ABROAD

**Report of Committee on Foreign Law and Committee on International Law;
Association of the Bar of the City of New York**

INTRODUCTION

This report is the joint effort of the association's foreign law and international law committees. The primary responsibility of the foreign law committee has been to indicate the kind of legal protection which American enterprise seeks when it goes abroad and the legal impediments found abroad which have a restricting effect on the flow of American capital. The primary responsibility of the international law committee has been to suggest methods by which the Government of the United States can seek the gradual elimination of the more important restrictions on American investment and undertake other measures designed to encourage American enterprise in and the flow of American capital to foreign countries. Your committees are of the opinion that it is not in the province of the association to question or criticize the foreign economic policy of the United States as it has been laid down by the President and the Department of State. However, the association can serve a useful purpose in pointing out legal obstacles to the carrying out of our foreign economic policy and in suggesting methods by which that policy may be furthered.

It cannot be expected of course that all of the obstacles below enumerated on American investment abroad can be removed, for a long time to come. How-

ever, to the extent that these restrictions are removed or alleviated, it can be expected that American private enterprise can and will do a better job in increasing world production and developing sound economic relationships. The so-called point 4 program was designed not as a program to commence operating in an ideal world, but as a means of bringing about order and stability by increasing production in those parts of the world where development lags. The attainment of this objective requires the cooperation of private enterprise and we cannot wait until all outstanding legal issues are settled, nor until political conditions satisfactory to American investors obtain throughout the world. Finally, it must be recognized that social systems differ according to the capacities and traditions of peoples, and that American private enterprise must not expect to change these systems.

STATEMENT OF FOREIGN ECONOMIC POLICY AND PRINCIPLES GOVERNING INVESTMENTS ABROAD

The foreign economic policy of the United States encourages private investment of American capital abroad. This is dramatically emphasized by the point 4 program for assistance to underdeveloped countries. The protection of American investments abroad becomes consequently of ever-greater importance, not only to the investor concerned, but also to the success of the foreign economic policy of this country.

Principles governing such investments are—

1. Foreign enterprise should have the right to manage its business.
2. Foreign enterprise should receive treatment not less favorable than that accorded to local enterprise. Minimum standards of fair treatment should be observed.
3. Foreign enterprise should be assured of the withdrawal of earnings on capital investment within reasonable limits and of the convertibility of such withdrawal.
4. Foreign enterprise should be protected against expropriation except in the exercise of paramount public policy in which event any expropriation should be accompanied by adequate and prompt payment of compensation to be determined in fair and speedy proceedings.

IMPEDIMENTS TO AMERICAN INVESTMENTS ABROAD

There are a variety of measures of foreign governments which interfere with sound American investment. Their discriminatory and even confiscatory character is not always obvious. Sometimes legislation is unsatisfactory, but more often its application in practice becomes harmful to the interests of the foreign investor.

For any consideration of remedies through diplomatic protection by bilateral treaties, other agreements, or international agencies, it will be necessary to investigate the legal character and effects of possible obstacles to American investments abroad under foreign law or practice.

Impediments to American investments abroad may be found in the terms of the application of the following:

I. Right to engage in business in a foreign country:

(a) Direct prohibition against foreign investment in certain fields, e. g., in industries considered strategic, and in real property.

(b) Licensing of new enterprises:

(i) Direct licensing in countries where no new enterprise, whether domestic or foreign, will be allowed except with a license from the appropriate authorities; it is probable that such type of licensing will be of great importance in any Socialist state where "planning" is considered important, in order to forestall investment in uneconomic or "luxury" enterprises.

(ii) Indirect methods of licensing, such as the withholding of labor permits for the foreign personnel necessary to establish or maintain an enterprise, health requirements such as those sought to be applied in France against Coca-Cola, zoning and other requirements with respect to the location of industry, etc.

(c) Laws or regulations with respect to the establishment of branches by foreign corporations.

(d) Obtaining exit permits for foreign personnel. This, it is understood, has been quite a problem in Communist China, where, in effect, foreign personnel have been held as hostages.

II. Form of organization, ownership, and management of local corporations, in which foreigners have an equity interest:

(a) Requirements that a certain proportion of the directors and managers of the corporation be nationals of the foreign country.

(b) Requirements that a certain proportion of the stock of the corporation be owned by nationals of the country concerned; this type of restriction may be of considerable importance if there is a shortage of available capital for investment in the country, so that the participation of national interests is difficult to obtain.

(c) Limitation on the voting power of (foreign) majority stockholders.

III. Taxation:

(a) Tax laws where income of enterprises as a whole, including income earned outside of the country involved, is subjected to taxation by the country concerned.

(b) Problems in connection with the taxation of such corporations, i. e., existence of withholding taxes on dividends, etc.

(c) Effect of the internal tax structure of the country concerned on the enterprise ("more burdensome taxes").

IV. Control of foreign exchange:

(a) Limitations on remittance of earnings, under regulations of general application or those which are applicable only to specific industries, such as the English requirements with respect to the remittance of the profits of exhibition of American motion pictures (under which a portion of the earnings must be reinvested in the country).

(b) Restrictions upon imports necessary to the business of the foreign owned enterprise or upon payments therefor.

(c) Exchange controls affecting the right to withdraw in dollars or other foreign currency (convertibility) either the amount of the original investment or profits accrued thereon.

V. Labor:

(a) Labor and immigration regulations, e. g., requirements that a certain proportion of the employees be natives of the country involved, and extension of this requirement into the category of resident agents, traveling salesmen, and managerial personnel.

(b) Prejudicial labor union practices and laws with respect thereto; this may be important in cases where a large American company in a relatively undeveloped country is by far the largest employer, e. g., the United Fruit Co. in Guatemala, which it is understood, is the target of "general laws" applicable to all employers of more than a given number of employees; or the position of the American oil companies in Mexico prior to expropriation, when they were objects of unrealistic wage demands from their unionized employees, backed by the Government.

VI. Conduct of judicial and administrative proceedings:

Courts and administrative agencies prejudiced against the "rich foreign corporation."

VII. Subsidies and other discriminatory protection to national competitors.

(a) Subsidies to industries owned by nationals or other protection granted to national competitors of American or other foreign enterprises (export subsidies).

(b) Other governmental interference in current management of the enterprise, for example, the price control and rationing system, if any, which could be applied to put the foreign owned enterprise at a great competitive disadvantage, especially if imported materials are involved.

VIII. Laws and regulations relating to the recognition or protection of patents, trade-marks, copyrights, and other industrial property rights.

IX. Taking of property:

(a) Imposition of fines and retroactive taxes in order to reduce the effective proceeds that can be withdrawn in case of liquidation.

(b) Condemnation for a public use and other forms of "involuntary transfer" of assets.

(c) Appropriation of foreign assets by the governments concerned when subsidiaries of American companies registered under domestic law are considered "nationals" whose assets may be marshalled or vested.

(d) Nationalization of an industry on a nondiscriminatory basis, e. g., England and France.

(e) Confiscation on a discriminatory basis (this category may well be partially coextensive with category (d) above); the best example of such

proceeding being furnished by the satellite countries of Eastern Europe where proof of violations of criminal law is obtained through, for example, confessions of espionage, etc., in order to deny foreign investors the right to compensation.

(f) Effect of nationalization on debt claims owed to foreign investors, e. g., the recent Czechoslovak nationalization law which permits the Government to cancel the "economically unjustified debts" of a nationalized enterprise.

X. Inadequacy of compensation on nationalization or other taking:

(a) Is it sufficient that the foreign investor is given the same treatment as the native investor (minimum standard)?

(b) Is compensation adequate if given in long-term Government bonds or in long-term bonds of the nationalized industry, interest being dependent upon earnings?

(c) Is the procedure for determination of the amount of compensation and its valuation adequate?

(d) Is participation of representatives of the American investors in such proceedings assured, both on the domestic and international level (special arbitration)?

METHODS BY WHICH LEGAL OBSTACLES TO AMERICAN INVESTMENT ABROAD MAY BE REMOVED OR ALLEVIATED

Bearing in mind that conditions considered ideal by investors are not likely to be fully attained, nevertheless the following proposals would, in the opinion of your committees, facilitate American investment in foreign areas:

1. The negotiation of bilateral investment treaties, having as their purpose the elimination, where practicable, of the impediments above mentioned, and giving assurance that in the event of expropriation American enterprise will receive prompt, adequate and effective compensation and will have recourse to an appropriate international forum to enforce its rights thereto.

2. Recognition in our own tax laws that income from new investments under point 4 should be taxed in the country of investment rather than in the country from which the capital proceeds, and application of this principle to income earned abroad by American citizens for personal services rendered under point 4 while abroad, regardless of the length of the duration of the service. A supplementary proposal would be a more liberal depreciation allowance for American investment abroad predicated on the greater risks involved.

3. Expanded programs through the United Nations and Intergovernment programs in fields of health, sanitation, education and food supply, and other fields not adapted to private enterprise, designed to raise the standard of living in underdeveloped countries, as being one of the most effective ways to improve the investment climate.

4. The creation of a new international private financing facility designed for the purpose of stimulating foreign investment and assuring the private investor of currency convertibility.

Your committees present the following resolutions and move for their adoption:

Resolved, That the Association of the Bar of the City of New York, mindful of its responsibility to assist the Government in accomplishing the aims of its foreign economic policy, confident that the private-enterprise system provides the most practical known way of attaining the objectives of that policy, and believing that the encouragement of American investment abroad is an important means to world peace and stability and to insuring our own national security, approves the foregoing report; and further

Resolved, That the president of the association be requested to present the report and these resolutions to the Secretary of State.

Respectfully submitted.

Committee on foreign law: Dudley B. Ronsal (chairman), Dana Converse Backus, Theodore R. Black, Peter Borie, Otis B. Rosworth, Hobart L. Brinsmade, Elliott E. Cheatham, Charles W. Crawford, Martin Domke, Phaulor J. Eder, John Noble, Jr., Angelo Piero Sereni, Paul Smith, Jr., Otto C. Sommerich, Letitia A. Tedeschi-Sant'Agata, Robert F. Weissenstein.

Committee on international law: A. A. Berle, Jr. (chairman), Murray O. Bernays, Joseph L. Broderick, William Tucker Dean, Jr., Henry P. deVries, Thorold J. Deyrup, Samuel E. Gates, William E. Jackson, Dorothy Kenyon, W. Lawrence King, Jr., Parker McCollister, Paul V. McNutt, A. J. Gustin Priest, Seymour B. Quel, Louis Waldman, René A. Wormser.

FEBRUARY 14, 1951.

Mr. BONSAL. Thank you, Mr. Chairman.

First of all, I would like to express on behalf of the Association of the Bar of the City of New York our appreciation of being invited to appear before the committee.

While our association is not, of course, in a position to speak with regard to the military-aid features of the legislation before you, it is interested in that part which deals with economic aid, to which subject I will confine the few remarks which I have to make.

Our interest in the economic-aid program is not so much the amount involved, although as taxpayers we are deeply concerned that the program be carried out on the most economic basis possible. Our primary concern is the manner in which such economic cooperation with other countries is to be carried out.

We realize the need for the emergency program envisaged in the legislation before you, but urge that in the longer run the job can be done largely by private enterprise with a minimum of Government spending.

On March 18 last the association approved a report on American investments abroad, which was prepared by the association's committees on foreign law and on international law.

As the chairman has stated, copies of this report have been distributed to you.

This report deals with the role of private enterprise in foreign investment.

In our report you will find listed on page 128 a statement of principles which we feel should govern investment abroad. Thereafter we list a large number of impediments which private enterprise has found in making investments abroad, and which have acted as a deterrent, and in some cases made foreign investment impossible in some areas.

Then we suggest on page 131, under the heading, "Methods by which legal obstacles to American investment abroad may be removed or alleviated" four different ways by which we think this can be accomplished.

Of course, private enterprise does not expect that all of the obstacles to American investment abroad will be removed for a long time to come. However, we are convinced to the extent they are removed or alleviated American enterprise will be encouraged to increase its investments abroad in support of our Government's foreign economic policy, and in support of the struggle to raise the standard of living of underdeveloped countries to the point where they will join with us in the battle of freedom.

The methods which we propose are the following:

1. The negotiation of bilateral investment treaties, having as their purpose the elimination, where practicable, of the impediments above mentioned, and giving assurance that in the event of expropriation American enterprise will receive prompt, adequate and effective compensation and will have recourse to an appropriate international forum to enforce its rights thereto.

2. Recognition in our own tax laws that income from new investments under point 4 should be taxed in the country of investment rather than in the country from which the capital proceeds, and application of this principle to income earned abroad by American citizens for personal services rendered under point 4 while abroad, regardless of the length of the duration of the service. A supplementary proposal would be a more liberal depreciation allowance for American investment abroad predicated on the greater risks involved.

3. Expanded programs through the United Nations and intergovernment programs in fields of health, sanitation, education, and food supply, and other fields not adapted to private enterprise, designed to raise the standard of living in underdeveloped countries, as being one of the most effective ways to improve the investment climate.

Mr. Chairman, that is a form of investment that we in our association feel must be a Government investment, but it can do a great deal to improve the general picture by encouraging private enterprise to go abroad.

4. The creation of a new international private financing facility designed for the purpose of stimulating foreign investment and assuring the private investor of currency convertibility.

I happened to be in Germany last week and hitch-hiked a ride from Konigstein to Frankfurt. It happened that my driver came from South Carolina, Mr. Chairman.

Chairman RICHARDS. He was a good one, then.

Mr. BOXSAL. He was a good driver and a very nice fellow. He was a young lieutenant who had come to Germany in 1945 and stayed with the occupation more or less ever since.

He told me there was no question among our soldiers as to what they had been fighting for, or what they might have to fight for. Having seen at first hand what happens to a people who have sacrificed their freedom, there was not the slightest doubt in his mind or in theirs that our way of life was worth fighting for, whatever the sacrifice.

What did bother my friend in Germany—and he told me it bothered some of his friends—was the danger of losing at home the battle which we seek to win abroad. You gentlemen are trustees for all of us, to see that this does not happen.

It seems to our association that the greatest contribution to the preservation of our way of life will come about through sharing our own ideas, and our own freedom, including the freedom of initiative, with others. Here we hope that private enterprise will be allowed to play its proper part. There is no reason to believe that we can help our cause by building government-dominated economic systems abroad when we do not believe in doing so at home.

We recognize that Government spending for foreign economic aid is necessary during a period of years of great international stress, such as we are now going through. Also, that Government spending in small amounts on a cooperative basis with other countries may be advisable on a more or less permanent basis in limited fields of basic economy development not adapted to private enterprise, such as health and sanitation, and the other fields I have previously mentioned.

I would like, therefore, to express the hope of the association that in considering the important legislation before you you will give due regard to the role which private enterprise can and wants to play.

We urge that recognition of the importance of its role be continually stressed in all legislation dealing with economic aid.

Only in this way will the other countries understand, first, that we believe in private enterprise; secondly, that our Government aid is temporary and that their own economic well-being will be greatly enhanced if they give private enterprise a fair break.

One final comment, Mr. Chairman. In the bill, as I understand it, pending before the committee, there is no reference to the role of private enterprise at all. I think our association would feel very strongly that it is both practical and useful to continue to stress the role of private enterprise. It is too easy for the foreign countries to accept Government money—to get on the payroll. But in the long run I do not think it can do anything but spell disaster to us if they do.

Thank you, Mr. Chairman.

Chairman RICHARDS. Thank you very much, Mr. Bonsal, for that statement. You have brought out a point there that we have been thinking about for a long time in this committee, and have acted upon rather weakly on one or two occasions. Mr. Vorys here is a specialist on the guaranty business. He has been raising Cain about that a long time.

What do you think as to how far the guaranties should go to encourage private enterprise? Convertibility and what else?

Mr. BONSAI. I cannot speak for the Bar Association of the city of New York on that, Mr. Chairman. My own view is that a guarantee—if you have a guarantee at all it should be limited to convertibility. I think a guarantee that goes any further may encourage the wrong kind of a fellow to make the investment, or else it raises a temptation to people doing these things not on a normal job basis at all, but just because somebody else is going to bail them out.

I have personally never been awfully keen on guarantees except to insure convertibility, which is something completely beyond the control of the fellow making the investment.

Chairman RICHARDS. Thank you, sir.

Mr. Vorys.

Mr. VORYS. You have a very interesting and helpful statement, Mr. Bonsal. There are some of us who, if the choice was between a giveaway and guarantees, would prefer guarantees.

Mr. BONSAI. I would agree with that, Mr. Vorys.

Mr. VORYS. That would be in the ECA territory. But for the rest of the world, where the choice is between guarantees and ordinary business transactions, we preferred business transactions. Maybe we were not consistent, but our position in urging the use of guarantees in the European recovery program was that by that device even if the Government had to meet the guarantees, we ended up with the foreign currency, and it was ours.

Mr. BONSAI. Yes.

Mr. VORYS. Whereas under the grant system with counterpart the other country ended up with the currency and we had merely a veto power on how it should be used. I believe, though, you have paid your respects to the idea of whether we should plan for a permanent plan of aiding all these countries by grants.

Mr. BONSAI. Well, I think on that, Mr. Vorys, that there are certain basic economy fields where it does seem to me with my limited knowledge that it can be useful, providing it is cooperative and it is not a

Santa Claus arrangement on our part, and that they do their share.

I do know, for instance, that a number of the health and sanitation programs we have carried on have turned out very successfully. I think Brazil is a case in point, where we have started putting in the lion's share, and I think that now Brazil is putting in by far the lion's share, and the results have been very good. However, I do not think those things should be expensive, and I think they should be pretty limited.

Mr. VOYTS. I agree with you. Thank you, Mr. Chairman.

Chairman RICHARDS. Mr. Mansfield.

Mr. MANSFIELD. Mr. Bonsal, I have no questions, but I am delighted that you are appearing before this committee and have given us the views of the Bar Association of the city of New York. I was especially pleased with your last statement, because what you say in effect is a good word for the point 4 program, which had its genesis in the very type of cooperative programs you mentioned in Latin America.

I think the record will bear this statement out, that not only in Brazil, but in the major portion of Latin-American countries wherein this program has been operating for the past 11 or 12 years anyway, that now a greater proportion of the expense is being borne by the so-called recipient countries of Latin America.

I have always felt that this facet of our foreign policy was perhaps the best one in the whole lot because it was cooperative. It was not a give-away, but it was something that was mutually beneficial to the participants.

Thank you very much, Mr. Bonsal, for a fine statement.

Mr. BONSAI. Thank you, Mr. Mansfield.

Chairman RICHARDS. Mr. Bonsal, I will now turn you over to the tender mercies of your kinswoman here. We think a lot of her, and that is a pretty good recommendation in itself.

Mr. BONSAI. We think a good deal of her too.

Chairman RICHARDS. Mrs. Bolton.

Mrs. BOLTON. It is good to see you.

In your fourth point you say,

The creation of a new international private financing facility designed for the purpose of stimulating foreign investment—

Could you give us just a little brief outline of what you mean by that and what you envisage?

Mr. BONSAI. Well, years ago there was talk of an Inter-American Bank which was to accomplish this. I think that was before the last war.

Mrs. BOLTON. By "Inter-American" you mean in the new hemisphere?

Mr. BONSAI. Yes. In the new hemisphere. It never bore fruit. We felt, and I think particularly Adolph Berle, who was Chairman of the International Law Committee, felt particularly strongly on this, that you provide a mechanism for foreign exchange through such a bank, which is something that could take the place of the guaranties, assuming that the bank function could operate and that they have a variety of currencies. At the same time the bank might be in a position to give credit to projects, particularly to projects where on a three-cornered trade relationship they could come out, whereas an individual might not come out.

We really never worked it out in detail, Mrs. Bolton. Perhaps we should have, but it was just the thinking in the back of our minds.

Mrs. BOLTON. Thank you very much.

Chairman RICHARDS. Mr. Burleson.

Mr. BURLESON. I have no questions, Mr. Chairman. Thank you.

Chairman RICHARDS. Mr. Judd.

Mr. JUDD. Mr. Bonsal, you said that you thought Government guaranties ought to go only to the extent of assuring convertibility, but are not the political uncertainties in these countries perhaps an even greater deterrent to the right kind of investments abroad? You would not favor providing guaranties for reimbursement in case of violence by mobs or riot, for example?

Mr. BONSAI. I think this, Dr. Judd: That American investments have been going on a long time. I think American businessmen by and large will take their chances on a good deal of political uncertainty. They have had it before. However, there is one thing they do want, and that is if their properties are expropriated or swiped by the foreign country, they want to be compensated, and I think they are entitled to be. They feel that very strongly.

That is why, as you noticed, we put in a point on that.

With that I think they will take a lot of chances on political instability, because the whole effect of this thing is to create more stability, and that is what they are trying to do.

Mr. JUDD. Of course, that has not been our experience. I think the major reason is that while businessmen have been willing to take these chances in the past, the situation they face now is not the situation they faced in previous years.

Mr. BONSAI. That is true.

Mr. JUDD. There were always the hazards of possible violence in an underdeveloped country, but now you have an organized worldwide conspiracy whose business day and night is to create these uncertain conditions. Thus you have the regular hazards which have always been there, and which are formidable, plus an organized diabolically clever and determined effort to make you fail.

We in this committee, when we wrote those guaranty provisions, thought we ought to get a tremendous response, but we found out differently and we have been disappointed.

I hope you are right, but since time just now is an urgent factor, I would rather err on the side of giving more assurance to investors of reimbursement from our country where you cannot get it from the other countries, even though authorizing that might encourage somewhat expropriation or lawlessness. But either we have got to do this by private means, or we are going to have to do it by Government means.

If we guarantee and have to pay, we are no worse off than if we had made the original investment with Government funds, and in some cases we may succeed. Therefore, I am inclined to go a bit further than your group is at the present time prepared to go.

Mr. BONSAI. I must say, Dr. Judd, in speaking of that I was speaking individually. I would not put the association of the bar on record on the subject of guaranties. It has been highly controversial, as you know. I am just speaking purely as an individual, and it might well be that my association would favor guaranties.

Mr. MANSFIELD. Will the gentleman yield?

Mr. JUDD. Yes.

Mr. MANSFIELD. Is it not true there was a Mr. Liddell representing the American Bar Association, who came before this committee urgently recommending that we put that in the legislation on guaranties?

Mr. JUDD. Yes.

Mr. BONSAI. I think that is correct.

Mr. JUDD. Mr. Bonsai, are you familiar with the so-called point 4 legislation?

Mr. BONSAI. Yes.

Mr. JUDD. You recall that the bill when prepared by this committee and passed by the House had a very considerable section, partly in the declaration of policy and partly in the substantive sections, designed to encourage and put primary emphasis on private investment?

Mr. BONSAI. Yes; I do, sir.

Mr. JUDD. As the long-term solution.

Mr. BONSAI. Yes.

Mr. JUDD. Yet the bill that finally came from the other body had most of that stricken out, and what was left was mostly a Government operation.

Would you care to comment on which your group feels is the better approach?

Mr. BONSAI. That of your committee, sir, without any question. I think I feel, and we all do, that in taking the bill before you, which has nothing about private enterprise in it at all, that when read by the recipient country—the other country—they just think they are getting on the payroll. So I think in any of this legislation we ought to put up all the red flags you could possibly put up.

Mr. JUDD. Thank you very much. The Members of Congress get letters saying, "We insist you pass so-and-so without crippling or emasculating amendments." I judge you prefer this bill not to be crippled and emasculated?

Mr. BONSAI. That is right.

Mr. JUDD. Thank you.

Chairman RICHARDS. Mr. Carnahan.

Mr. CARNAHAN. No questions, Mr. Chairman.

Chairman RICHARDS. Mr. Battle.

Mr. BATTLE. No questions at this time, Mr. Chairman.

Chairman RICHARDS. Mr. Herter.

Mr. HERTER. No questions.

Chairman RICHARDS. If I have overlooked anybody, are there any other questions?

Mr. BURLESON. Mr. Chairman, if I may just ask Mr. Bonsai this question, I would appreciate it.

Chairman RICHARDS. Mr. Burleson.

Mr. BURLESON. I observe in your prepared statement you make reference to Egypt. Have you read the speech made by the Egyptian Ambassador recently—I believe, at one of our universities a couple of weeks ago?

Mr. BONSAI. I am sorry, but I did not say that.

Mr. MANSFIELD. Did you have the impression, Mr. Burleson, that Mr. Bonsai is testifying in place of Mr. Van Kirk?

Mr. BURLESON. Evidently I have the wrong statement before me—you are not testifying directly on the Middle East?

Mr. BONSAI. No, sir. I think maybe you are thinking of some of these other gentlemen. I did not say that.

Chairman RICHARDS. Thank you very much, Mr. Bonsai, and we will give very serious consideration to your recommendations.

Mr. BONSAI. Thank you, sir.

Chairman RICHARDS. The next witness is Mr. Clarence Pickett.

Mr. Pickett, will you have a seat, sir? Mr. Pickett, you represent what organization?

**STATEMENT OF CLARENCE PICKETT, APPEARING ON BEHALF
OF THE AMERICAN FRIENDS SERVICE COMMITTEE OF
PHILADELPHIA**

Mr. PICKETT. The American Friends Service Committee of Philadelphia. I am honorary secretary of that committee.

Chairman RICHARDS. Do you have a prepared statement?

Mr. PICKETT. I have not a prepared statement. No. I would like to make just a brief verbal statement, if I may.

Chairman RICHARDS. All right. Proceed in your own way.

Mr. PICKETT. The background of this statement arises out of the fact that toward the end of 1948 the United Nations asked our organization, along with the International Red Cross and the League of Red Cross Societies, to undertake the administration of relief for Arab refugees in the Middle East. I, being the administrative officer of that committee, went to the Middle East and assisted in the setting up of that operation, which we carried on for about a year and a half, until the United Nations set up its own administration and took over for the three of us who had carried it to that point.

I wanted to make a few observations, based on that. In the first place, I would like to impress deeply on this committee the attitude of the Arab world, as I saw it, at least, as one of hostility toward the United States. That hostility was felt even personally at the beginning of negotiations in Egypt, when we had to deal with the Egyptian Government because we were in what is now called the Gaza strip. That is the part that was taken and retained by the Egyptian Army.

That personal attitude wore off, but even to this day I expect you are conscious, as anyone is who goes into this part of the world, of the fact that because the State of Israel was recognized almost immediately on its being set up and decreed, that it made the Arab world feel that the United States was hostile to the Arab world. That was augmented, of course, by the fact that in this particular part of what used to be Palestine and now is a part of Egypt, there were 225,000 people who were away from home.

It depends on who is talking for a decision as to why they were away from home. If it is a Jew he would say that they ran away. If it is an Arab he would say that they were chased out. But, at any rate, they were away from home and were extremely unhappy. A good many of them lived on bare sand when I went there, having not even tents to live in. Some were within 10 miles of the little place where they and their families had lived for hundreds of years. The line between the Israeli and the Egyptian armies was only about 5 miles from the Mediterranean Sea. Some could stand at the edge of the town of Gaza and look across the valley at their own little land holdings, and,

of course, it made them feel bitter, unsettled, and insecure, and feel that the world was against them.

That is important, I think. No one can prove, or I at least am not in a position to prove, how much of the present political unrest is due to the unsettled conditions, that is, the continued unsettled conditions up to this time of the Arab refugees. However, you have had a series of assassinations, ending last week in the assassination of King Abdullah.

A part of the problem, I am sure, is the unrest in the Middle East, and no small part of it arises out of the long drawn out and unsatisfactory way in which these people have had to live.

I hasten to say that the United States has come to the rescue and has given, from our point of view, I suppose we would say, generous assistance. I do not mean to say by that that the Arabs have been very generously fed, because the amount of funds provided to the United Nations has not been sufficient to provide them with anything more than the barest means of living, but we have contributed in the past.

I want first of all to speak with a deep sense of conviction that I do not believe that anything could be worse or have a worse effect toward further upsetting the political and economic structure of the Middle East than that, relief should be stopped. If that were cut off one could hardly predict how much further the deterioration of relations between the Arab world and the Western World would go. So that purely from the point of view of our own relations with that very important part of the world, as well as our own sense of moral obligation, I have no hesitation in urging strongly the continuation of that relief.

In this bill there is a proposal that \$25,000,000 should be made available for that purpose.

In the neighborhood of Gaza there have been some small enterprises which have been continued and which gave some employment to the people. Other mission agencies have assisted as far as they could. However, over the 2½ years, or nearly 3 years now, relatively little, at least with these people in the Gaza strip, has been found for them to do. Consequently, they have greatly deteriorated.

This problem is not going to be solved only by giving relief. It cannot be solved without continuing relief, but there is the longer time relocation and resettlement and assimilation somewhere that has to be met. There is resistance to their returning to the State of Israel.

I myself feel there is very little likelihood that there will be very much return to their old homes, which lie within the boundaries of the State of Israel. I think there is an increasing acceptance by the Arab States and by the refugees themselves that that probably might as well be forgotten, and that they will therefore have to resettle within the boundaries of Arab States. They cannot resettle within the boundaries of any of these Arab States in any numbers without financial assistance.

Therefore, I am very glad to see that the bill includes a substantial amount of funds—probably about as much as can be digested within 1 year—for resettlement in projects within the boundaries, particularly of Syria and of Egypt, of considerable numbers of these families.

I would like to say a word about the character of the people. I think we saw them under about as much stress as anybody could be put under, with as great a sense of insecurity. They belong, most of

them, to the Mohammedan faith, and we were Christian. They are away from their settled place of abode. People sometimes think they are wandering nomads, with a camel and a goat. These people are far from wandering nomads. They are nothing like us wandering as most Americans are. Many families have lived in the same community for a thousand years, and they feel a deep sense of commitment and attachment to that piece of ground.

We had a few Bedouins, perhaps four or five thousand, but the rest were men and women of settled life, hard working, and very often had sent their children to the English-speaking schools in the Middle East. We had no difficulty finding plenty of interpreters in the younger generation, who had gone to these schools and whose highest ambition was to have a chance at a settled condition of life, where they can live on the basis of modern agriculture and, to some extent, of modern industry.

We make a mistake if we think they are a worthless lot. They are not. There are plenty of very badly embittered people. There are a great many, however, and as human beings, we have an obligation to see them through.

There is great hope in this group of people. They can be a great menace if they are not given a chance at permanency of settlement. They can be a great asset in helping to reestablish the security of the Middle East and the sense of confidence between the West and the Middle East if there is a chance given them to settle on the land.

I should think that is the primary basis. There are some other things that, of course, they can do. There is a series of projects that are available and can be started, with the amount of money that is in this proposed appropriation.

I would just like to say one more thing, which may or may not seem relevant, but it does seem to me very important, that as much stability as possible be brought to that part of the world.

We watched, for instance, the Jewish settlement in Iraq, which was a stable settlement, important to the country of Iraq, but with the general unsettled conditions in the Middle East and the general rising tide of a sense of insecurity over the last 2 years, Jews who 2½ years ago said very freely, and their rabbis also said to our own investigating committee, that, "We have no feeling we need to leave," have finally left and have gone into the State of Israel, and are continuing to overcrowd that little country.

There is great fear that will continue in other states of the Middle East, and particularly Iran, if there is not brought to them, as far as it can be brought by the United Nations, with the assistance of the United States, a greater sense of stability and security. From my point of view it would be very much better if we could maintain that sense of security even with the Jewish community where it is than to have further uprootings. The Jews, it seems to me, have had enough uprootings in Europe and other parts of the world.

If we could help to bring a sense of stability to that part of the world and prevent further uprootings of people I think it would be a great asset.

Just one final comment, and by way of commendation not necessarily of this committee or of the Congress, but it has seemed to me a matter of very great importance that the Technical Assistance Administration has seen fit to supplement the budget of the American University at Beirut and thereby provide for young people of that

great area to have technical training, and to become themselves the technical assistants that their communities need. I hope that ways will be found to continue to use those educational facilities of the Middle East.

Obviously, one of the great problems is the insecurity of most of the governments of that part of the world is the tendency to barter and haggle and try to get the best of anybody who comes in with some money in his pocket. We had that all the time. The only way I see to combat that in the long run is to support those educational institutions, which are not only bringing technical competence to young people, but also a sense of integrity of dealing, which is the basis which will have to be built up before this problem is ever finally settled.

I think, Mr. Chairman, that is all I have to say. If there are any questions, I would be glad to try to answer them.

Chairman RICHARDS. Thank you very much, Mr. Pickett. Are there any questions from members of the committee?

Mr. VORYS. Yes, Mr. Chairman.

Mr. Pickett, you told about these refugees and you said you heard two stories as to why they left Israel.

Mr. PICKETT. Yes.

Mr. VORYS. You were on the ground. Why do you think they left?

Mr. PICKETT. The fact is, both are right. There is no doubt that there were massacres of Arabs by the Jews. There were massacres of Jews by the Arabs, and both tended to scare both groups. Then there was the onrush of an army and the civilian men and women with little children running ahead of the army. Now, are they running away or driven out? It depends on who is telling the story as to which is true.

Mr. VORYS. What army were they running ahead of?

Mr. PICKETT. The Israeli Army was, of course, the one that was successful. The Arab Army was retreating before them. But they retreated before both armies. Most of the people I dealt with in the Gaza strip ran across maybe not more than 10 or 15 miles toward the Mediterranean to get away from the battle that was going on. Both armies were shooting at each other, and it was in self-protection that they ran.

Then it has to be said that there was a radio station operating at Rasmallah, which shouted very loudly, "Get out. Get out. Leave and you won't be destroyed. We will all come back and kill every Jew." That is what I mean by whose story is right.

They ran away. Of course they ran away. But they also were driven out. Both stories have a basis of truth.

Mr. VORYS. But why have they not returned to their homes?

Mr. PICKETT. They cannot return. They are outside of Israel and Israel will not let them return. There has been a suggestion, of course, of some repatriation, but there has not been worked out anything except that I suppose maybe 10,000 or 15,000 have returned out of a total of about 800,000.

Mr. VORYS. Whether they ran away or were chased, the reason they cannot go home is that the Israeli Government prevents their going home?

Mr. PICKETT. And has occupied their homes. Yes. There is heavy immigration coming in.

Mr. VORYS. I understand there was a United Nations resolution for Israel to compensate those who had left. Has that been executed?

Mr. PICKETT. I have not seen anything about compensation taking place. I do think that is very important. These people left and have had no compensation. There is a tentative agreement by Israel to compensate. The thing has become more complicated as time has gone on since in the meantime, for instance, nearly 100,000 Jews have left Iraq in the last year and a half, leaving behind their property, which Arabs have taken over. Therefore, the Jews now begin to say, "Oh, yes; but we must also take that factor into consideration."

Mr. VORYS. Has the United Nations acted on that?

Mr. PICKETT. They have not acted on it, so far as I know. I think there has been no action. It does seem to me, however, and I should be very glad to see some strong emphasis put on it, if this committee had a way of doing it, that there should be a settling of the question of property, even if they only get a modest percentage of the value of what they have left behind.

I talked to a man in Jaffa who had a dry goods store with \$100,000 of stock. Here he was living like any other refugee. He has no idea whether he will ever get a penny for that. Now, that ought to be settled. It is a source of irritation that continues, and I would like to see any emphasis put on the settlement of that claim, even if it is a very modest settlement that is worked out.

Mr. VORYS. Thank you very much.

Chairman RICHARDS. Are there any other questions?

Mr. BURLINSON. Mr. Chairman.

Chairman RICHARDS. Mr. Burlinson.

Mr. BURLINSON. I will direct the question to Mr. Pickett which I raised a little while ago with the other witness, because I was confused at that time. The question related to the speech which the Ambassador from Egypt made at Princeton a short time ago with reference to the American policy in the Near and Middle East. Are you familiar with that statement?

Mr. PICKETT. I did read the speech. Yes, sir.

Mr. BURLINSON. Would you care to comment on that?

Mr. PICKETT. I think you got there a pretty good representation of the feeling of the Arab. For our purposes Egypt is classified as a part of the Arab world, although you find a good many Egyptians do not want to be classified as Arabs. I guess they feel they are a little higher order of being. I think he represented pretty accurately the feeling.

Mr. BURLINSON. He severely criticized the policy of this country over the last several years in recognizing the State of Israel to the disadvantage, to say the least, of the Arab world, as well as the policy that we have been pursuing over the years to build up the sentiment of the Arab people.

I am wondering if you agree with that as to the policy of this country? I might add that he says in regard to the colonial policy of the Western World that no monetary aid to the Arab world is going to cure this situation at all; that only by giving them their independence and freedom from colonial rule will you be able to cure it.

Do you agree with that?

Mr. PICKETT. I certainly agree that that is the feeling of the Arab world. You have got a very bitter antagonist. The Jew had a very tough time, as our organization certainly has ample reason to know, in Germany. We have every sympathy with their terrible difficulties as refugees being driven out of their homes and leaving their property behind them. What is difficult to see is the same thing happening now in the State of Israel and the Arab feels that the Jew has tended to do to him what Germany did to them.

Now, whether rightly or wrongly—and perhaps quite wrongly—we get the brunt of the criticism for that because we recognized the State of Israel so very promptly after it was set up. As I say, I do not see any possibility for complete justice being done to everybody in this case. It is such a mixed situation. However, every step toward some kind of security of life is the form I think in which justice should be approached.

If an Arab in the State of Jordan, which is not a very large state, can find a little farm on which he can build to build security for himself again, that is the form in which security will come. I think, and not relighting the Israeli-Arab battle of 2½ years ago, as some Arabs are inclined to do. We cannot settle that whole score, but we can make a contribution to this reintegration into the Arab States.

I would like to repeat that I know how difficult it is, and how insecure these governments are, and it is a 4- or 6-year program at the least, with this as the first major step in that direction. However, I think it is basic to any kind of a settled Middle East.

Mr. BURLESON. Thank you.

Mr. JUDD. Mr. Chairman.

Chairman RICHARDS. Dr. Judd.

Mr. JUDD. How much did your organization, that is, you and associated groups, spend per year for that group of Arabs?

Mr. PICKETT. We spent about \$2 per month per person.

Mr. JUDD. That is \$24 a year for 225,000, you said?

Mr. PICKETT. Yes. 210,000, I would say. 225,000 I think is a little high. As I remember it, it was something like \$4,000,000 a year.

Mr. JUDD. This suggested bill provides \$25,000,000.

Mr. PICKETT. Yes.

Mr. JUDD. Is that just for those 200,000 Arabs?

Mr. PICKETT. No.

Mr. JUDD. That includes a lot of others besides?

Mr. PICKETT. Yes. You see, there were three agencies, and we were only one of them. We had a little less than a third of the burden to carry. There were about 800,000, and we had a little over 200,000 of them. The International Red Cross and the League of Red Cross Societies had rather more.

That \$25,000,000 lasted a little over a year. I suppose with the increase in prices I would not expect the \$25,000,000 would last much more than a year now.

Mr. JUDD. You said there was resistance to resettlement. Was it primarily resistance by the refugees to returning, or by Israel to letting them in?

Mr. PICKETT. Both. You cannot make any other statement that is characteristic of all.

Mr. JUDD. I was trying to clarify what you said.

Mr. PICKETT. They would come to us and say, "Should we go back into Israel if we got the opportunity?" I talked to one very distinguished person, a Moslem, who said, "Don't let a one of them go back." Azzam Pasha, who was secretary of the Arab League, said, "Unless a half million go back there will be a war and we will kill every Jew."

You get all sorts of comments from one end of the scale to the other. I think a great many now have come to the conclusion that they do not want to go back to Israel. They cannot go to the particular spot they lived in. Somebody else has it. Therefore, they had better settle outside.

Mr. JUDD. How long is it since this operation was turned over to the United Nations Organization?

Mr. PICKETT. Just a year.

Mr. JUDD. Do you have any comment as to whether they are doing as well, or not as well, or better than your folks did?

Mr. PICKETT. Dr. Judd, you have probably done this thing yourself, so you know that people deteriorate under this kind of treatment. I know they have got a very tough job. We had some riots, and I think they have had more riots. It was a hard job, but I think they have done a good job in an almost impossible situation.

The resettlement end of it has been a disappointment to many of us who are concerned. They have not gone as far as we had hoped they could. However, that takes a long time, and they have made a beginning in a few places.

Mr. JUDD. What I am after is this: I know you have had vast experience in this field and there is no organization which has had greater success than has the American Friends Service Committee. There are always the two points of view. One says that in any such operation almost the main thing is the human attitude of workers; and that an organization of volunteers such as yours, can, and usually does do, a better job than can or will a Government agency, whereas frequently people sent out by the Government take it as just another job. Even more questions can be raised about the United Nations than about our own Government agencies, because it is a more polyglot organization, with all kinds of standards, backgrounds, and attitudes represented.

The other view is that only Governments have the power and resources to carry on such operations adequately at some length. I am asking you for your honest opinion, for the guidance of the committee, as to whether in the organization of operations in the future we should do the job ourselves, or as far as possible help private agencies do it, or turn our money over to the United Nations to do it as an international agency?

Mr. PICKETT. I have no doubt about the dedicated volunteer. When he does not have such a big job that is beyond his capacity he will do a better job, I think. I think that is almost always true.

However, when it comes to a great volume of people to handle, you can bite off more than you can chew. I think we did a fairly good job in Gaza, but I was dissatisfied, and all of us were, because we believed that a far better job ought to have been done if we had more people and more facilities. We tried to save all the money we could, and we had to, in order to get by.

I do not want to seem critical of those who took over for the United Nations because they had a very, very difficult, and an almost impossible job. But my confidence still continues in the small voluntary agency to handle as far as they can within their capacity these jobs. I think you do get a personal contact and an identification with the misfortunes of the people you are working with that is very rare in big Government operations.

Mr. JUDD. But you do not care to comment on the probable effectiveness of an agency of the UN, as against, for example, that of one nation? Some Members of Congress say we ought to put up the \$25,000,000 and handle it ourselves as an American operation. Then we take the responsibility for success or failure, rather than turn it over to an international organization, where we have 1 vote out of 60. What is your answer to that?

Mr. PICKETT. I would like to use the parallel of UNRRA. Most people think it was a failure. I recognize it had many failures, but I saw it pretty closely and knowing all the complications, I think UNRRA was a pretty good job.

I could tell you a dozen things I think were wrong with it, but the size of the operation never could have been carried on by all of us put together as volunteer agencies. We could not have collected the money.

I think I would say we ought to look forward to developing the thing on an international basis and recognize we are in the preliminary stages.

If you began just today and were going to operate on an emergency basis for just 1 year, or 2 years, we would probably be able to handle it bilaterally better. But I think other countries have a great deal to contribute. Even in our own staff we find it an advantage to use people from other countries.

In Palestine we used French, English, Swedes, and Swiss, all to our advantage.

I will say this: There is nothing we did that was more inclined to enable us to succeed in our relations with the Egyptians and the Arabs than the fact that the leader of our medical service was a New York Negro doctor. We make a mistake if we neglect the use of Negroes in the staffs of foreign operations.

It all adds up, Dr. Judd, I think, to saying that we ought in the long run to learn how to operate an experiment and expect other people to participate with us and do it successfully, recognizing that we are still in the preliminary stages of that development.

Mr. JUDD. Thank you very much.

Chairman RICHARDS. Mr. Battle.

Mr. BATTLE. I want to ask one question of Mr. Pickett, please.

The State Department has given us some figures here: They have requested \$23,500,000 for the various Arab States, and likewise they have requested \$23,500,000 for the Israelis. In your judgment do you think that would be a fair ratio of the funds according to the needs of the peoples in those areas?

Mr. PICKETT. I do not believe I have a judgment on that. It seems unbalanced, on the face of it, does it not? I mean, populationwise. Because the Arab States have so many more population than the State of Israel.

Mr. BATTLE. You have first-hand experience and a much broader knowledge of the area than we do, or at least than I do. Therefore, I would like to have your views on the relative needs and the total proposed expenditures.

Mr. PICKETT. I have those figures, and I expect they are the ones you referred to here. In addition, that does not take into account, as I understand, the \$50,000,000 which would be added to it in the Arab States for resettlement of Arab refugees and relief for Arab refugees. Actually, you would have \$73,500,000 going into the Arab States, although \$50,000,000 of that goes for relief and the resettlement of the Arabs.

Mr. BATTLE. In addition to this we have a bill before us and we have had testimony in this committee to the effect that Israeli needs \$150,000,000 instead of the \$23,500,000.

Mr. PICKETT. Yes. Well, you refer to this statement. I have a copy of this, which is a public document, as I understand it, and I read it this afternoon.

Now that is predicated on a very large influx, a further influx, into Israel of refugees from other states, as I understand it.

You may not have understood what I said, but it seems to me very important that we should do everything we can to prevent, for instance, a growth of the feeling of insecurity of the Jews in Iran causing them to leave. I myself have felt very sorry that the Jews in Iraq have felt they had to leave.

Two and a half years ago when we made a study there, their own people did not feel they had to leave. Now there has grown up such a sense of insecurity they had to leave. I have felt there should be every form of stability for keeping people where they are, rather than anticipating immigration that may happen if we do not put the emphasis on security.

Mr. BATTLE. Are there problems in the Arab States that would likewise require additional funds in case they were available, where the needs would be just as great so far as future planning is concerned?

Mr. PICKETT. I think that probably will develop, although here I speak with great hesitation because I am not sure enough of my facts. But you cannot spend money too fast in new projects in these countries that are rather unstable. Take Syria, for instance, which seems to be the most likely place for resettlement of large numbers of refugees. Nevertheless you change prime ministers, sometimes by assassination—frequently by assassination—every few months. It is pretty unstable.

Now that is a great misfortune because Syria would profit by receiving and helping to resettle these people. But whoever administers that fund has a difficult undertaking, and I would not advise him to rush in with large amounts of money and spend money too fast there. He will have to move slowly and carry the Syrian Government and people along with him.

So it might take more than 5 years to do the resettling, just because of the frailty of the Government institutions. If you spend money too fast graft will get the upper hand, and the people who ought to be served will not get it.

Mr. BATTLE. How dense is population now in the Israeli area? Is it crowded? Can they absorb many more refugees?

Mr. PICKETT. I suppose that is a question of how much they industrialize. I am not really able to speak with accuracy on that. I was

there a few years ago, and they were having real trouble, of course, getting people out of the camps they first go into and then resettle.

But they have established some industries since. There is no doubt about its being a magnificent job of development, but I think it is dangerous, the danger being that they overpopulate.

Mr. BATTLE. So far as the immediate problems are concerned, would you say that this \$150,000,000 proposed for Israeli, as compared to the amount proposed by the State Department, that goes to the Arab States, would be high or low, or a fair proportion?

Mr. PICKETT. From my point of view it seems high. Not the amount of money so much, but as I understand that document, if I read it properly, their case was based on the expectation of greatly increased immigration coming into Israel from the outside.

Now I hesitate very much to see us almost stimulate uprooting people from other parts of the world by an appropriation. I may be wrong on that. This business which is so characteristic of our day, millions of people being uprooted, is so terribly devastating to stability and respect for people that I just hate to see anything done that is predicated on its continuance.

Chairman RICHARDS. Mr. Herter?

Mr. HERTER. The House this afternoon passed an amendment to the State Department appropriation bill for international organizations, limiting the United States contribution to any international organization to one-third of the total cost.

How would an amendment of that kind affect the operation of this particular refugee organization in the resettlement business? I suppose we must be carrying 90 percent of the cost.

Mr. PICKETT. Yes; very disastrous, I should think.

Mr. HERTER. There you run into the difficulties from the point of view of setting up an international organization and end up carrying the whole burden. We are running into the same problem in the Korean rehabilitation.

I was wondering how you feel about that. Should we still develop those international organizations and pay up to 90 percent of the whole cost?

Mr. PICKETT. I recognize that as a very businesslike problem, Mr. Herter. It is not healthy. But I am pretty sure that the future is with international cooperative agencies of this sort, and I would rather put the emphasis on doing everything we possibly can to help get other countries to participate.

Chairman RICHARDS. Mr. Carnahan?

Mr. CARNAHAN. Is the boundary line between Israel and the surrounding Arab States pretty well fixed now?

Mr. PICKETT. Well, from a practical point of view, it is very well fixed. It is guarded, and there is very little passing back and forth. As to its being settled permanently by the United Nations, I do not think it is yet.

Mr. CARNAHAN. And the entire boundary line is patrolled and guarded?

Mr. PICKETT. It was 2 years ago. I do not think it is quite so fully patrolled now, but there is no traffic back and forth without a lot of red tape, and no commercial movement back and forth except with the greatest of difficulty.

Mr. CARNAHAN. Did you find the feeling in the surrounding Arab States that perhaps there might be a tendency on the part of new country of Israel to expand further?

Mr. PICKETT. Oh, the Arabs feel that there is no doubt about that.

Chairman RICHARDS. Mr. Herter?

Mr. HERTER. Do you mean they fear that?

Mr. PICKETT. Yes.

Chairman RICHARDS. Go ahead, Mr. Carnahan.

Mr. CARNAHAN. Which of the Arab countries is carrying the heaviest load in taking care of the Arab refugees?

Mr. PICKETT. Do you mean the percentage?

Mr. CARNAHAN. Which one has the greatest problem, Jordan?

Mr. PICKETT. I suppose that Jordan probably has the largest population now. Lebanon, a relatively poor state, has a good deal to carry. I really feel that the Arab States, in view of their ability, have done pretty well.

Mr. CARNAHAN. Do you feel that the problem can, over a period of years, be satisfactorily solved, or partially at least?

Mr. PICKETT. Well, yes. It will never be perfectly solved. There will be bitterness. If there is an intelligent and concerted effort, in the sense of a 5-year or 6-year or 7-year plan, it might be successful.

I might say, in commenting further, Dr. Judd, on your question, I think the private agencies are willing to, and are going to, participate in the problem of resettlement. Now we are planning a project in Jordan, not that we think it will amount to very much in volume, but we do think it will mean something in terms of what can be done by intensive work.

Chairman RICHARDS. Mr. Judd?

Mr. JUDD. Is that not always the case, where the primary job is to establish demonstrations or pilot plants till they develop a sense that "this can be done"?

Mr. PICKETT. Yes. It is a voluntary effort.

Chairman RICHARDS. Can we move along?

Mr. FULTON?

Mr. FULTON. The question as to refugees of course is in respect to people who must move, and thereby become refugees. The conditions under which they are living become intolerable, and then they voluntarily leave all their possessions, take to the road, and try for a place where they will be acceptable. It takes terrible conditions to force that, so refugees have little so-called choice.

Mr. PICKETT. Yes.

Mr. FULTON. Under those circumstances, you have no objection to persons being refugees, do you?

Mr. PICKETT. I think probably I would become a refugee myself under those circumstances.

Mr. FULTON. That is correct. Then behind the iron curtain there are many countries—and I have visited several of them—where certain minority groups are getting the least in the economy and the economy is almost on a starvation basis.

Mr. PICKETT. Yes.

Mr. FULTON. So you would have no objection to those persons seeking freedom, freedom of religion, would you?

Mr. PICKETT. No.

Mr. FULTON. If that be the case, we could look ahead for refugees from behind the iron curtain, and also for refugees from certain countries where they are minorities, and because of the Arab-Israeli dispute there has been friction and instability created. We can look ahead to that?

Mr. PICKETT. I am afraid so.

Mr. FULTON. And we can look ahead to a refugee problem without stimulating it, or without encouraging it.

Would you say that in Israel the conditions are stable, and that there is relative adjustment as between the Arabs who have stayed and the Israeli Government?

Mr. PICKETT. Well, there certainly is more stability than for those who have gone out. The problem the Israeli State has in relation to the Arabs who have remained inside the country is that of their being a minority, and a minority psychology is developing. This I get from those people themselves—people and government. And at their request the committee has undertaken one of these pilot experiments in taking over a group of villages in the area of Nazareth, where they are all Arabs, and all farmers as in Jesus' time, now using a Caterpillar tractor and modern certified seed, and all the modern devices for production and distribution.

Mr. FULTON. So then there is the necessity for aid in Israel on a charitable and humanitarian basis both for Arab and Jew. Likewise there is a necessity for aid on that same basis in the surrounding states for populations who are submerged by the ruling classes, and also for the refugees in those states which are not yet assimilated; is that not correct?

Mr. PICKETT. Yes.

Mr. FULTON. We in America then have the duty of the defense of this country. We must necessarily be interested in the Near East primarily from the view of our defense and our relations to friendly nations. Therefore, if it will help stabilize by meeting the problem of refugees, either current in the present tense or in the future as they arise, do you not think it would be wise for us around this table to help stabilize the area to meet the problem squarely and to assist regardless of whether they are Jew or Arab?

Mr. PICKETT. I agree.

Mr. FULTON. Then, if you agree in our approach to this legislation, we would have to look to see the country as to the problem each country has. That cannot be reduced to the simple equation of multiplication or addition upon a population basis; can it?

Mr. PICKETT. No, sir.

Mr. FULTON. If we go that far, the question then is: If there is in the program \$50,000,000 for relief purposes for refugees in Arab areas, I believe I would approve consideration of that. But I would nevertheless say to Israel, not on an equating basis, but I would say to them, "What do you look forward to as to your refugee problem that may come up in the future?" Would you not do that?

Mr. PICKETT. Yes. What I tried to say was that in addition to the obvious persons now waiting here and there in camps to go into Israel, I am anxious not to see the unsettling of settled Jewish communities in any part of the Arab States. They are getting along now, and I would do everything I could to discourage their leaving.

Mr. FULTON. Members of this committee have been through these refugee camps from Poland to Italy, for all one summer, looking at the refugee problem. We do not believe refugee problems are encouraged by appropriations here. These people never hear of it, before they become refugees. They move first to get away from their difficulties and starvation and lack of liberties and freedom and knowledge. Then when we see them afloat with no possessions, Friends Service, Catholic, Protestant, and other church people and nations such as ourselves, must be ready to receive them.

Mr. PICKETT. I agree.

Mr. FULTON. Then do you not think that rather than cut off the refugee question in the future, we should be ready here in the next fiscal year to look the refugee problem in the face in the Near East and say we are going to meet it?

Mr. PICKETT. I agree. I may be wrong in my analysis of this statement of the Israeli Government, but it seems to me it went further than I would like to see it go in anticipating that there will be migrations that now are not appearing above the horizons. And my only statement is to express the desirability of using every means you can to prevent the necessity for further migrations arising.

Mr. FULTON. Do you know of the statement of the Israeli Government before the United Nations that they will now adopt a policy of recompensing the Arab refugees for any property abandoned or left behind in Israel?

Mr. PICKETT. Yes, I know of that statement. That was made about 2 years ago, and I cannot understand why that cannot be implemented.

Mr. FULTON. So that the Israeli Government then is adopting a policy as to refugees which, under the circumstances—and they are exceedingly rigorous circumstances—is in line with what we would call good international law.

The Israeli Government, as you know, has stood up militarily against all the surrounding states, have they not, and successfully met any opposition?

Mr. PICKETT. Yes.

Mr. FULTON. So that if we are legislating for defense purposes on a military basis, which is the mutual defense assistance bill, we then look not only to the numerical populations but we also look to the aid they will be to us in the Near East, do we not?

Mr. PICKETT. Yes, of course. From my point of view, I think the proper and practical thing is to never let it come to the point of making soldiers out of them. If we neglect this it will come to that. I think that it is possible to forestall that stage of revolution.

Mr. FULTON. Now you know that when we passed the aid bill for Greece and Turkey, certain Arab States raised great objection to the aid?

Mr. PICKETT. Yes.

Mr. FULTON. Because they were left out.

Mr. PICKETT. Yes.

Mr. FULTON. In spite of that objection, we gave the aid to Greece and Turkey on a defense basis for this country.

Do you believe that in that instance it was wise to overrule the objection of the Arab States?

Mr. PICKETT. Well, I am not sure I get your question there.

Mr. FULTON. We gave aid to Greece and Turkey. The Arab States objected. We nevertheless gave the aid. Do you now believe that it was wise to overrule the objections of the Arab States, and nevertheless for the United States to give the aid to Greece and Turkey for its own defense?

Mr. PICKETT. I think you are asking me questions which I am not competent to answer. I do not remember that incident of their refusing. Was that before they were refugees?

Mr. FULTON. The objections of the Arab States to the aid to Greece and Turkey.

Mr. PICKETT. Well, I do not know enough about that to give an opinion.

Mr. JUDD. Was not their objection to our not giving them aid, rather than to giving Greece and Turkey aid?

Mr. FULTON. The reverse too.

Do you favor the aid to Greece and Turkey which has been given?

Mr. PICKETT. In the light of history, I am not quite sure what I would say about that. I have no doubt that aid was very essential for many people in Greece and Turkey. But if you are referring to defending ourselves by containing communism in that way, I have real hesitation in my mind about the long-range success of that policy.

Mr. FULTON. The only basis on which we can use the taxpayers' money, as you know, is for the prime interest and defense of the United States of America, not in casting bread upon the waters. So would you then object solely on a defense basis to this whole bill, the Mutual Defense Assistance Program, as a method of containing communism—I almost said Congressmen.

Mr. PICKETT. I must say I am sorry it is cast in the framework of defense, because I think the best defense is to do the thing that ought to be done and not just think all the time: Will this or will this not defend our country? I realize we have to spend money in the interest of our own country, but I am not sure that a narrow conception of defense is the best conception of defense.

Mr. FULTON. Do you object to a military aid program of the United States Government supplying arms to its allies abroad?

Mr. PICKETT. Yes, I would rather they did not.

Mr. FULTON. So that actually the basis upon which you are testifying here, both as to the whole program and to Israel, is solely on a humanitarian basis, a charity basis?

Mr. PICKETT. I do not think that is the necessary alternative. Humanitarian, yes. But also the very wisest thing in the world we can do.

I think if we do not give to these things that are basically humanitarian in nature, then the necessity of using arms is much greater. So it is hard to separate them as you have separated them, it seems to me.

Mr. FULTON. Well, you are the most peaceful revolutionary I have yet met.

Mr. PICKETT. Well, I do not pretend that I can solve all the problems of the world.

Chairman RICHARDS. Mrs. Bolton?

Mrs. BOLTON. I am deeply interested and troubled as well by the statement you made that the Arab world is so very antagonistic to the United States.

Have you any sense that we can win back the friendship we have lost and how? For we had the heartfelt friendship of all the Arab world.

Is it too late to bring back at least a partial amount which would give us more security in the whole world?

Mr. PICKETT. No, I do not think it is too late. I think it is a long process, and the prejudices are deep enough with some of the older people so that they probably will never be removed.

But I do think that a slow, gradual program of sustaining the best institutions of the East—and I would say Musa Alami at Beirut is a striking illustration—that is one of the things highly respected and is a standing illustration, and I hope that Monsignor McMahon will mention some of the things that the Catholic institutions have been able to do in the Middle East.

Now those are all very important, and I am glad that the institutions of Beirut are willing to accept Government money—some of us are a little chary at times accepting American Government money, afraid it will bind our freedom.

Then certainly this relief bill, and even more beyond relief, if we are able to resettle, that will have a great deal of effect.

Mrs. BOLTON. What they need, perhaps, is the rebirth of hope, is it not?

Mr. PICKETT. Yes. It is very hard to maintain hope when you have nearly a million people wandering around in your midst, not only the refugee but the other population who tend to feel the world has forgotten them.

Mrs. BOLTON. May I ask you this very pointed question? For my time is going rapidly: In your area near Gaza, you had a good deal of difficulty, did you not, with adequate schooling for the children?

Mr. PICKETT. Yes, we had a great deal of difficulty. I am not sure of the statistics now because we have been away for a little over a year, but we had 16,000 children in school. The population was interesting. We had nearly 60 percent of the population of school age—16 is school age—from there on down. And that was a very important thing.

We had about 16,000 of them in schools. I think it has gone higher than that since that time. And that is, of course, a very important item.

Mrs. BOLTON. And you were bringing out at one point the fact that some of these people who are out there on the desert, in the sands, are highly cultured, intelligent people.

Mr. PICKETT. Yes. Former judges of courts, businessmen, teachers, Government administrators.

Mrs. BOLTON. Have you been able to get across to the people of this country any of those facts? It seems so difficult to get any knowledge across to our people.

Mr. PICKETT. To some extent, but not anything adequate. I think the problem of the Arab, of the Middle East, is not very well understood by most Americans. I have found resistance to it to be largely based on ignorance. I certainly was ignorant about it.

Mrs. BOLTON. Yes; it is so much a matter of ignorance. After all, understanding is the first step.

Mr. PICKETT. Yes; understanding is the first step.

Chairman RICHARDS. Mr. Javits?

Mr. JAVITS. I have a question I would like to ask Mr. Pickett.

Mr. Pickett, first let me say—I will make this very brief—that your organization is well known in many areas of the world as doing a fine job. Second, let me say that I am devoted to the cause of Arab-Israeli peace, and also that I believe Israel's future lies in the context of the Near East, and that the security and prosperity of that area will determine her success.

I do feel though that in one or two instances the facts ought to be straightened out in the record, and I am sure we could get them straight just in a very few minutes.

You said you did not want to see people uprooted from other parts of the world. I would like to ask whether you are aware of the fact that the migrations into Israel and the migrations which are forecast and to help with which we are asked to appropriate money come from not uprooting people but from giving them sanctuary. Yemen, for example, ordered the Jews out, and confiscated all their property. They had to be taken out or perish.

Now much the same was true in Iraq, where evacuation of Jews has just about been completed. Their property was in effect confiscated. They were committed, essentially, to Nuremberg laws—they could not have jobs—life was just about unbearable.

In Iran, in effect, Jews have to get out. There have been riots against Jews in North Africa.

Now, it is a fact, of course, that this has all come about since the establishment of Israel, but it is the old question of the chicken and the egg, and we do have the grave problem of imminent persecution.

I am not trying to assess fault. I am just talking reality now. I ask whether in making the statement you do—I ask whether in view of these few facts I have just given—and I am sure you know them, and a good many more—would that not condition your answer to that question?

Mr. PICKETT. I am afraid I am taking entirely too much time, but we were requested to make a study of what was happening about 2 years ago in Iraq. You may have seen the report. The report was fully confirmed by another independent agency that made the report that there was no necessity for Jews leaving Iraq. They said, "Leave us alone. Do not disturb us. Do not rock the boat and we will be all right."

Now it is quite true that since then there have been laws passed, a rising tide of opposition and they had to come out.

What I am saying is that it seems to me that we Americans ought to catch those things we can before they reach that stage of irritation to where they do have to come out. I am not blaming them for coming out; I am saying "Have we done everything possible in preventing that stage?"

And I just do not want to miss any opportunity we have to create the possibility of people living on where they have lived for centuries. I am not criticizing anybody for anything that has happened, but it is a great pity when people have to leave, be uprooted, and leave property behind—people who have lived together for centuries.

Mr. JAVITS. I have just one other question. I thank you very much for the elucidation of that view. You said that the Arab refugees were being cared for, if I heard you right, by these various Arab States. There is this group at Gaza, under Egypt, a large group

in Jordan, and it was our understanding in the various appropriations that we have had here for the Palestine Refugee Fund of the United Nations, that the Arab States on the contrary were doing very little.

Mr. PICKETT. Yes.

Mr. JAVITS. But we are being asked to put up this money to resettle the Arabs because it was not available otherwise unless we and others like us put it up, and the Arab States would not take them in unless the money was forthcoming.

Mr. PICKETT. Well I think it is perfectly true that most of the Arab States, perhaps all of them, and you can include Egypt, could not or would not take the whole problem. When we went to Gaza the Egyptian Army was giving 600 calories a day. People cannot live very long on that, but they were doing what they could.

The people of Lebanon have done what they feel is quite a contribution in giving housing. They do not have tents there very much; they live in villages and in people's houses. It does not mean governmental appropriation, but rather one way or another these poor people of the Arab States have done a good deal. For instance, individual families in Gaza have reduced themselves to poverty helping out.

It does not amount to very much in volume, but I just want to pay my respects to what the Arabs have done for themselves.

Mr. JAVITS. That is human decency, and we should be grateful for it.

Have the Arab state governments done anything about resettling the refugees?

Mr. PICKETT. Not very much.

Mr. JAVITS. Thank you very much.

Chairman RICHARDS. Thank you very much, Mr. Pickett. We appreciate your coming.

Dr. Walter Van Kirk, will you have a seat, sir? Doctor, have you a statement?

STATEMENT OF DR. WALTER VAN KIRK, NATIONAL COUNCIL OF CHURCHES OF CHRIST IN THE UNITED STATES

Dr. VAN KIRK. I have it. I can read it in about 8 minutes, and I would appreciate the privilege of reading it if I may.

Chairman RICHARDS. You may present it in your own way, Dr. Van Kirk.

Dr. VAN KIRK. My name is Walter W. Van Kirk. I am an executive officer of the National Council of the Churches of Christ in the United States of America. I am not, however, officially representing the organization at this time.

I am here in response to a request from your committee. It was suggested that I might have information that would be relevant to the committee in consideration of that section of the mutual security program for the fiscal year 1952 which deals with the Middle East.

I was one of the American churchmen present at the recently convened conference on the Palestine refugee problem. This conference was held under the auspices of the World Council of Churches and the International Military Council. This conference met on the

campus of the American University in Beirut, Lebanon, May 1-8, 1951. There were present some 50 delegates from 8 nations and from many Protestant, Anglican, and Eastern Orthodox churches. In addition, there were 22 observers and consultants including certain members of the staff of the United Nations Relief and Works Administration for Palestine Refugees.

If it is agreeable to the committee, sir, I will attach to the statement I am now making a copy of the Beirut conference statement for inclusion in the record of these hearings.

Chairman RICHARDS. A long, two-page document?

Dr. VAN KIRK. Yes; two pages.

Chairman RICHARDS. Without objection that will be included in the record.

(The document referred to is as follows:)

WORLD COUNCIL OF CHURCHES AND INTERNATIONAL MISSIONARY COUNCIL REFUGEE
CONFERENCE, BEIRUT, MAY 4-8, 1951

CONFERENCE STATEMENT

We, members of a conference on the Palestinian refugee problem, meeting in Beirut on May 8, 1951, under the auspices of the International Missionary Council and the World Council of Churches, are shocked by the plight of the refugees from Palestine. As we visited different areas and saw the appalling conditions under which they are living in camps, and towns and villages, we have had our minds brought sharply back to the tragic chain of events which has caused this situation. Scattered over five countries, more than three-quarters of a million Palestinian refugees have been subjected to terrible privations, lasting in many cases for a period of 3 years. They have suffered grievous physical and material losses, but their mental, moral, and spiritual hurt has perhaps been even greater. Furthermore there is no end in sight. Little wonder is it that their morale is steadily deteriorating, and that many show signs of desperation.

The responsibility for the present situation must be shared by many nations and political groups. Insofar as Christians by their action, or inaction, have failed to influence in the right course the policy and decisions of their governments and of the United Nations, they too are guilty. Upon us, therefore, falls the greater responsibility to seek, in collaboration with all men of good will, a constructive solution for the problem. Moreover, none of us can claim that we have hitherto discharged the humanitarian obligation that lies upon us.

Along with millions of refugees in other parts of the world—Europe, India, Pakistan, Korea, and elsewhere—the greater proportion of the Palestinian refugees are the victims of a catastrophe for which they themselves are not responsible. A deep injustice has been inflicted upon them, a measure of suffering they never deserved. To them is owed a debt of restitution by their fellow men, especially by those who in any way shared in the responsibility for their present plight. Yet we realize that nowhere in the world today can the claims of absolute justice be enforced, and that only the healing hand of time, and the exercise of a spirit of forgiveness, can release those forces which will make for peace, mutual understanding, and reconciliation.

We are convinced that there can be no permanent solution of the problem of the Palestinian refugees until there is a settlement of the outstanding political differences between the Arab States and Israel. Churches are not competent to lay down the lines of a political solution. It is the duty of all governments in cooperation with the United Nations to press for, and to facilitate, an early and agreed settlement, as an indispensable condition for achieving a lasting solution of the refugee problem. This particular settlement can only come as part of the general settlement of international problems in the Near East, and it will need the support of international guarantees, so as to remove the spirit of uncertainty and fear from the political atmosphere of the region.

Such a settlement will have to contain provision for the return of a certain number of refugees to their original homes. It must also include a general plan of compensation for refugees whether they return or not. We urge that, on both counts, the settlement should be not only just but generous. Yet, while we recog-

nize the basic right of all refugees to their own homes and property, nevertheless a careful appraisal of the total situation has compelled us to conclude, however, that many Palestinian refugees will have to settle in new homes. For their integration into the life and economy of the Arab States, large sums of money will be needed, and needed quickly. It is the undeniable obligation of all who have shared in responsibility for the present tragedy also to share in the cost of making reparation for the damage done. And, since all schemes of resettlement require time for implementation, the essential financial contributions must be in the form of guaranteed, long-term commitments.

Finally, we appeal to all Christians to use their influence in persuading their Governments and the United Nations as to the need for a definite political settlement and large-scale schemes of relief and reconstruction. We would urge all Christians to give personally on a far more liberal scale to all the activities of the Christian voluntary organizations engaged in the work of relief, rehabilitation, and resettlement in the Near East. We would call upon the Christian churches throughout the world to cooperate more actively with the churches of the Near East which have been so hard hit by the present tragedy in order that they may maintain their Christian witness and face in a constructive way the opportunities of the new situation.

Mr. VORIS. Can I see one?

Dr. VAN KIRK. I have only a few copies here. I will leave one with the clerk.

Chairman RICHARDS. Have you got one or two there you can pass around?

Dr. VAN KIRK. Yes.

Prior to the official opening of the conference the delegates visited many of the refugee camps in Arab territory. I myself was a member of the group that visited camps in the Hashemite Kingdom of Jordan all the way from Arab Jerusalem up to Amman, the capital city of Jordan. I and my colleagues were shocked by the plight of the refugees.

Scattered over five countries, more than 750,000 Palestinian Arab refugees have been subjected to terrible privations, lasting in many cases for a period of more than 3 years. They have suffered grievous physical and material losses, but their mental, moral, and spiritual hurt has perhaps been even greater.

The morale of the refugees is steadily deteriorating, and many show signs of desperation. It was the unanimous judgment of the Beirut conference that the Palestine refugees are living under conditions of deep injustice and are subjected to a measure of suffering they never deserved.

The conference said—

To them is owed a debt of restitution by their fellow men, especially by those who in any way shared in the responsibility for their present plight.

It came as a distinct shock to those of us who attended the Beirut conference to discover the extent of hostility and ill-will toward the United States throughout the Arab world. This we saw in the areas we visited and learned in the reports we had from various Arab lands.

The United Nations, moreover, is held in low esteem. It will not surprise you to be told that many of the Arabs look toward Moscow for leadership in their hour of need, since, rightly or wrongly, they believe they have been abandoned by the United States and the west generally.

Since it is a part of our national policy to create situations of strength in various parts of the world, it can only be said that we have thus far failed to achieve that objective in the Middle East,

insofar as winning the confident friendship of the great majority of the peoples of that area is concerned.

That is why it is of the utmost importance that adequate provision be made in the mutual-security legislation now under consideration for economic and technical assistance to the Middle East.

In addressing myself to this question I do not appear before you as an expert on the economic, military, or political problems of this part of the world. I am here as one who has seen a vast multitude of people in despair. These people happened, for the most part, to be Arabs. As a Christian, I must be concerned with their plight, no less than with the plight of refugees elsewhere. It was for the purpose of evidencing this concern that I accepted the invitation of your committee to appear here today.

There is included in the proposed legislation a contribution of upward to \$50,000,000 to Arab refugee problems.

Now I do not know whether this figure is correct, or the one Mr. Pickett gave, of \$25,000,000. But I seem to see in the breakdown of the figures of the State Department for the mutual security program a \$50,000,000 item.

Chairman RICHARDS. That was to be used for the United Nations.

Mr. PICKETT. \$25,000,000 for relief.

Mr. VAN KIRK. I am confident that the American Christian community will support this recommendation.

The Beirut conference recognized the basic right of all Palestine Arab refugees to their own homes and property. However, the conference was forced to the conclusion that many of these refugees would have to settle in new homes, and that for any long-term plan of resettlement, funds on a large scale from both public and private sources would be needed for a considerable period of time.

It was the judgment of the Beirut conference that—

In the face of the responsibility which the international community must share for the plight of the refugee, more is required than temporary relief measures.

It was felt that—

The United Nations, with the full support of member states, must provide financial resources for a program of resettlement and reintegration to be put into effect as soon as governments in the Near East agree with such schemes.

It was also held that—

with primary consideration for human need and freedom from selfish political motives, long-range planning must seek the general establishment of higher standards of living throughout the area, which can be promoted through technical assistance, both multilateral and bilateral.

It is also recommended in the proposed legislation that \$125,000,000 be authorized for economic aid and technical assistance to the Middle East. Of this amount it was proposed that \$23,500,000 be allocated to the Arab States, and a like amount to Israel.

This would seem to me, as I am certain it would to the members of the Beirut conference, to be the rock-bottom minimum of the economic aid that should be available to Arab areas during the forthcoming fiscal year.

The allocation of economic aid, including technical assistance to the Arab States, should be commensurate with the needs of those states. If Israel, with a population of 1,200,000 is to be given

\$23,500,000 in economic aid—and I heartily support this recommendation—it may be questioned whether a like amount is sufficient to meet the economic needs of the surrounding Arab States with a population of 40,000,000, especially since funds in any sizable amount have not been, and are not now forthcoming, available to the Arab community from outside private sources.

Whatever the reasons for this situation, the fact remains that the standard of living among the Arabs is deplorable, and for the refugees well nigh beyond endurance.

Looking beyond the immediate aspects of the problem of the Middle East, the Beirut conference plead for the exercise of the spirit of forgiveness and reconciliation. It is my own view that what is needed to achieve stability in the Middle East and to insure for ourselves and the free nations the enduring friendship of the Arab world is for the United States to display toward the Arab peoples a larger measure of human concern expressed in political understanding and good will.

Economic aid and technical assistance are not enough. Nor will military assistance suffice. It is doubtful that bases scattered throughout the Middle East, amongst 40,000,000 Arabs, many of whom are hostile to the United States, would add substantially to the military security of the west.

Mutual security is derived in larger measure from the spirit of friendship and good will between and among the peoples concerned than from military establishments.

Arabs are proud of their heritage, their culture, their civilization. To recover and maintain inviolate the friendship and confidence of the Arab peoples, as of all peoples in this area, should be one of the priorities of the legislation here under consideration.

Not only in the Middle East, but among Moslem people elsewhere—there are 400,000,000 of them—is our attitude with reference to the distribution of economic aid toward the Palestinian refugees watched with concern.

Chairman RICHARDS. Thank you, Dr. Van Kirk.

I believe I will start down the other end of the table. Are there any questions? Mr. Carnahan?

Mr. CARNAHAN. No questions.

Chairman RICHARDS. Mr. Javits?

Mr. JAVITS. I have just two questions, Dr. Van Kirk. First, may I say that I appreciate very much what you said about our treating the Arab problem with understanding and good will. I join in that thought.

Second, we have some question here as to whether, if additional aid is provided for the Arab States, they will take it and use it. Those who have testified before us are just not very sure as to what the Arab States will even wish to absorb in terms of economic aid. And the figure for them is essentially an extrapolation, a series of assumptions.

Dr. VAN KIRK. I am glad you explained the meaning of that word.

Mr. JAVITS. Thank you. I think you get my point. I am just wondering if you would say just one word about that.

Dr. VAN KIRK. I had the impression, as a result of my observations in these Arab countries—and I must stress the fact that I was there for only 8 weeks—that if there is a disposition to reject economic aid

from the west, it is not so much that they do not feel the need of that economic aid as it is that the economic aid thus tendered is not accompanied by the political understanding and good will which they desire even more than they desire economic aid.

That is to say, if we were to provide the aid along with such manifestations of good will toward them as would accord them a status of equality with other peoples in the Middle East, as would reflect a recognition of their rights and of their legitimately felt needs for economic equality and opportunity, then I think there would be a greater willingness upon the part of these Arab States to receive this aid from the west.

Mr. JAVITS. Do you not feel that good-will gestures would be defined by those who rule in the Arab States only as punitive measures or deprivations with respect to Israel? That is the thing that worries me.

But I always have this concern—and I would appreciate your reassurance on that—that the only thing they think we mean when we say good will, is to do something adverse with respect to Israel. What do you think about that?

Dr. VAN KIRK. I think that the Arab world would like to see the United States exercise its moral influence in the halls of the United Nations to give effect to the resolutions of the General Assembly which look toward compensation and repatriation.

There is a feeling I think among Arabs that the United States has given only lip service to these resolutions and has not evidenced sufficient concern to implement the provisions of the General Assembly resolutions in that respect.

Mr. JAVITS. I notice, though, in your own report of the conference, you say that many leaders in the Near East are beginning to recognize, however reluctantly, that resettlement of these Arab refugees in new homes would be the only practical and possible solution.

Dr. VAN KIRK. I would support Mr. Pickett's observations in that respect. I think the political realities of the situation in the Middle East preclude the possibility of any large-scale resettlement in Israel, and I think the Arab States themselves, the leaders at least among them—not the people in the camps—recognize this to be true. But the people in the camps desperately want to go home.

We visited many of these camps in the Hashemite Kingdom of Jordan, and at each met with a committee of leaders. They gave us petitions and appeals, and they always started out with a declaration that they wanted to go home. Amongst the people in the camps, too, that hope is still nurtured, but I think among the leaders there is an understanding of the political difficulties involved in that operation, and I think they themselves have come to recognize that a program of resettlement in the Arab States is the thing that must now go forward.

Mr. JAVITS. What you think, therefore, is that the prevailing opinion is that we ought to throw our weight behind resettlement and see that the necessary funds are available, including participation by Israel to bring about the resettlement?

Dr. VAN KIRK. I would say that, sir, yes.

Mr. JAVITS. Thank you very much, Dr. Van Kirk.

Chairman RICHARDS. Do you have a question, Mr. Burleson?

Mr. BURLERSON. Doubtless you are familiar with the speech recently made by the Egyptian Ambassador at Princeton University?

Dr. VAN KIRK. I did not read the speech. I have been away for some weeks and I have not had an opportunity to read the press as faithfully as I otherwise would. So I am not familiar with the speech.

Chairman RICHARDS. May I interpose? Have you read the Congressional Record lately?

Dr. VAN KIRK. Not within the past month, sir. I have had a vacation.

Mr. BURLINSON. I was so sure that you, being interested as you are in this question, would have observed his remarks, which to me were very interesting and create a very interesting point of view. The thesis of it was that there was nothing to be done in the Middle East as far as dollars were concerned. And you said practically the same thing except you go on and say that money is necessary but it takes a great deal more than that.

The situation is such that only by the observance of certain fundamentals can the Western World regain its prestige in the Middle East, which obviously has deteriorated during the past several years.

That was the basis of his speech, and I just wondered if you were familiar with it and could comment on it. If not, thank you anyway.

Dr. VAN KIRK. I think if the members of this committee were to visit the Arab countries at the present moment and spend some time talking with their leaders, they would be impressed with the extent to which these Arab peoples feel they have been pushed to the side. They really do not matter very much in the councils of the nations. They feel that they have been bypassed in the United Nations, for example, that their opinions and judgments are not sought.

They feel isolated and alone and apart from the world community.

And I feel that the best step, therefore, that can be taken by the United States to recover the friendship which we once had and have now lost is to identify ourselves with the Arab peoples spiritually and politically and economically with their legitimate interests and aims.

Mr. BURLINSON. Thank you.

Chairman RICHARDS. On this side. Mr. Fulton?

Mr. FULTON. Of course, in many of these Near East countries outside of Israel, the groups in the governments are ruling groups that are hereditary and concentrated groups, are they not?

Dr. VAN KIRK. Yes.

Mr. FULTON. So that really we have in many of those countries a very rich class and a terribly poor or prostrate class. Is that not right?

Dr. VAN KIRK. I am afraid that is true, sir.

Mr. FULTON. And many of these governments then are governments that are still in, you might say, the Middle Ages of Europe, completely feudal, with uneducated masses, very few educated people, and no middle class. Is that not right?

Dr. VAN KIRK. Yes.

Mr. FULTON. Now then would you not recommend that we not closely ally ourselves with that class of government. Anything we might do which will result in the rising of the lower classes will in its essence be revolutionary to the best interests of the top people in their own economy, will it not?

Dr. VAN KIRK. I should hope that any economic aid that was forthcoming to these areas from the United States would be safeguarded at that particular point, that this aid would be forthcoming in ex-

pectation of certain reforms that might be instituted in this area, land reforms, for example, among other reforms.

I do not know whether or not it is feasible through political action to impose upon another people a program of economic and political reform, domestically within one's own country, but I should think that certain moral pressures could be exercised in the appropriations that were to be made for economic aid to these areas that would encourage and lend support to such reform movements as would tend toward a greater equality economically in these areas.

Mr. FULTON. Then do you think the problem in the Middle East is basically a political problem?

Dr. VAN KIRK. Perhaps from within these Arab States themselves it is predominantly a social and economic problem, but the relations of the United States and of the west to the Arab States, that I would say is predominantly political.

Mr. FULTON. Then on the relations between the United States and these Arab States, if it is predominantly political, do you as a churchman feel competent to pass on that question?

Dr. VAN KIRK. As to what steps should be taken to implement this political concern? No; I have explained in my statement, the lack of technical competence in this field, which saves me the necessity of answering a lot of questions that might otherwise be asked.

Mr. FULTON. Very good, Doctor.

Do you think that the aid that we might give, if given generously to show that we have no favoritism, to both Israel and the Arab States, would solve the problems of the terrible enmities of groups within the states and of the terrible enmities among these states?

Dr. VAN KIRK. Well, I think it might tend toward that end. I think the likelihood of achieving that end through a process of technical assistance and aid of the kind contemplated in this bill would certainly lead more directly toward that end than would the absence of such aid.

Mr. FULTON. But do you think it would be worth while for us to try to settle these religious disputes in many of these clan feuds through money from the United States?

Dr. VAN KIRK. I think it would be a fatal blunder to attempt that.

Mr. FULTON. Now, in conclusion, then, it is going to be a long-time problem of development and of raising the educational levels, and of doing what has been many times on this committee pointed out, instituting these pilot plans to show what they can do themselves.

Would you say that is the type of program we should emphasize on a Point 4 basis, or do you say that we should give it to the governments and let them do it themselves?

Dr. VAN KIRK. Well, I would not put it on an either-or basis. It is possible, I think, for both to go forward concurrently.

I would subscribe to Mr. Pickett's point of view, that in the long run the more programs of this kind that can be placed under the aegis of international authority the better it is. I feel that very strongly.

Mr. FULTON. If we are looking at the problems of the United States on a long-time basis, we must seek under this legislation forces in being, and reserves, that have an impact. If that is the case and we can see that Israel has been able to at least get a balance of power in the area, we can see that Israel at least has at the present time equality

with the Arab States on a balanced-power measure. Leaving the future out of it, at least now it has a balance of power; has it not?

Dr. VAN KIRK. I would say preponderant military power. Vis-à-vis the Arab States, I mean. I was in Jerusalem on their independence day just a couple months ago. I witnessed a military demonstration put on there in Jerusalem on that day. And I tell you, the strength that was reflected in that operation must have been of a kind to create in the Arab mind, at least, the thought that there is a preponderance of military strength within the Israeli State as of this present moment.

What the ultimate effect will be on the Arab community, I would not be prepared to say.

Mr. FULTON. If we are looking for friends, the Israeli State seems to be a stable government compared to some of these other governments, does it not?

Dr. VAN KIRK. We have their friendship now.

Mr. FULTON. And, secondly, Israel shows the opportunity there is for progress, because of good commerce laws and really a very adventurous spirit. Is that not correct?

Dr. VAN KIRK. I would subscribe to that wholeheartedly, sir. I was in Israel for a week at the invitation of the Israeli Government, and I desire to bear witness to the very extraordinary advances that have been achieved by the Israeli State in this short period, economically, culturally, and otherwise. It is an extraordinary chapter in history.

Mr. FULTON. Then, if we leave international boundaries out of it, we look to see where we do get the greatest advance, the greatest defense force, and the greatest progress, in giving this aid, do we not?

Dr. VAN KIRK. In what way? I did not hear that last.

Mr. FULTON. In giving this aid.

Dr. VAN KIRK. I have supported the aid to Israel contemplated in this bill.

Mr. FULTON. But I say if the international boundaries were left out of it, we would look for the best results, would we not?

Dr. VAN KIRK. Yes; but I really do not think there is enough military strength in the Middle East, with Israel and the Arab States put together, to weigh very heavily in the total balance. By using a military measuring rod these armed forces could hardly substantially influence the military position as between east and west.

Mr. FULTON. Of course you remember that Israel was one of the balances and real weights in our favor at the battle of El Alamein when they supplied a tremendous amount of equipment and supplies to Allied troops in Africa in World War II?

Dr. VAN KIRK. Yes.

Mr. FULTON. The State Department has come here with a program that exactly makes equivalent the Arab States and Israel on economic aid. Mr. McGhee has said the State Department looked at the varied problems as a matter of need, and then they projected into the future on each of the countries involved.

Now may I have your comment: The State Department looks at Israel and comes up with a figure on all their needs and their future progress and says \$23,500,000. Then it looks at each of the other Arab States all down the line—

Mr. VORYS. I believe the breakdown was in executive session.

Dr. VAN KIRK. I do not know what those figures are.

Mr. FULTON. I am not going to mention what the breakdown is among states, but I certainly see the \$23½ million figure here.

Mr. VORYS. The \$23,500,000 is published.

Mr. FULTON. That is all I am going to say. Have I gone any further than that?

The State Department takes all the Arab States and adds them up one after another on their present needs and future progress, and takes into account the various absorption rates of aid. The State Department then arrives at the same figure exactly to the dollar, of \$23,500,000. Do you think, as a churchman, and as a matter of coincidence, it is possible to reach that result?

Dr. VAN KIRK. No; I do not, and I am certainly not competent on the basis of a very hurried visit to the Middle East to estimate what would be the fair balance of aid as between the Arab and Israeli States. But it would seem to me on the surface of things—

Mr. FULTON. A very strange coincidence?

Dr. VAN KIRK. That in an area that embraces 40,000,000 people would, by reason of their present low standard of living, plus the added necessity of absorbing and resettling the vast number of Arab refugees in their countries, constitute a need that would require—it would appear to me, as a layman—a sum greater than that which would be allocated to Israel. And if it is not political heresy, I would have to disagree with the State Department figures at that point.

Mr. FULTON. It was a strange coincidence that it came out the exact amount, would you not think so?

Dr. VAN KIRK. Yes; I think that is a rather arbitrary division.

Chairman RICHARDS. You are not responsible for those figures.

Dr. VAN KIRK. No, I am not.

Mr. FULTON. Actually, there is \$50,000,000 in this bill for the Arab refugee problem, so if you took it on this basis, it would be \$23,500,000 economic aid and \$50,000,000, or \$73,500,000, for the Arab states as against \$23,500,000 alone for Israel.

Dr. VAN KIRK. Yes, if you added the aid which is contemplated for refugees to the economic aid and technical assistance, then you would have \$75,000,000 roughly speaking, against \$25,000,000. But when you consider the vast number of these Arab refugees, variously estimated up to a million, and you take this \$50,000,000 and divide it by the number of refugees you have, it becomes immediately obvious that \$50,000,000 cannot go far toward contributing toward a permanent program of economic rehabilitation and making a viable economy in the Arab States. That is my point.

Mr. FULTON. But you must also realize the historic difference in the level of living between people who have had a village and nomadic base as against an industrially rising state such as Israel.

Dr. VAN KIRK. That is true.

Mr. FULTON. And in addition you must also take into account that Israel has the very big expense, for example, of flying people in from Yemen, so that the cost of their refugee problem per person in resettling them in Israel has been much higher.

Then we must also take into account that a resettlement in Israel means training, job placement, and a house, while in Arab countries it may mean putting them in a valley, or a village, in a tent, and with a little flock or something of that nature. Is that not correct?

Dr. VAN KIRK. That is true.

Mr. FULTON. Our basis of this legislation of course comes back to the defense of the United States and the defense of this area in relation to our foreign policy. While I know that there are millions and hundreds of millions this evening starving in Asia, as a Congressman from Pittsburgh I do not believe I can vote to give part of the proceeds of our billion dollar tax bill from the Federal Government to take care of all of them. So the population figure is too simple arithmetic.

Chairman RICHARDS. Dr. Judd?

Mr. JUDD. Mr. Chairman, I wonder if we could not be educated, instead of the witness' being educated.

Mr. FULTON. I am following Dr. Judd's—

Mr. JUDD. Good example?

Mr. FULTON. Usual form. I learned that.

Mr. BATTLE. You learned it well.

Mr. FULTON. I try the technique with churchmen, and Dr. Judd tries his on General Marshall.

Dr. VAN KIRK. He has taken his turn at the churchmen too.

Mr. FULTON. I think I would have more chance educating you than General Marshall.

Chairman RICHARDS. We have one more witness here, and we had better move along.

Who is the next questioner, Mr. Battle?

Mr. BATTLE. Thank you, sir. No questions.

Chairman RICHARDS. Any questions on this side?

Mr. JUDD. I want to pay tribute to Dr. Van Kirk for a statement that I think is eminently sound, as well as Mr. Pickett's, particularly in its emphasis on the moral support these people need. That is their greatest hunger. The dollars cannot do the job without that moral support. Of course they cannot live without some calories too.

Dr. VAN KIRK. That is the crucial phase of this problem.

Chairman RICHARDS. Mr. Herter.

Mr. HERTER. Dr. Van Kirk, obviously the amount of money involved varies tremendously. I am tremendously interested in who is going to administer these funds, and how well.

Would you care to comment on the way in which you think funds today are being administered and how perhaps they could be improved, what agencies are doing well and what are not?

Dr. VAN KIRK. While I have followed very understandingly Mr. Pickett's comments with regard to the difficulties that all of these United Nations agencies are confronted with in the Arab States, you just have to see this problem to understand it, to see what it is. You have to see it and feel the tensions there, and the ease therefore with which United Nations agencies are criticized by the Arabs.

But such of the operations that I myself saw in the camps that I visited, I have only the highest praise for the activities of the United Nations Relief and Works Administration. I saw at first hand some of the operations of the United Nations children's emergency fund, for example, and I have no hesitation in saying that of all of the agencies I saw in operation in the Middle East, UNCEF stood easily at the top.

I saw their feeding projects in many of these camps, milk for children, great lines of children waiting for their milk in the mornings,

mothers with their babies at their breast, little children waiting, and good discipline prevalent there, and a fine spirit and understanding. And I want to take this opportunity to pay tribute to the work done by UNICEF in these areas.

Mrs. BOLTON. Dr. Van Kirk, you spoke of the possibilities of pilot plants, and so on. Have you by any chance seen the Arab Development Co. project?

Dr. VAN KIRK. No.

Mr. BOLTON. Have you seen it, Monsignor?

Monsignor McMAHON. Yes.

Mrs. BOLTON. I think a picture of that would be very helpful to us.

Mr. VORYS. Dr. Van Kirk, in looking at the report exhibit 4, adopted there I saw these words: "Only 10 percent are Christians." Does that mean that—

Dr. VAN KIRK. Ten percent of the Arab refugees are Christians.

Mr. VORYS. There are 80,000 to 100,000 Christians among these refugees?

Dr. VAN KIRK. There are about 10 percent, yes.

Mr. VORYS. Now you have heard earlier that it is doubtful whether the Arab States have asked for this \$23,000,000. You have told of their feeling about us in those countries. Israel has asked for \$150,000,000.

Dr. VAN KIRK. That is not a part of the legislation now before this committee.

Mr. VORYS. No, but their request is officially on file, and witnesses have appeared urging the \$150,000,000.

Dr. VAN KIRK. Yes.

Mr. VORYS. If we do not grant that request, will we lose the friendship of Israel; and if we grant it will we lose or gain the friendship of the Arab States?

Dr. VAN KIRK. I am not going to answer that question, because I am really not competent to answer it because this requires an insight, really, to sit in judgment on the inner operations of the minds of the Jews on one side and the Arabs on the other. And I do not have the faculty for doing that.

Mr. VORYS. We have to answer it, and we have not been out there just a few weeks ago as you have.

Chairman RICHARDS. You would call that the \$64 question, would you not?

Dr. VAN KIRK. Yes. And perhaps on the basis of study and reflection upon the matter I might have something to say. But I prefer not to give a snap judgment answer to your query.

Mr. VORYS. Thank you.

Chairman RICHARDS. Thank you very much, Doctor.

Dr. VAN KIRK. May I say with regard to these papers that I left on the table, the message to which I referred is entitled "The Statement of the Beirut Conference." There is appended to these papers—and it may be of interest to some of the members of this committee—to have the judgments reached by the conference in various working sections of the Beirut conference.

Now all of these papers represent the official action of the Beirut conference, and I would call your particular attention to that working paper which deals with recommendations bearing upon United Na-

tions' policies. It might throw some light on the problems with which the committee has been confronted.

Mr. VORYS. Doctor, you did not intend to submit to be printed in the record anything but the statement?

Dr. VAN KIRK. That is all. I will not presume to suggest that the rest should be published. But if it is desirable I would be glad to mail to each member of the committee the entire set of working papers.

Mrs. BOLTON. Would you do that?

Dr. VAN KIRK. Yes.

Chairman RICHARDS. Monsignor McMahon, will you have a seat, sir?

Have you a prepared statement?

Monsignor McMAHON. Yes, I have one here.

Chairman RICHARDS. Will you proceed in your own way, sir?

STATEMENT OF MSGR. THOMAS J. McMAHON, CATHOLIC NEAR EAST WELFARE ASSOCIATION

Monsignor McMAHON. Well the hour is late, and so much has been well said by those ahead of me, so much that I concur in. I concur in practically every conclusion Dr. Pickett stated, and most of the conclusions of Dr. Van Kirk, so that I would be repetitious, except that you may wish to ask me further questions.

Now, my competence lies in the fact that I have been out there in the Middle East directing all the relief activities of the Catholic Church, in both the Arab States and in Israel. Accordingly I have been in that territory for most of the past 3 years, and I have just returned a few weeks ago.

It is an honor and a pleasure to come before you after this long experience.

First of all, I wish to say that those who criticize the United Nations' relief program should have the spirit of Dr. Pickett here. I know the weaknesses and I know the strength of that relief program. But I have collaborated with the United Nations' relief program in every item. We, the Pontifical Mission, have run many milk centers for UNICEF, food distribution centers for supplementary feeding, and we have poor refugee kids in over 330 schools in the relief areas.

We have conducted many works projects and all kinds of activities for Palestinian refugees. Our efforts have been made possible through private voluntary subscription, not by United Nations' money, so we have done a great deal for the refugees and for the United Nations and we have furnished a personnel of about a thousand, mostly indigenous.

In our Pontifical Mission program, I have been one of three foreigners brought in to conduct the work. Most of the remaining workers are indigenous. I purposely kept this system, even in the face of some opposition, and I think this point may help the questioning that follows. I adopted this system on purpose, because I wanted to see if these people can help themselves. And they can.

Some, even of my own, thought I was foolish. Why should we not bring in a great big corps of workers? But I did not, and we got along. It is an evidence of how fine these Arab people are fundamentally. That is something which Dr. Pickett has brought out so

well. When he was out in Gaza I worked with him, and I know the spirit in which the Friends work.

Many of these Arab people are highly professionalized. An honorable Congressman here has already mentioned the Arab Christian people. Most of them have had a fine education. These people want to return to their homes. The more intelligent they are, the more they wish to return to their homes.

Chairman RICHARDS. Did you say most of the Christians, the 10 percent?

Monsignor McMAHON. Yes, most of the Christians. And there are a great many Moslems, very well educated too. Still it is not a question of education—sometimes it is a question of basic culture. Nor would I say that all these Arab refugees are agrarian people. This would be untrue.

When we think of many of the better ones—and these are very fine characters—many are not the truly agrarian type. There are many professional people and, by the way, these are the hardest people for whom to do relief work. It is hard for a lawyer, a teacher, a man occupied formerly in the Palestine Mandatory Government to receive the dole and to get on line as many others do.

Suppose you were to get under a tent yourselves, you would know how hard it is for these people to do so. It was not easy for me to live the life of a relief worker, for it was necessary to try to live like the poor refugees in order to prove that I was really there to work for them.

Now I wish to make one point of disagreement. As a church—and I believe I can speak for the Catholic Church, at least in my capacity as head of her relief activities in the Middle East—we have had a constant policy on Palestine. We claim there still is a Palestine question. All these discussions tonight have merely taken for granted the existence of two portions of Palestine without realizing that the United Nations has not only resolved but also voted certain decisions for Palestine.

Yet nothing is said of that settlement. When the honorable Congressman from Pittsburgh said that a churchman might not want to go in for politics, I might say that the Palestine question is a very high grade of politics. Palestine is the Holy Land in which three rights are involved. The three rights are Jewish, Moslem, and Christian, so that one is not anti-Semitic when he urges the Christian right in Palestine. I do not think one is.

I think this is a point on which we must insist. Here is where the added question of repatriation, of compensation also enters. Speaking of the Israel area and the Israeli Government, I know them very well, nor do I come here with any spirit of animosity, but they do know very well from my own lips that there are three rights in the Holy Land, and the Palestine question is not a political question of the nature in which we have spoken tonight. I am not being apodictic here. Having just come in from the Middle East and having felt its tensions for every minute of the last 8 years, I say you cannot settle the question of the refugees, you cannot get the friendship of these Arab people for the United States or for Britain so long as the Palestine question remains unresolved.

This, so long as you here—and we are mainly responsible, we give lip service to United Nations' resolutions and votes but we do nothing

else—go the opposite way in our policy. Now this is the truth, and you know it. This is the absolute truth.

And I think this, speaking of this security program, as I wrote in my statement, I am heartily in favor of this voting of aid—everyone who has put foot there would have sense enough to be in favor of it—that we must go further if we want security in those regions.

You have the friendship of Israel and you should have the friendship of Israel. But you must get the friendship of the Arab States, and you cannot get it by delaying tactics. You just cannot get it that way. I feel that unless we are willing to implement United Nations' decisions to some degree at least, and then willing to show those poor Arab people over there that they are not being pushed aside, we cannot get their friendship. One might also consider that the Palestinian Arabs were among the best cultured Arabs and that especially during the British mandate these people had a high degree of education with many other advantages. It would be wrong to have any other attitude.

So I ask you to read this statement of mine and then perhaps talk along the lines I suggest here. Dr. Pickett has already said everything that would be needed to be said about these refugees. I am merely giving you the profusion of my despairing spirit after 3 years of working among these refugees.

Mr. MANSFIELD (presiding). Mr. Vorys?

Mr. VORYS. First I ask that the consignor's statement be set out in full in the record.

Mr. MANSFIELD (presiding). Without objection, that will be done. (The statement referred to is as follows:)

STATEMENT SUBMITTED BY MRS. THOMAS J. McMAHON

I am particularly interested in section 201 of title II of the proposed draft of the Mutual Security Act of 1951, as presented in the background pamphlet Mutual Security for Fiscal Year 1952 and in the relevant prefatory pages, especially page 20 entitled "Aid to the Palestine Refugees."

Thus, my competence in answering the gracious invitation of the House committee lies in the fact that, for several years, I have been actively engaged in relief and humanitarian work among the people of the Middle East and that for the past 3 years I have been personally and physically present there to direct the activities of the Catholic Church in behalf of the Palestinian refugees. Accordingly, I am more than deeply interested in the prolongation of every aid possible, on the part of our Government and of every agency, whether public or voluntary, to the Near and Middle East and more precisely to the Arab refugees of Palestine.

That it is absolutely necessary to continue such aid everyone even remotely acquainted with the problem must admit without qualification. We who have worked so long among these destitute Palestinians would view with very genuine horror any other point of view. The Palestinian Arabs are the innocent victims of the warfare that engulfed them and forced them out of their homes, and as the fourth successive year of this tragedy now begins, it find them in the same continuing need, while their state of mind must be described as one of despair. The United States cannot afford to forsake these exiles, and the radical motive for such aid goes far beyond a mutual security program: it is basic justice on our part to keep on helping these hundreds of thousands of innocent victims, of homeless people.

We go well beyond politics when we point out to the designated Representatives of the noble and generous American people that there can be no security in the Middle East until the problem of the Palestinian refugees is solved. The very existence of the problem has caused not only complete privation among the victims themselves, it has also brought about an economic and moral crisis in the Middle East, embittering every honorable citizen of the nations involved.

Now, in all honesty, let it be said that the magnanimous aid of the American Nation will not be the only factor in solving what I consider the most aggravating

problem in the pattern of a hoped-for world peace. By all means, and out of strict justice, let the United States vote as much monetary aid as possible to the United Nations' program for the relief of the Palestinians, but in a greater degree we beg our legislators to see clearly what is involved.

In the very excellent explanations of the Mutual Security Act, you write of the continuance of direct relief, though on a diminishing scale, and of the reintegration of the refugees in the economic life of the Middle East. What have you done for a just settlement of the Palestine question? What have you done to compensate the homeless people who did not give up their homes voluntarily? You will never achieve peace in the Middle East until you have given these hundreds of thousands of people the rights that are most certainly theirs. You have been voting to the UNRWA and its antecedent agencies a respectable aid each year since the problem began, but it is another thing to solve the problem at its roots.

We must not think of the Palestinian refugee as unkempt, almost unworthy objects of charity. Among these good people the number is legion of those who are wonderfully trained, well cultured, genuinely moral, men and women who could take their places with you and with us all in any walk of life. Why, then, should we speak of a dole for such as these? In the name of God, let the representatives of the American people examine the roots of the Palestine question and seek to make some reparation for man's inhumanity to man.

Let us by all means vote the aid that has been determined for the refugees of Palestine. Since it is all too little with which to solve the problem, it is our bounden duty to go much further and try to end the restlessness, the misery, the homelessness of these poor people. There is no doubt that men of good will in this country will thereby make the Middle East as much a part of the free world as we are.

Mr. VORYS. How many Christians are there in Palestine, in Israel, now?

Monsignor McMAHON. Christians in Israel? Fifty thousand.

Mr. VORYS. Fifty thousand; and eighty thousand to one hundred thousand refugees?

Monsignor McMAHON. Yes.

Mr. VORYS. Well, could I ask you the \$64 question, which is lying on this table for us to decide and has been appropriately presented here as to whether it would help the total picture out there for us to grant, say, \$23,000,000 of aid to the Arab States, and \$50,000,000 for the Arab refugees, and then grant \$150,000,000 to Israel?

Monsignor McMAHON. Well, I am not much of an economist. I have been spending other people's money in the Middle East for the last 3 years and more than that, for I have been engaged in Middle East work for the past 8 years. But I cannot answer your question; I do not know what you are going to do with this money.

I have read the statements, but I would rather evade the question. I think that is right in your laps. Still I say this: Just as the honorable Congressman from Pittsburgh asked, I do not know why, speaking for the Arab States, the figure exactly balanced. I know they can use \$23,000,000 very well, and \$50,000,000 very well, for the purposes determined. Otherwise, I cannot say which should have this and which should have that. It is too much for me to say.

Mr. MANSFIELD (presiding). Mrs. Bolton?

Mrs. BOLTON. Monsignor McMahon, I wonder if you could give us a picture of the Arab Development Co. project. We have been so inclined in this country to accept the idea that Arabs cannot farm, that Arabs cannot do for themselves.

You say that you found them so able to take care of themselves. Would you enlarge on that a little?

Monsignor McMAHON. Yes. The Arabs do need equipment. Of course, if you compare the State of Israel with the average Arab state, the absence of tractors in the Arab States is to be remarked.

Mrs. BOLTON. Certainly.

Monsignor McMAHON. The Israel State is much better equipped technically. The Arab Development Co. is a small project, you know, because it lacks funds.

You refer to Musa Alami, do you not?

Mrs. BOLTON. Yes.

Monsignor McMAHON. As someone here already mentioned pilot projects, it is to be noted that there are a few around the Arab States. I might remark the work of the Near East Foundation in Syria, and we, too, have tried such projects in different areas.

On a small scale these are great things, but remember that funds are lacking for anything on a large scale, and such a program as the Arab Development Co. is not government-inspired, it is an individual attempt and for us very encouraging, for Musa Alami started before the United Nations works projects idea came along.

Mrs. BOLTON. And what has he done there?

Monsignor McMAHON. Small housing projects, for example, with plots of ground around them. That is the beginning of anything in the Middle East, a home.

Of course, I would like to bring out the point that we must not think of all the refugees as being in camps. In the Gaza area, it is largely camp life, but elsewhere I would say that about 30 percent only of the refugees are in camps. Although we too run camps, as does the United Nations, the greater number of the refugees is still in housing, in permanent buildings.

Mrs. BOLTON. In barracks or homes?

Monsignor McMAHON. We have built barracks, but we also have many refugees in houses, particularly religious houses that could be made available. In Jerusalem there are still some hundreds so situated.

While we are speaking of refugees, we should also remember that this situation has brought on a complete crisis in cities like Jerusalem, partly in a city like Beirut, while Gaza is a perfect example. The poor have become poorer than the refugees.

As to schooling, I think that about 60 percent of the children in our refugee schools are Moslems. And we support these schools on a voluntary subscription basis, not by United Nations' funds.

To return to the pilot projects, they are the beginning of something very good, and they should be encouraged. But I am dead set against a plan of resettlement because I know these refugee people will always balk at this, unless you can prove otherwise to them. Although they may feel they will never return to their homes, they do want to go back.

Mr. Judd. You say you are dead set against a plan of resettling?

Monsignor McMAHON. Yes, I am. I say this because this whole problem cannot be solved until the basic—let's use the word "political"—problem of Palestine is solved.

Mr. Judd. Well you said in your statement, an excellent statement by the way, "let the representatives of the American people examine the roots of the Palestine question and seek to make some reparation

for man's inhumanity to man." Would you help us for a moment examine the roots?

Monsignor McMAHON. I say that the Palestine question, both in resolutions and in votes, is already on the record of the United Nations. Take one question—the internationalization of Jerusalem, voted by the United Nations but not settled.

Now as to the question of boundaries; you say the boundaries are more or less fixed. But are they fixed? This is an armistice.

We might also remark that the thinking on the question of getting people back to their homes has changed in those regions. Dr. Pickett will remember when the Israel Government was thinking of admitting about 80,000 Palestinian refugees from the Gaza area. That was the thinking over a year ago. Now the thinking is not that. There has been some attempt to reunite families, and perhaps 2,000 people came back particularly to the Nazareth-Haifa area, from Lebanon and Syria. Thus there has been some repatriation.

There are other problems within Israel's boundaries because of the war. Some Arab towns have been displaced in their populations within Israel. The people are not in their original villages. There have been negotiations with the Israeli Government on a personal basis.

Can there be more repatriation? I do not know. The State of Israel was more willing, say a year ago, than it is now, possibly because, as it has been suggested here, the influx of their own refugees has been so surprisingly greater than they had expected.

Mr. JAVITS. That is correct.

Mr. JENN. You have three possibilities: Repatriation, resettlement, or leaving them as they are?

Monsignor McMAHON. Yes.

Mr. JENN. I grant you that resettlement is not ideal, but since repatriation of all of them does not seem to be in the cards surely we have to recognize that resettlement may be one of the hard, unpleasant alternatives we must prepare for, rather than leave them as they are.

Monsignor McMAHON. I bring another element in there. Is the question of Palestine itself settled? You cannot talk of resettling people who could be standing on their own ground right now.

There is a section called Arab Palestine in the original United Nations' decision, the Palestine partition plan of 1947. According to that, there were also to be 400,000 Arabs in the State of Israel. There were to be that many within the boundaries of the new state, and the rest of the Palestinian Arabs were to be on the Arab Palestine side.

Mrs. BOLTON. What has happened to all of them?

Monsignor McMAHON. The war pushed the boundaries much farther than the UN Palestine decision called for.

Mrs. BOLTON. Disregarded by both?

Monsignor McMAHON. Nothing is settled.

Mr. JENN. Is it your suggestion that for the present at least, the United Nations should insist on the boundaries fixed in its resolution of November 1947, as I recall.

Monsignor McMAHON. What I say is that the United Nations had better solve something before we try to solve the resettlement of the people. We have to solve the Palestinian question first. That is what will agitate the Arab world until the crack of doom.

Mr. JUDD. You have to have fixed boundaries. That is a part of your point?

Monsignor McMAHON. And you see the new State of Israel now has about 150,000 to 170,000, about that much, if you count the triangle group that came in.

Mr. JAVITS. The group of Arab repatriates.

Monsignor McMAHON. In the realm of things unsettled, be it noted that Gaza is under military occupation of the Egyptian Army, not strictly belonging to Egypt. There are other military zones. Nazareth, technically, is under military occupation.

Mr. JAVITS. Will the gentleman yield to me?

Mr. JUDD. Yes.

Mr. JAVITS. I want to ask a question on this point: Do we still have a hard core of resistance through the military occupation on the part of the Arab States that occupy areas of Palestine, while Israel clings to its forward areas?

Monsignor McMAHON. Yes. I speak with no animosity to either side, but the problem remains unsolved, and you are putting the cart before the horse.

Chairman RICHARDS. Well, let me ask this question: Is it a fact that both the Arabs and the Israelis refuse to adhere to the decisions of the United Nations in these boundary disputes, or are they both equally guilty?

Monsignor McMAHON. I cannot speak of the Syrian affair. I am not familiar with it. But we know that the Jordan Government and the Israel Government refused on the question of an international Jerusalem.

Chairman RICHARDS. Yes. Mr. Vorys?

Mr. VORYS. But we are pouring \$23,000,000 in there. Will that solve it?

Monsignor McMAHON. No, it will not solve it. I will put it just as strongly as I wrote it: We have an obligation in justice, and that is why we speak of an international relief program. It is a United Nations job. We are part of the United Nations. We cannot afford to let that job go.

Mr. FULTON. Will not the start in the Near East of an over-all program that helps them raise their standard of living and gives them some measure of justice be a good start and be in the best interest of the United States?

Monsignor McMAHON. Did you say what would be a good start? Or would this be a good start?

Mr. FULTON. Would not a sizable program in the Middle East, regardless of the boundaries?

Monsignor McMAHON. Yes, but I am talking of questions of resettlement. Regardless of boundaries, surely such a program will be valuable. But you cannot settle this question ultimately, this question which we seek to settle ultimately, until the question of Palestine is settled.

Mr. FULTON. Then you are agreeing really with the Beirut conference when they say on page 3 of their record: "In the last resort the problem could only be solved in the realm of politics." And that is what I was questioning the doctor a little bit about on his political angles.

Monsignor McMAHON. Yes; well, it is high grade politics.

Mr. FULTON. Going a little further, the question then is, for example, what we are calling on the people of this country to do. You ask this question in your statement: "What have you done to compensate the homeless people who did not give up their homes voluntarily?" That is on page 2 of your statement.

Monsignor McMAHON. That is right.

Mr. FULTON. Well, I must say that so far we have done nothing, and I do not see that we have any direct legal obligation to do anything, or moral.

Monsignor McMAHON. There is where I must differ with you. I say that we as a part of the United Nations voted the partition of Palestine. We have continuously gone along on this policy of the United Nations. Now, why have we not the responsibility?

Mr. FULTON. The background of your statement assumes then that the decision of the United Nations had an injustice in it that we might have partially caused. I disagree with you because I thought the decision of the United Nations was pretty fair and had no injustice in it. This legislation is what we are doing for the world abroad. Now, do you think there is a further burden?

Monsignor McMAHON. Yes, I do. We were talking about a moral obligation. You said there was no moral obligation. I say there is. I say there is a profound moral obligation.

Mr. MANSFIELD. If you did not make a statement like that, you would not be worth the cloth you are wearing, and, of course, you are.

Monsignor McMAHON. No. But aside from that, I speak as an American citizen.

Mr. FULTON. Do you not think our Nation, as a member of the United Nations, would be interested in advocating, for example, that Israel comes up with just compensation for the people who have abandoned their property and lost it?

Monsignor McMAHON. They will get nowhere. This has been talked of for 2 years. Still there is no move toward it. You see that there is no move toward these things, compensation or anything else.

Mrs. BOLTON. Mr. Chairman?

Chairman RICHARDS. Mrs. Bolton.

Mrs. BOLTON. In this whole problem, is not our static situation in this country due partly to the fact that the people of this country know very little about the problem? They know very little about what is going on. They do not know the background of it. How many of them ever realize that it is just a few years since the Arab population came out from under the Turks?

Many years ago I was in Jerusalem on an Easter Sunday, when they tripled the guards of Turkish soldiers to keep peace among the Christians.

Monsignor McMAHON. Well, we have a way of fighting on feast days.

Mrs. BOLTON. What I am getting to is this: Is there not some way for your church and the other churches to see to it that there is more understanding of this problem?

Monsignor McMAHON. Among them, you mean?

Mrs. BOLTON. No, here in this country.

Monsignor McMAHON. Well, we try hard. I can shake hands with a good Quaker or a good Episcopalian any time.

Mrs. BOLTON. But you do not get to the people with the information.

Monsignor McMAHON. We do. We have done a lot of getting to the people.

Mrs. BOLTON. That is what I want.

Monsignor McMAHON. From the relief angle, we are running a voluntary program. It is awfully hard to get money. And in the beginning, when the United Nations started its official program over there, you may remember how hard it was for us to raise anything, because everybody said the United Nations was paying the whole freight.

Now, do you realize that the voluntary agencies have spent easily \$10,000,000, and they have given personnel more numerous than the United Nations?

Mrs. BOLTON. And some of the Arab States have given millions of dollars' worth.

Monsignor McMAHON. So it is not a question of trying to get together or of getting to our people. I have stumped this country for years to get aid for the Middle East. There is, as you say, an ignorance about the Middle East. The new State of Israel has focused our attention on the Middle East more than was ever done before.

I say candidly that I would like to see complete peace over there instead of an armistice, because it is a powder keg. And we do know of the need for security in that area.

Mrs. BOLTON. We need the security and friendship of those people.

Mr. FULTON. Could I say that I have noticed the church's program and believe you are doing fine Christian work. You are greatly to be complimented on all you have done in the Near East.

Mr. MANSFIELD. May I say something for practically the first time this evening?

Chairman RICHARDS. Mr. Mansfield.

Mr. MANSFIELD. Mr. Chairman, I think that we have had a very illuminating session here, with witnesses like Dr. Van Kirk, Dr. Pickett, and Monsignor McMahon. And I think they have given us a lot to think about. They have laid before us a lot of information that some of us, at least, did not know too well.

Monsignor, you mentioned the fact that the relief program undertaken by the church under your direction has been entirely voluntary.

Monsignor McMAHON. Yes.

Mr. MANSFIELD. And that you use to a large extent the indigenous population over there wherever you can to do the necessary work to carry on the program?

Monsignor McMAHON. Yes.

Mr. MANSFIELD. To what extent do you use Sisters?

Monsignor McMAHON. Well, in the schools and in the hospitals, especially in the hospitals. We have several big hospitals where we give free care to the refugees and poor. The Sisters get no recompense except their living quarters, their food, and the clothes they wear.

Mr. MANSFIELD. And are these Sisters from orders in the United States and other countries? Or are they indigenous?

Monsignor McMAHON. We have fine indigenous groups, and we have groups from many countries. In Jordan, for example, we have a completely indigenous group, Arabs.

Mr. MANSFIELD. It is safe to say that on the basis of contributions made by the church and the applications of those contributions under

your direction, that generally speaking a great deal more is being gotten for the church dollar than let us say for the UN dollar.

Monsignor McMAHON. I think that is of the essence. That is the only way we could operate. I as head of the mission have no salary, and the others are in the same situation. The Friends do the same thing on a purely voluntary basis, with just a living?

But we do have lay workers who are paid. These must be Palestinian refugees. For example, in our refugee schools the teachers were formerly such in Palestine. And we have undertaken considerable building in order to give work.

Mr. MANSFIELD. That is at least one way of giving a sense of independence.

And one final word: I want to say that even out in Montana where I come from, in our parishes out there once in a while we hear about the Near East, and we hear various kinds of requests. I hope, Monsignor, we have been doing our share.

Monsignor McMAHON. They do all right out there.

Chairman RICHARDS. Any other questions?

Mr. JUDD. Just one minor question: Regarding your statement about the 10 percent who are Christians, are they people who belong to families that for decades or centuries have been Christian—not recent converts?

Monsignor McMAHON. Oh, yes. You have crusaders' names among them.

Mr. JUDD. Are they largely in separate communities, or are they intermingled throughout the population?

Monsignor McMAHON. The Middle East is a great place for exclusivism. That is something that discouraged me as an American, but it is necessary. You see, they vote by community, and that was their form of protection under the Turks. This community life endures among the Arabs and it is to be found among the Jews. Just as the Arab Christians have their orthodox communities, their Catholic communities, so among the Jews there are the degrees of orthodoxy and the reformed. This seems to be Semitic.

Mr. VORYS. But these 100,000 are Semites?

Monsignor McMAHON. Yes.

Chairman RICHARDS. Mr. Javits?

Mr. JAVITS. I want to make one statement, very sincerely and deliberately: I would like to express my expectation and hope for peace in that area, and to assure you that I will do everything I humanly can to help bring it about.

Monsignor McMAHON. Thank you very much, Mr. Javits.

Mr. CARNAHAN. Mr. Chairman?

Chairman RICHARDS. Mr. Carnahan.

Mr. CARNAHAN. I would just like to say that I appreciate the information and the insight that Monsignor McMahon has brought to us, and the other gentlemen who spoke tonight. I would like to ask if your work has brought you in touch with both the Arab refugees and the Jewish refugees?

Monsignor McMAHON. Yes; because I have been in and out of the State of Israel as often as I have been in the Arab countries, and I have been in the State for a period of 2 or 3 months at a time.

This being a 3-year operation on my part, I have been all through the State of Israel and have seen Jewish camps.

So I think I am as well informed as to the living conditions on both sides as any man that has been over there.

Mr. CARNAHAN. I appreciate your statement from both sides.

Chairman RICHARDS. Thank you, sir, very much. We appreciate your coming in.

The committee will now stand adjourned.

(Whereupon, at 10:25 p. m., the committee adjourned until 10 a. m. the following day.)

THE MUTUAL SECURITY PROGRAM

FRIDAY, JULY 27, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the House Foreign Affairs Committee room, the Capitol, at 10 a. m., Hon. James P. Richards (chairman) presiding. Chairman RICHARDS. The committee will come to order, please.

Ladies and gentleman, before we go on with Mr. Bissell, here is the situation on the floor. We have the resolution terminating the state of war with Germany coming up at 11 o'clock. I do not think there will be much debate about it. It will probably take 15 minutes to decide it. The Clerk can keep us informed on that. I do not know how many members of the committee want to be down there. I know some do. Maybe we can get through with it in 30 minutes. I have not heard of anybody on the committee who has asked for an hour, except Mr. Javits.

Mr. VORYS. Is it an hour for the rule and then an hour for general debate?

Chairman RICHARDS. Yes. I do not think he will take more than 5 or 10 minutes on the rule. Then we will have an hour, and we want to cut that to a half, if we can. I know I have to be down there. If we have any trouble, we could let the members of the committee know. Two or three members have told me they would like to be there. Certainly I wish two or three from each side would be there. What do you say about that? I do not want to miss hearing Mr. Bissell either, and I do not want to cut into his time.

Mr. VORYS. Mr. Chairman, I think that is overdoing it, to have the same committee try to run a hearing and have a bill on the floor at the same time.

Chairman RICHARDS. I am against it.

Mr. VORYS. You are going to have to recess. The way we are going to find out if there is trouble is when we run into it.

Chairman RICHARDS. Suppose we go on as far as we can, then we will just recess until after lunch, or, we may be able to recess for 30 minutes.

Mr. Bissell, we will go ahead with your testimony.

STATEMENT OF HON. RICHARD BISSELL, DEPUTY ADMINISTRATOR, ECONOMIC COOPERATION ADMINISTRATION—Continued

Mr. BISSELL. Mr. Chairman and members of the committee—

* Chairman RICHARDS. I think you had gotten down to the figure business.

Mr. BISSELL. I was getting pretty close to the figure business.

I will try not to repeat myself, but I will ask for that privilege for about a minute to get this straightened out.

The first matter I discussed yesterday, on which I would like to be just as clear and concrete as I can, is the relationship of economic assistance to rearmament in Europe.

I would like to put the point in this fashion—

Chairman RICHARDS. That is a very important point.

Mr. BISSELL. Yes, sir. In order to rearm each of the European countries next year, it is going to be necessary to spend more money. We hope they will increase their military expenditures.

(Discussion off the record.)

Mr. BISSELL. The figures are all on these papers, Mr. Vorys.

Chairman RICHARDS. Are you going to submit the paper for the executive session record, or is that material restricted?

Mr. BISSELL. Most of this, sir, is not restricted in any way. There is one table in here in which certain of the figures are restricted, that is to say, they are available now to all members of the committee, but they should not be in the record.

Chairman RICHARDS. You mean, they should be in the executive session of the record so we could study them after this?

Mr. BISSELL. I think there would be no objection to that.

Chairman RICHARDS. We would like to have the whole thing in the record.

Mr. VORYS. Do you have copies of what is not restricted?

Mr. BISSELL. The figures are all in this paper that you have, this mimeographed document.

The only figures that I am aware of in here which should not be published are figures on men on active military duty, which is one line in one of the tables.

Chairman RICHARDS. I would like to say to the reporter that we want all these figures in the record. After you look over them, let us know and we will mark the ones that are not for publication.

Mr. BISSELL. I am not sure that we may not be able to release those figures for publication, but we cannot at this moment.

Chairman RICHARDS. Do the best you can.

Mr. BISSELL. Other than that, I think all the figures in here can certainly be put in the executive record, and I think can be published.

Mr. VORYS. Is that the same as this?

Mr. BISSELL. Yes; it just has a different cover. I am now looking, sir, at what is called the summary for 13 countries, their internal accounts.

I am sorry that the pages are not numbered.

Mrs. BOLTON. That would have helped mightily.

Mr. RIBICOFF. I wish next time they could be numbered.

Mrs. BOLTON. I think they should be tagged and labeled.

Mr. VORYS. And then we would not have to wait 3 weeks to find out where it is. We have a summary for 14 countries—

Mr. BISSELL. This is the table, Mr. Vorys, "Internal accounts, 13 countries."

Mr. VORYS. "Internal account projection"?

Mr. BISSELL. That is correct, sir.

Chairman RICHARDS. I wish the staff right now would mark these pages. You can go around and get them one at a time, if the members can do without them, because we really need that.

Mr. CRAWFORD. We will have to mark Mr. Bissell's, also.

Mr. BISSELL. Mr. Chairman, I am very sorry these were not properly marked. I am going to try to refer in my statement only to this page and the following one. I hope this morning we will not have any more trouble.

Mr. Chairman, the figures I have referred to are in the last line of this table, which we have discovered and identified with such difficulty, for military expenditures for this group of countries.

(Discussion off the record.)

Mr. BISSELL. These countries must also, of course, put more men under arms. You will notice in line 11, figures for the men on active military duty. Those are figures that are averages for the year. They do not give you information on any specific time. They are figures that are relevant for the economic case.

(Discussion off the record.)

Mr. BISSELL. In addition, in order to rearm, these countries, of course, have to expand their military production, because a good part of that increase in their expenditures goes to purchase goods and services, to pay for construction and the like, and they have to expand, as any rearming country does, their military consumption. In other words, more of their food, textiles, and so forth, go into military usage.

I can give you figures which are not in any of the tables that you have. I will give them in my testimony. As an example, included in this increase in military expenditures is an increased expenditure for major matériel from just under \$1 billion in the past year to \$2¼ billion in the new year.

(Discussion off the record.)

Mr. BISSELL. Those are simply the components of the total. That, then, is, expressed in terms that are relevant to the economic impact on these countries, what the job of rearmament means.

Very obviously, if these countries are to spend this additional money, increase their military production, put more manpower in their forces, this means that productive resources must be taken away from other uses, or productive resources that are now unemployed must be put to work.

It means that goods, and especially raw materials, have to be diverted from other uses. It means in more general terms that rearmament either has to come out of increased production or it has to come out of other purposes, that is, come out of reduced consumption and reduced investment.

A basic principle of the program that we have here laid out before you is that the extra European military effort must come substantially out of increased production. I want to come back to that later.

When we come to this country by country, you will find that in three of the countries, the Netherlands, Denmark, and the United Kingdom—

Mr. VOYTS. Say that again.

Mr. BISSELL. That the major part of their additional military effort has got to be met out of increased production rather than out of reduced consumption or reduced capital investment.

(Discussion off the record.)

Mr. BISSELL. We expect that the best measure of the total increase in production in the whole group of countries is the increase in their gross national product from year to year. That is shown in line 1 of the table.

As you can see, that is an increase of approximately \$7 billion. There is a major part of that that goes into the increased military expenditures that I have already mentioned.

Another part of it goes into increased consumption, largely in Italy and Germany, the two countries I have mentioned.

I repeat, I want to come back and say a word or two more on this point in just a moment. But, first, let me go on from there.

As I mentioned yesterday, sir, these countries are, all of them, in varying degrees, dependent on foreign trade, but all of them much more so than the United States.

For that reason, increased production across the board, which is what we believe to be essential if the countries are to rearm, inevitably means increased imports.

In fact, in terms of constant prices, that is, ruling out the effect of price increases, it is our belief that their imports from the rest of the world will have to increase by approximately \$500 million from the last year to this. This figure is not in the table before you. I am reading from a table that I have for my own testimony.

The increase is from approximately \$0 $\frac{1}{3}$ billion of imports in the fiscal year just ended to a little over \$1 $\frac{1}{4}$ billion of imports in constant prices in the new year. That increase, including the United Kingdom, from all sources, is about a quarter of a billion dollars. I think I gave the figure incorrectly a moment ago.

The major part of that increase is an increase in imports which will have to be paid for in gold and dollars.

Mr. VORYS. You have given three different ones. The increase from 11.1 to 11.250 is 150. You said 500 million, 250 million, and your subtraction of the two figures gives 150 million.

Mr. BISSELL. I will give you the exact figures, Mr. Vorys. The exact figures are 11.134 to 11.278—you are right—which is approximately \$150 million increase in constant prices.

The part of that that is in gold and dollars is from \$4.250 to \$4.775 billion, approximately, a \$225 million increase in imports that have to be paid for in gold and dollars.

I think it is not necessary for me to expand at length on the reasons why this kind of an increase in imports must necessarily accompany a general increase in production, industrial and agricultural, in these countries.

For this group of countries as a whole there is approximately a dollar of imports from outside of Europe, that is, from the rest of the world, for every \$10 of their gross national product.

Since that gross national product, their total production, is increasing by about \$7 billion, on the whole this increase in imports that I have just mentioned to you, is an extremely modest one, and far less than the increase that would come about if they did not economize on their imports in every way.

Mr. JAVITS. Would you mind a question? I gather that the \$500 million you are talking about comes with the necessity for gold and dollar imports, because they are going to buy different things, let us say, tin, instead of something else?

Mr. BISSELL. That is right.

Mr. JAVITS. Who is that going to go to?

Mr. BISSELL. I can give you the—

Mr. JAVITS. I do not mean in the table. What is the principle involved; where is the money going?

Mr. BISSELL. Most of the increase in the money they spend in gold and dollars for imports will go to this country, Canada, and Latin America. Some of their imports from other parts of the world will be in there, but in the main their imports are from the Western Hemisphere.

Mr. JAVITS. Can you give us a schedule of that, so we will know how much we are going to get back?

Mr. BISSELL. I can do that.

(The information requested has been supplied for the executive session record.)

Mr. VORYS. Just a minute. I do not gather anything like you gathered. I gathered \$500 million was a mistake.

Mr. JAVITS. I think I understand it.

Mr. BISSELL. The \$500 million was a mistaken figure, Mr. Javits.

Mr. JAVITS. What about the \$4.2 billion and the \$4.7 billion?

Mr. BISSELL. I am sorry. That is the figure for gold and dollars.

Mr. VORYS. That leaves 225.

Mr. JAVITS. It is \$500 million.

Mr. VORYS. He had \$4.2 billion to \$4.7 billion, which equaled 225 additional gold imports.

Mr. BISSELL. My subtraction is wrong again, Mr. Vorys. That is \$4.250 to \$4.775. Those are the correct figures.

Mr. JAVITS. As I understand it, they are buying different things that take more gold and dollars than they had to use before, although the aggregate has only increased \$175 million, the things for which gold and dollars are needed have increased \$500 million?

Mr. BISSELL. That is correct. Generally, as to the composition of Europe's imports, I think the committee knows they are predominately food and raw materials. It is for that reason that an increase in imports is necessary if there is to be a general across-the-board expansion in industrial production.

The reason is, in short, if there is to be more industrial production in Europe, Europe has to import more raw materials. Most of this increase is in raw materials rather than in foodstuffs.

A second consequence of the increase of the rearmament process in Europe, the increase in production that we believe to be necessary to sustain it, and the diversion of resources and of goods to military purposes, is to limit the possibilities for an increase in exports in Europe.

Specifically, rearmament will directly divert and use economic resources that would otherwise be available to produce exports. The examples of that are clear.

Rearmament means, among other things, large domestic orders for the metalworking industries in those countries, as it does here.

Those so-called engineering trades have been among Europe's largest earners of foreign exchange.

We have allowed for a sizable increase still in the export of the so-called engineering industries, notably from Germany, where there is unused capacity. But in most of the countries of Europe, those exports cannot increase, they cannot even be maintained.

Moreover, rearmament will indirectly affect the ability of Europe to export, mainly because rearmament is going to generate inflationary pressures in the European countries, as it does here.

Those inflationary pressures, which in specific and concrete terms simply mean a seller's market within the European countries, obviously will suck resources into their domestic markets and make it much more difficult to maintain exports.

Mr. CARNAHAN. Let me ask here if I get you straight. Is the purpose to reduce exports or just prevent the exporting of the extra production that you are aiming at?

Mr. BISSELL. Substantially, sir, we believe this will prevent the export of the additional production. Actually, and I will try, Mr. Vorys, to quote my figures with a little less confusion this time, we believe in terms of constant prices, exports from the whole group of countries will decline, but only from \$8.2 to \$7.9. In other words, about \$300 million.

All of that decline is substantially accounted for by the United Kingdom which, as you know, is not a recipient of any aid. If you are to leave the United Kingdom out, there is in fact a small increase of exports. This is to all destinations outside Europe itself.

If you turn to the gold and dollar trade, the decline in exports from this whole group of countries, including Britain, is from \$2.450 billion to \$2.380 billion, a decline, you see, of \$70 million.

Leaving out England again because it is not proposed that that be a recipient of aid, the decline is much smaller. It is from \$1.422 to \$1.406 billion.

What we are allowing for here, and hoping, is that the European countries can substantially maintain the physical volume of their exports.

The continental countries will slightly increase the physical volume; the UK will slightly decrease the volume. But the facts which I have mentioned would prevent what would otherwise be a substantial increase.

Mr. CHIPERFIELD. I have not gotten beyond the first paragraph of that document. Under I, National Accounts, interpret to me that last line, "1 divided by 9a divided by base year." What does that mean?

Mr. BISSELL. It means the figure in line 1 for gross national product divided by the figure in line 9a, which is employed labor force, and that in turn put in terms of an index to show the change in output per man.

Mr. CHIPERFIELD. "2, net foreign balance on current account in all currencies." It says, "Total, plus is deficit; minus is surplus." Read the last line of that, "Resources received from plus or contributed to minus OPC, 6b (2)." What does that mean?

Mr. BISSELL. Mr. Chiperfield, there are no figures on line 2b, and I think we could drop that entirely out. On 2a, the first line of the figures that is actually here measures the deficit or surplus in the total foreign trade of these continental countries.

There is a reason, which I think is not too illogical, for saying we will call a deficit a plus. We are considering this as a measure of the inflow of goods added to these economies.

Therefore, when they have a trade deficit, which means they are importing more than they are exporting, it means we, or somebody

else, are adding to the total goods that are available for rearmament and other purposes.

And for this particular purpose we have shown that as a plus item. It is an increase in the total volume, the total flow of goods and services that can be used for various purposes.

Mr. CHURFIELD. I graduated from Harvard, but I guess I was only exposed to it.

Mr. VORIS. Can I ask a question? There are two tables here headed at the top, "Internal accounts projection, amounts in million dollars, footnote 2." One starts out, "Gross national product, base year, 1930-51, 133,460; 1951-52, 140,510," and the next page starts out, "Gross national product," with the base year 1930-51, 99,668 and 1951-52, 103,701.

That 103,701 figure is the figure that has been used in other tables we have been furnished to compare with the figure of 330 which was estimated for us.

Mr. BISSELL. The second of the two tables you refer to, sir, covers the non-NATO countries. The first one covers all of the participating countries.

There is under footnote 1, on each table, a list of the countries covered. The first table includes Austria, Germany, Greece, and Turkey, all of which are omitted from the second table. Of course, Germany is the largest and most important of those that are omitted.

The two tables are parallel in every respect, but they cover the two sets of countries.

Mr. VORIS. Is the first one, roughly, ECA, and the second, NATO?

Mr. BISSELL. That is correct, sir. There are certain ECA countries that are omitted even from the first table, notably Portugal and Sweden, because aid to both those countries has been suspended.

For that reason, we thought it was not necessary to include them here.

I would like to continue and complete very briefly my initial remarks.

I think I can summarize what I have said about exports and imports in this fashion. The specific and concrete purpose of economic support to these European countries next year is to enable them to expand their imports by the amounts that I have indicated. Unless this is possible for them they will not be able, we believe, to achieve the general increase in production that I have also referred to in these figures; and we believe that rearmament will be impossible.

One could put that in more general terms and say it is to enable these countries to draw on the resources of the rest of the world to add to their own. I prefer the concrete form of statement that I have used.

In my explanation of this point, I have, I think, passed over what is really the basic question on which you will have to pass a judgment in deciding whether our estimates are acceptable or not, that is, the question why it is the Europeans cannot do more out of their own resources.

Concretely, why is it they cannot take more out of their own consumption or more out of their own investment? Why cannot they do more of this by simply diverting the flow of goods and services instead of expanding production as a whole?

There are, briefly, three reasons, I believe, why they cannot do more. I think these are the crucial points in this case.

First of all, in certain countries especially, although this applies in some degree to all of these countries, we believe it would be impossible for them to cut consumer goods production below the general levels here indicated without having serious internal inflation, with all of its inevitable consequences.

The countries to which this particularly applies are France, Belgium, Germany, and Italy.

The circumstances, of course, vary from country to country. You will notice, if I may refer again to the one table I have been referring to, that we believe these countries are going to have to increase their budget deficits. This is shown in line 13 as a total for all of them, from approximately 3 billion in the year just ended to nearly 5½ billion in the new year.

Naturally, that judgment about the increase in their budget deficits rests in turn on a judgment about the amount of money they can collect in taxes.

As you will see from line 12 of that table, we believe they can increase their tax revenue from \$30.7 billion to just under \$34 billion. That figure for 1951-52 is going to be about 24 percent, or just under a quarter of their gross national product, taken in taxes.

It is equivalent in this country to about \$75 billion of taxes, although, of course, the figure is not perfectly comparable by any means with merely a United States Federal tax figure. I do not want to suggest it is. That will give you some idea of the order of magnitude.

It is our conviction that for a variety of reasons, which I think are better discussed country by country, that this is about the practicable limit of the taxes that can be raised in these countries. And, therefore, to build their expenditures up as much as shown, their budget deficits will have to increase in the fashion indicated.

Not only is that an important factor in the inflationary situation in these countries, but there is another that is related to it. In especially the four countries that I have mentioned, France, Belgium, Germany, and Italy, there is going to be either a sizable increase in the number of people employed, and that is true of Germany and Italy, where there is a lot of unemployment, or there is going to be a sizable increase going beyond that in the number of man-hours worked, and, therefore, in wages paid out.

In both Belgium and France, there is considerable concealed unemployment or underemployment. People are going to be working longer hours. People are going to be drawn from agriculture into industry. Very probably agricultural income in those countries will be higher. Therefore, given limitations which exist, I submit, gentlemen, in any democratic country, to the extent to which taxes can be used to hold down the increase in consumers' income, and taking into account, especially in these countries that I have mentioned, of increases in consumers' incomes that will come about even if there are very small wage increases, we believe that heavy inflationary pressure is going to be generated.

It is basically for that reason in two of the countries, Germany and Italy, that we believe we cannot get a large expansion in employment, and a large expansion in production that we project, an increase in

total production of 10 percent in the case of Germany, and 5 percent in the case of Italy, that we cannot get those increases without a sizable increase in consumer income and a significant increase in per capita consumer income.

Broadly speaking, the result that we hope will be accomplished in especially those countries is that the standard of living of the people now employed will be held just about level, and that the increase which appears statistically as an across-the-board increase in those countries in their standard of living will reflect merely the effect of compensation for longer hours, and mainly of the reemployment of labor that is now unemployed.

Briefly, then, the first point is that if the countries achieve the results that are embodied and described in these illustrative figures they will have gone to approximately the limit of their ability to refinance rearmament without disastrous inflation.

What inflation has done in Europe since the war, I think all of you know pretty well.

The judgment I wish to express is not what is in the interest of these countries, and not what is a matter of fairness and equity, but that it is not in our interest if we want them to rearm to try to drive them to financing a scale that will mean serious inflation internally.

The second point I want to make also has to do with the standard of living. It is that even if the standard of living could be further cut, for instance, by raising more in taxes, or by the reimposition of rationing and other controls, it is our belief in general that the standard of living could not be reduced below the levels indicated in these figures without serious danger of internal aggression.

I think you have already had figures in previous testimony on per capita income in these countries as compared to the United States. I believe you have already had testimony to the effect that by and large their standard of living has been just about restored to the level of 1938.

You are, therefore, dealing with countries which for 14 years, by and large, have had a standard of living part of the time disastrously reduced, and all of the time below the level they reached in the late 1930's.

It is because of that low absolute level, and the long strain which has been aggravated in these past years by the distortions and the maldistribution that follows from inflation, that we believe that this also sets a sharp limit on what they can do.

The third reason why we believe the Europeans cannot do more out of their resources is, to my mind, perhaps the most important of the lot. I would like to put it this way: We are planning in this entire program for the long pull. In spite of the motives sometimes attributed to bureaucrats like myself, I think you will agree that we do not want, if Europe is rearmed 2 or 3 years from now, to have to have another Marshall plan and have economic recovery all over again.

Moreover, we do not want to get through the military build-up that Mr. Ohly and General Olmsted described yesterday only to find that we then have to continue indefinitely supplying, for instance, ammunition and spare parts in order to keep the Europeans rearmed.

What we are obviously driving for is a state of affairs 2 or 3 years from now when the Europeans can sustain their own military estab-

ishments with rapidly shrinking military aid from us, and where they can do so without in the meanwhile having again wrecked their economy.

Those are fine generalizations. What do they mean specifically?

What they mean specifically is, first, we believe that the Europeans must not be encouraged to, and must not be compelled to allow their capital assets, I mean their physical assets, their agricultural plant, their industrial plant, to be used up and go to pieces under the strain of rearmament the way it did, and quite properly, during the strain of wartime.

During the war in Europe, in the European countries, notably, of course, in England, and here, we used up our capital assets. We could not afford the resources to make good obsolescence and depreciation.

Since the war one of the processes that has been going forward in Europe, as here, has been the rebuilding of those capital assets. It is most important that the Europeans should not again be under pressure to use up their capital; indeed, it is most important they should continue to expand their economic base. By that, I mean specifically their industrial facilities and their agricultural facilities.

They have hardly made a dent in making up the need for housing that was not built during wartime. We do believe during these years immediately ahead the Europeans should set a very, very sharp limit on the resources they put into rebuilding their housing, as one example. We do not think they can halt that entirely.

Broadly, we believe in Europe, as here, it is essential, if this is a plan for the long pull, if we are not going to be coming back to you gentlemen for the indefinite future with this kind of a plea, that the Europeans not only expand their production for the next 3 years, but that they keep on expanding their production for the indefinite future.

I believe it is fair to say the general expectation that has been given to the American citizen is that if we do not get into world war III, we are going to have to have some privations for a period of 2 or 3 years while we are building up our Military Establishment. But at the end of that time we will have so expanded our total productive base that we can maintain the necessary military strength in being, and again enjoy a steadily rising standard of living.

I believe the Europeans have to have that same hope held out to them; that if they do not, the danger that we are courting is—I will not call it by the overdramatic term "internal aggression"—a state of morale in Europe so low that their real value to us as allies is largely lost.

It is for that reason that we feel that the process of building up of Europe's physical assets that that must not be too sharply interrupted.

What, in fact, we have provided for is a continuation, at approximately the rate of the past year, of investment in Europe. Within this level of investment Europe must begin to provide facilities to produce spare parts, to produce ammunition, and to gradually begin to expand its production of heavy military equipment.

All of that military investment we believe should be met by cut-backs in nonmilitary investment. But, broadly speaking, we think that that is as far as the Europeans can safely be pressed, not in their interest, but in our own interest.

I am sure the bearing of these points on the need for aid is obvious to you. But let me sum it up this way: In our own strong interest the Europeans should expand production, which means more imports of fuel, raw materials, at least the same imports of foodstuffs.

It is clearly not desirable that they should be compelled to save on imports in the ways that they could, by cutting their diet, by cutting imports of feed, which would cut agricultural production, or by the very drastic cuts in the standard of living which would be necessary if they were going to save on imports of raw materials in that way.

It is clearly undesirable that they should be under pressure to expand exports at the expense of a drastic cut in their capital investment, which is what I have just been talking about.

Therefore, to phrase what I have stated here, the purpose of our economic aid is to enable the Europeans to import on the scale and to export on the scale that will allow them to rearm, and at the same time maintain their diets, maintain a minimum standard of living, and continue the expansion in their production.

I would like to end this, sir, by saying I think there is a slightly negative sound when you are talking about where can the Europeans cut back, why can they not cut back more; why is it we have to step in and maintain their ability to import; why cannot they earn more for themselves?

I want, therefore, just to mention two or three things which I would call the affirmative expectations that we have of the Europeans, if you like in another sense, affirmative purposes of this program.

Broadly we think that in our negotiations with the Europeans concerning the provision of economic aid, and I would suggest even of military aid, we must assure ourselves that they will take approximately, roughly, the following steps to minimize the burden on us and to maximize their own contribution:

We believe they should limit any increase in the standard of living effectively to that required by reemployment, or the fuller employment of their working force.

We believe that given an effort of the magnitude we have here outlined, they have to tax, to restrict credit, to impose controls, if they need to, to whatever extent necessary to control inflation.

We believe they must agree to limit the uses of scarce materials and and scarce items like machine tools just as severely as we do in the United States. Also, they must act as decisively as we do to channel scarce materials and essential items like machine tools into essential purposes.

Mr. GORDON (presiding). Will you pardon me just a minute, Mr. Bissell? Mrs. Bolton, maybe you will want to wait until we have to go to the well. We have someone watching and you will be notified at the proper time.

Mr. BISSELL. I am just about through with this. We believe the Europeans must limit the increase in their imports to an increase substantially less, as the figures I quoted earlier suggested, than that which one would normally expect from the increase in production in Europe that we hope for.

In spite of the pressures of rearmament orders on their engineering industries, and in spite of raw material shortages, the Europeans should substantially maintain their total exports to the rest of the

world, and their export earnings which, of course, is the complete opposite of what they would do under the pressure of wartime.

This, concretely, is the kind of management by the Europeans of their total resources that, generally speaking, should be the condition of their receiving substantial aid from us.

If they are successful in managing their resources in this fashion it is our view that the results will be—the results in terms of production and in terms of their trade and in terms of their military expenditures and buildup will be of the sort that we have discussed and outlined today.

Well, Mr. Chairman, that is a good breaking point for me. Whenever the committee wishes, I think I should touch on the point, if you like, of unfinished recovery business, which I had just mentioned yesterday. I will glad to mention figures on that but it may be better to postpone that until we are in the course of questioning.

Mr. GORDON (presiding). I believe we will have to adjourn right now to answer our roll call. As I understand it we will continue when we get through answering the call, and will meet again here.

Mr. JAVITS. I think there is a resolution on the floor which we should be present for.

Mr. GORDON (presiding). That is right. We will have to adjourn then until about 2:30.

Mr. HERTER. I wonder if we could meet at 2 o'clock.

Mr. GORDON (presiding). Will you be back here at 2 o'clock?

Mr. BISSELL. Yes, sir.

Mr. GORDON (presiding). That will be fine. Then we will recess until 2 o'clock.

(Whereupon, at 11:25 a. m., the committee adjourned until 2 p. m. the same day.)

AFTERNOON SESSION

The committee reconvened at 2 p. m., Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

I will call the attention of the committee to the fact that these aid estimates have been numbered. I think we will be able to find our place a little better now. The staff has attended to that.

Mr. Bissell, will you continue your testimony? I am sorry I did not hear all of your testimony this morning.

Mr. BISSELL. Mr. Chairman, may I say I just spoke to our general counsel, who, with some of our staff, was numbering these, and what he said to me about the state of disorder of these papers was worse than anything the committee could have said.

I would like to apologize on the record for putting what was really a batch of working papers before you. I hope from now on, or on other occasions, this will not happen.

Mr. FULTON. I move those remarks be stricken from the record.

Chairman RICHARDS. I move that the remarks be taken down.

Mr. BISSELL. I will speak to only one other point, Mr. Chairman, which is on the question of how much of the economic aid proposed for next year can properly be said to be a continuation of the Marshall plan and recovery, and how much of it is in support of rearmament.

Chairman RICHARDS. Now you are getting down to what I want to know.

Mr. CHIPERFIELD. During the recess I discussed a point with Mr. Bissell, whether we could use counterpart funds to pay for some of the military items.

You remember a witness the other night suggested that. He said that he would comment on that situation.

Chairman RICHARDS. Maybe you would like him to comment before he goes on to the other.

Mr. CHIPERFIELD. It is along the same lines.

Chairman RICHARDS. It is along the same line? Maybe you had better answer that first, Mr. Bissell.

Mr. BISSELL. Mr. Chairman, I discussed this a little with Mr. Chiperfield. I think his question goes to the heart of the whole problem of bringing about and securing a full use of European productive facilities to lessen the burden on our own.

I hesitate to recall to the members of the committee some of your questions on minesweepers, and whether we could not make fuller use of European shipbuilding.

The answer is, of course, we could do that. I mean, there is unutilized shipbuilding capacity. Mr. Chiperfield's question went to other items in other countries, but I think it goes to the same principle.

I feel there are several moves but two in particular we should make, beginning immediately, to try to secure a full use of this capacity.

By the way, I would like to say to you, sir—this is my own view; Mr. Ohly may have another view to express—we should plan, beginning very promptly in the year, to use some of the funds that are appropriated to provide end-item aid to Europe for the purpose of making purchases of military end items in European countries.

There are two items that General Olmstead mentioned yesterday, ammunition and spare parts, to which I think that is peculiarly applicable.

I think all of us believe that the European countries could produce more of those items physically. That does not mean the limitations I outlined this morning do not apply to their ability to finance them, the extent to which we could expect them to carry this out of their own resources with the drain on their resources, but physically there is no doubt they could produce more.

I for one would like to see us begin immediately, or as soon as we can, to use some of our end-item funds to procure such items as a part of our military end-item aid in European countries that have excess capacity.

I would like to point out to you by so doing I believe we could make some net saving in our aid to these countries.

If, for instance, we go to Belgium and place a contract for \$20 million worth of some military end items, the Belgians are going to have to use a portion of that money, and it is very difficult to guess in advance how much of it they will need, to import the raw materials they need for their production, perhaps to buy some machinery over here that they need for it, or possibly just to import more general commodities to offset the increase in incomes that are paid out in the process.

But there is very little doubt in my mind that the Belgians would not need to use by any means the full \$20 million in my illustration for that purpose.

If we place a contract for, say, \$20 million, that involves them in additional foreign exchange costs of, let us say, \$10 million, and then the other \$10 million can be a net saving, because the Belgians would require that much less economic aid as a result of this transaction. In other words, they would be selling \$20 million worth of goods for dollars, and half of that could result in a net saving of economic assistance.

We, of course, would take that into account, and should, in economic aid going to Belgium. That is one thing we ought to do.

That is not directly responsive to your question. I think there is another thing we ought to do. As a matter of fact, we propose to start this immediately, even if we have another continuing resolution for the month of August.

I believe in quite a number of these countries, not all of them, for reasons I will mention, we should make it a condition of granting allotments of economic aid, that the counterpart funds be earmarked, I would say, preferably for use by the North Atlantic Treaty Organization itself for the procurement of certain military end items.

Chairman RICHARDS. That is not in the proposal we have before us now, is it?

Mr. BISSELL. I am not sure that that would not be permitted by the proposal you do have.

Chairman RICHARDS. That is what I wanted to know.

Mr. BISSELL. I believe it would be permitted. I believe one additional amendment would be required.

Chairman RICHARDS. It is permitted, but it does not earmark, say, the counterpart funds for a percentage amount?

Mr. BISSELL. No. What I am proposing is that we should begin to do this under that permissive authority in our negotiations with the countries.

Chairman RICHARDS. Under this permissive authority?

Mr. BISSELL. Yes. Perhaps something further would be necessary.

Chairman RICHARDS. You do not want to make it mandatory?

Mr. BISSELL. I will come back to that in a moment. At least, this is what I think could be done and should be done.

I would like to see us insist—the United States Government as a whole—that at least some part of the counterpart of our economic aid should be deposited by these countries in a central fund that would then be used to expedite military procurement in Europe for certain specified end-item programs.

Again, my proposal would be that—I think this is General Olmsted's business rather than mine—we concentrate on these programs of ammunition and spare parts in Europe, using both dollar funds and counterpart funds.

My hope is that if we combine these two actions we could secure a very much fuller use of European productive capacity. If we did it carefully, we could accomplish that result without unduly increasing the burden on our allies.

I might point out even in this use of counterpart there is a real possibility of some net saving in our bill, for in this way we can induce the countries to pay for more military production out of their own resources than is presumed in these figures. Then, again, there could be some saving in the end items that we supply them.

I would like to give this warning: Rightly or wrongly, and I assure you without any authority or encouragement from us, most of these European countries are counting on using a good deal of the counterpart they hope to get next year to ease their budgetary problem.

If, let us say, the French Finance Minister has counted on getting \$200, or \$300, or \$400 million from us in dollar aid, and in getting the counterpart to count against his budget, and if we now go and tell him that he cannot use it for anything in his budget but that he will have to use it for additional expenses, that will in fact be an added burden on that country, and he will so regard it.

If you say, "Should we do it anyway?" my answer is a very simple one. In some countries where I think the load is less than they could afford to take, we should insist on it.

When we run into a situation in one of these countries for the reasons I discussed this morning, we dare not in our interest try to put a heavier load on them, then I think obviously we should not try to do it in this way.

(Discussion off the record.)

Mr. BISSELL. So that would be my present very rough guess, there are countries where we ought to try to insist they use counterpart for this purpose, in addition to what they are now doing in their budgets, as distinguished from the countries where that would be somewhat dangerous.

I repeat, to sum up, I think these two devices together, placing some counterpart in a central fund for procurement in Europe for military items, coupled with some use of our dollars that are earmarked for end-item procurement, to procure in Europe, I think they would both get a better use of European facilities and promise some net saving to us.

Mr. Chairman, if I may, I will finish up with this point, on what is unfinished Marshall-plan business, and what is support of rearmament.

I think I can cover this very quickly, and put some figures in the record for you.

Chairman RICHARDS. Let me ask this, because that is so important, and we have been trying to get at it for a long time, could you segregate the amount of economic aid, as such, the amount to be used for military production and the amount of your estimate—there is some in the middle there that I do not see how you could designate, it is a kind of floating thing that you might use for either. If you could just tell us about those things, I would appreciate it.

Mr. BISSELL. I would be glad to give you some figures. May I explain them this way? I know that other witnesses have told the committee why this is a difficult division to make. It is a difficult one to make even in theory and concept. I will not enlarge on that.

The only way I know to answer this question is to give you my estimate of the amount of aid these countries would require, if they were not rearming on any larger scale this year than they were last year.

May I just warn you of this fact: The results of the Korean War have done two things to these countries.

They have imposed on them a rearmament burden, which I have been talking about and others have to you for days. But you must remember that has also enormously affected the problem of selling

exports. The reason that Europe is selling a lot of steel in the United States today, scrap, certain nonferrous metals, and the like, is because we have a boom here that is largely the result of our own rearmament and, therefore, the whole problem that we had before you 12 months ago of how do the Europeans expand their sales has been largely solved.

Chairman RICHARDS. I am sorry to interrupt you there. I want to say there is a vote on the rule for the tidelands bill.

Mr. BISSELL. The figures that I am going to give you, sir, are these: The aid that these countries would require if the boom we were having in this country last summer had continued—in other words, if they had a good strong market in the world as a whole outside of Europe in which to sell their exports.

Chairman RICHARDS. I will tell you what they will want on the floor. They will want an estimate or how much would be in each category of this bill, of the figure we have here.

Mr. BISSELL. Let me give you these figures, if I may, and then try to explain them.

As I say, this is my estimate of what these countries would require if they were not rearming any more than last year. The total we would estimate is \$672 million.

I will read off, if I may, the figures. I will compare them by countries.

Chairman RICHARDS. The \$672 million, is that economic aid?

Mr. BISSELL. Yes.

Chairman RICHARDS. For military production?

Mr. BISSELL. No.

Chairman RICHARDS. All over?

Mr. BISSELL. That is the total Marshall plan kind of aid. If we were having the fourth year of the Marshall plan, with favorable market conditions in the rest of the world, I think we would be asking you for \$672 million.

I would like to give it to you by countries.

It is \$145 million for Austria. That is exactly the same thing as is before you. If you want, you can interpret that as saying for all practical purposes all the aid to Austria is unfinished Marshall plan business; \$80 million for Denmark. Nothing, by the way, for Belgium, as against \$50 million in the bill before you.

I might say, I do not want to take the committee's time for an extended comment, but Denmark has one of the highest standards of living in Europe, and is therefore suffering to a very small degree from certain kinds of strains. They have run into serious difficulty in marketing their exports, and that is why we believe they need more than half the aid we are proposing.

The next figure, \$50 million for France, as against \$200 million.

By the way, in the case of both Denmark and France, it is our view that after this current fiscal year, 1952, they would not, in the absence of rearmament, need any further aid.

Germany, \$100 million, as compared with \$175 million in the proposal before you. The reason that Germany would need that much is that if there was no rearmament Germany could build up her exports and dollar earnings quite a lot more than is shown in these figures.

You must offset against that the fact that we would have very much

smaller United States military dollar disbursements and expenditures in Germany than are allowed for in the figures that are before you.

In the case of Germany, they would have earned more by selling goods outside their borders, but they would have earned quite a lot less by acting as host to the United States military forces.

The next is Greece, \$175 million, as compared with \$250 million in the proposal before you. In the case of Greece, I think the whole committee is familiar with the reasons why that is one of the most acute economic problems and I will not enlarge on it.

The fact that Greece has to maintain as large a military establishment as she does at present, and has to give up or halt the demobilization of her armed forces, is basically what accounts for the difference in the 250 which is before you and 175 figure I have just quoted.

For Iceland, \$8 million, which is the same as the figure before you. There, again, I would say the problems are really little affected by rearmament.

For The Netherlands, \$60 million, as compared with \$155 million in the present proposal. There, again, the point that I think should be mentioned is that The Netherlands had a big population increase. They have lost a very rich dollar-earning possession since the war, and we believe that is one of the most intractable peacetime trade problems we face.

Nothing for Norway. For Trieste, \$4 million, the same as in the bill before you.

Turkey, \$25 million, as against \$70 million.

In the case of the \$75 million for Italy, and \$25 million for Turkey, I would say that those two figures have this in common: They would be needed in the absence of a major military effort in those countries, not so much for an acute foreign exchange problem as to permit a continuation, at least through the current year, of some capital development, agricultural development projects in southern Italy, and in Turkey as well.

Chairman RICHARDS. Will you compare those funds last year and this year?

Mr. BISSELL. Italy was 275 in the figure which is before you, and 75 if there was no rearmament.

The total is \$672 million, unless my addition is bad.

Mr. Chairman, I would like to add one more word on this. I would guess that some of the committee members may have this question in mind. Suppose we could have gone through the fourth year of a peacetime Marshall plan with this sum of money—where would we stand at the end of this new fiscal year, the terminal date of the Marshall plan?

I will answer this by saying, in our view we would still, beyond the scheduled end of the Marshall plan, need to provide some aid to Austria, Greece, Iceland, and Trieste, unless it were completely incorporated in Italy—

Mr. CHIPERFIELD. Will you comment on Iceland? Where is there a need in Iceland for \$8 million?

Mr. BISSELL. I think, Mr. Chiperfield, the problem in Iceland is almost wholly what I would call a peacetime nonrearmament problem.

Briefly, I would say two things have happened to Iceland. As a result of our wartime expenditures there, their standard of living was

raised rather sharply to a level which I do not think they can sustain in the long run out of their own resources. And other dislocations were introduced that they have never coped with.

Another thing, it is a country that has lived entirely on fishing, and since the war they have had only one good herring catch. They have had more competition in that industry. The industry is a one-crop industry for the country.

Mr. CHIPERFIELD. If those crops continue bad, are we going to continue Marshall plan aid every time they have a bad fish crop?

Mr. BISSELL. What we are doing is pretty nearly that. My answer to you would be that I profoundly hope if we had our Marshall plan and no rearmament we would not go on into the indefinite future with that country.

There are certain specific projects on foot that we hope over a period of years would enable them to pay their own way. I also have to say to you that I think this is a very, very difficult political problem—put it this way—an economic problem that gives rise to a political problem with overtones of a strategic problem.

There is an element of continuing relief which, in the absence of rearmament, would have to go on for some years in that country until we could build up wholly new methods of producing wealth or until they could gradually shake down their standard of living.

It may be that our policy as a Government should be to discontinue that sharply and force an economic readjustment. I do not particularly want to express an opinion. I am sure you can imagine as well as I can the kinds of issues that that choice would raise.

Mr. FULTON. Is it not a fact that we vitally need those bases in Iceland, so we look at that first and then we must do the things that will keep Iceland going, regardless?

Mr. BISSELL. I think, Mr. Fulton, that is exactly what the situation is. But I do not want to try to pretend to this committee that if it were not for that issue, if we did not have the situation in the world as we do politically and militarily, that it would be justified in our self-interest. It might be as charity.

(Discussion off the record.)

Mr. BISSELL. I started to say, Mr. Chairman, that for the year after this current fiscal year, after the scheduled end of the Marshall plan, it is our feeling that aid would be required for Austria and Greece on a considerable scale, and on a modest scale for Iceland, Trieste, and possibly some for Germany and Italy.

I will go into the figures if you want to, but the major part of this is as follows: The rough figures we have put down are \$100 million for Austria, \$100 million for Greece, probably \$25 million to \$50 million for Italy, \$5 million for Iceland, \$3 million for Trieste. It is very hard to say what the German position would be.

I think the members of this committee may remember that in almost all testimony for the past 2 years we have emphasized our fear that at the end of the Marshall plan, even if it were by our standards pretty successful, there would be one, or two, or three very weak economies in Europe that would require continued support beyond the end of the Marshall plan, even if we did not have the rearmament problem.

I think this is a somewhat academic discussion because we are facing a different situation. I want to say to the committee that the original enterprise could have been tapered off.

You understand I am not suggesting this would have been the basis for continuing a European recovery program as such.

As I think Mr. Hoffman and others have testified in previous years, my feeling is if we had an Austrian problem, a Greek problem, possibly an Italian problem, that matter would have been handled as separate issues on a continuing decline scale, if the Congress had decided to go ahead with that at all after the Marshall plan.

Can I come back to your question? You said that what you really want to be able to state is, How much of the funds we are proposing can properly be said to be for recovery purposes.

I have to say, sir, that I cannot give any better answer or any different answer in figures than I have already given.

In Austria it is happily simple and clear; in Iceland the same. I am saying virtually the whole amount of money we are proposing is for recovery purposes.

Chairman RICHARDS. All right. If I were against this proposal and just out of the fifth grade, instead of the eighth grade that I did get out of, and I were down there on the floor, the first thing I would be asked, when I said, "Yes, we are winding up Marshall plan aid; most of this stuff is economic production for military purposes," would be, "How do you figure that? What do we do? This is neither fish nor fowl."

You have that no-man's land in there. Somebody has to give us an estimate of what this stuff is, whether it is to support the military program or whether it is bona fide economic aid unrelated to the military program. If we do not, we are going to be in the hole.

Mr. BISSELL. May I take a specific case, Italy, for an illustration, Mr. Chairman, and give you as straight an answer as I can.

I have given you now two figures. We are requesting \$275 million for Italy in the proposal before you, and I said a few moments ago that we thought that \$75 million would be needed if there were no rearmament going on in Italy.

May I take this as an example, and explain the meaning of those two figures? The figure I think you ought to use is the \$75 million. What I am saying is if Italy did not have to increase its military budget, if it did not have to devote metal to its fabricating plants, some of the output of its steel mills to producing ordnance items, trucks, vehicles, and the like, if it did not have to expand its budget and its budget deficit, and therefore develop inflationary pressure inside Italy, if it did not have to shift quite a lot of manpower into the army, and in Italy as in the United States I am sure they eat more in the army than out of it, if Italy did not have to do these things, they could get by with a smaller amount of imports, and certainly with a good world market could expand their exports over the figures we have shown.

What I am saying to you is that between the savings on imports and the larger earnings through exports they would be \$200 million better off if they did not have to do the things that you mean by rearmament.

Therefore, I think the most honest answer that I could give to that question about Italy is that the Italians would need \$75 million purely for economic purposes not connected with rearmament.

When your load on top of that, taking account of all the cut-backs—

Chairman RICHARDS. Could you not do the same thing for every country?

Mr. BISSELL. Then you can use the figures I have given you. I think that is why these figures are as good as any that I could give you.

I simply say this: suppose we just take one factor in the Italian situation. Suppose an Italian soldier eats more bread, as I am sure he does, than the Italian civilian on the statistical average, you can say that some of the increase in imports is attributable to the increase in the size of the Italian Army.

Chairman RICHARDS. Mr. Battle, will you take the chair?

Mr. BISSELL. I think the fairest way to answer the question that the chairman posed is to say for just that reason. And if you pick out that one commodity as an example, X million bushels at X dollars and that is what you contribute, it is the increase that can be charged against rearmament.

When I say that \$200—

Mr. HERTER. Will you yield at that point? Would it not be possible for us to get a table with three sets of figures on it? One would be the total amounts that you propose for that country; second, what you would call straight economic aid; third, the balance for military aid; and finally, another column showing that country's total military contribution.

It seems to me that would be a good comparison.

Mr. BISSELL. We can easily do that.

Mr. HERTER. It would very easily be understood, I think.

Mr. BISSELL. I probably seem to be trying to complicate this point. I think I have to explain the difficulties that I face. And if you have to deal with this on the floor, all of you will have to see the clear and honest intellectual basis of this.

It is very hard to slice it and say that so much of the wheat is going to Italy for the army. You could find that figure out and measure it. That would not be a fair and honest figure. The best I can give you in terms of total aid, and this would be true in terms of commodities, on both the import and export side, if we could carry the thing that far, is to say this is the extra part which results from the acceleration of the rearmament effort in this country.

Mr. OHLY. I would like to have Mr. Bissell bring out a point that may not be clear from what he has already said—the fact that while you may say that \$76 million is what Italy would require for economic purposes if there were no rearmament effort, without the entire \$276 million Italy would not be able to reach the level of rearmament effort which has been set as a target.

Mr. HERTER. I would say put in the fourth column the rearmament effort that is expected as a result of putting this money in the pot.

Mr. BISSELL. May I put it in these words: Are we asking for a sum of money and proposing a set of actions next year that represents full recovery, that is, all the things that would have been done in the fourth year of the Marshall plan with rearmament piled on top of that?

If that was what we were proposing, I think it would be fair to say for Europe, as we have had to say for this country, "When we are piling rearmament on top, a good deal of the recovery stuff had better give way."

We are not proposing that. The whole program that is before you represents what is the result of those cuts in what you could properly call recovery activities, the maximum feasible cuts, and then rearmament put on top of what is left.

Let me make that very concrete with a couple of examples of what I mean.

If we had a fourth year of the Marshall plan, I for one would have hoped that in that fourth year the standard of living would have risen by perhaps a couple of percent more all the way across Europe than is in these figures.

A couple of percent on the standard of living would have meant a couple of billion dollars' worth of goods and services pouring out of European factories, mines, and farms for the consumer.

If we had a fourth year of the Marshall plan, we would have been able to put the entire amount of money, or the Europeans would have been able to put the entire amount of money shown in these tables for capital investment into purely peacetime investment, a lot more into housing.

As I said this morning, what we are in fact proposing is that the whole of their military investment has to come out of cuts in their economy.

I think it is most important to emphasize to you that we are not proposing recovery, plus a little arithmetic addition of something else that you could call rearmament. What we believe is that the Europeans have to cut back in the improvement of their standard of living, and in some countries cut it back absolutely. They have to cut down their peacetime investment; they have to save on nonessential imports; they have to live with some domestic inflationary pressure; they have to put controls on the use of scarce materials.

After they have done these things and put on top of what is left rearmament, that is the picture we have tried to present to you.

Mr. HERTER. From a purely economic point of view let us take the case of Italy again. You say \$200 million in economic aid is made essential because of the armament effort.

You are asking that the \$200 million be spent by the ECA for that purpose, or its successor organization. Let us assume that from purely military funds or offshore procurement of military end items or spare parts, or something which would ordinarily have been in the Italian budget to have been done by the Italians, we should pay dollars.

Would not the economic effect be the same, say \$100 million, as if you put \$1 million in except with the loss of the counterpart which would be reflected in the budgetary requirement of the Italian Government?

Mr. BISSELL. I think the answer is substantially "Yes; it would"; emphasizing your proviso that we spend \$200 million for items that would otherwise have been in the Italian budget.

May I try to describe the difference in the two processes this way: If the general went with \$200 in his pocket to spend in Italy, what in fact he would do would be to go to the bank of Italy and buy lira, and he would then go around with the lira and place his contracts.

That is the normal process of international trade. It has seemed to us that with respect to the question you pose, the choice is between buying lira with free dollars and then spending the lira or providing

the dollars under the procedures that we have developed in this Government whereby we have some control over the way the dollars are used, and then as a successive operation having some control over the way the counterpart is used; that is, the lira.

My own feeling is that the latter of the two processes gives us more effective leverage to accomplish what we want to accomplish in the country than the other.

I would like to suggest to you, if I may, that there are still other variants. For instance, if the Pentagon were spending this money we could make certain conditions about the way those dollars were to be used by the Italians.

On top of that we would have the counterpart, lira, to spend in Italy. Still a third way would be a variant of what we are doing now. We could say we are going to spend \$200 million in aid to Italy, that the counterpart instead of being 5 percent deposited to United States account is going to be 95 percent to United States account, or some larger percentage, so we could have a more direct control over the counterpart. I am sure you will recognize those are all variations.

I believe that the economic effect in the broad sense of the term would be exactly the same. I think the real question which I would like to suggest that the committee consider is what technique among these several possible ones gives us the greatest leverage in securing the result we want; that is, in getting this whole problem worked out.

Mr. HERTER. I fully understand your point in wanting to control greater segments of the economy by doing it this way.

As you know, and I think all of us realize it, the actual letting of contracts for military goods has been going very slowly. The armament industry of Europe is building up very slowly.

Might it not be a spur, considering this is a security effort, to get some contracts let pretty quickly and the payment made in dollars in order to get the machinery and production in the armament industry under way faster than it is going at the present time.

Mr. BISSELL. I think that may be a spur, sir. I think my own opinion is that that can be accomplished in other ways.

A few moments ago I outlined some special measures we are considering at this point, which involved in part spending dollars in exactly the way you have suggested, and in part requiring the countries to mark counterpart for certain agreed expenditures.

Mr. HERTER. My feeling is that the machinery as it is set up in Europe is so cumbersome that there will be tremendous delays before agreement is reached between the various components unless responsibility is centered somewhere.

General OLSEN. We are doing exactly what you suggest, just getting it under way. Initially it had been done almost solely for the United States forces' requirements there. Now also the procurement of end-item programs with dollar contracts will be.

Mr. HERTER. I had heard you were doing that.

Mr. BISSELL. You conditioned your question to me on the assumption that we, the United States Government, go in and spend money for things that otherwise would be in the country's own budget.

As I am sure you are aware, if you go beyond that, if you begin to try to buy goods there additional to what would have been in their budget, then a part of the dollars that we spend for those items will

be needed to pay for the raw materials, components, and the like that they have to import to manufacture those goods.

So long as we are within the proviso you stated in your question, sir, the answer I think is that a dollar spent in Italy has the same broad economic effect as a dollar of aid given to Italy, subject to this reservation.

(Discussion off the record.)

Mr. RUNCORE. Do I understand Mr. Herter is advocating in order to get these nations to produce arms for their own troops that we give them an additional incentive by giving the French and Italian manufacturer dollars for it instead of francs and lire?

Mr. HERTER. Yes.

Mr. RUNCORE. That is going to be a very, very tough proposition to jam down people's throats if they reach a stage where they will only do this for themselves if they get dollars from us from the ECA.

Mr. HERTER. I am merely inquiring if that process is not taking place with all our troops abroad in Europe. There is a lot of procurement in Europe itself. I was asking about the effect on the country's economy itself, and which method of procedure was likely to get the army moving the faster from the point of view of the end results. I understand we are all driving at getting Europe to take care of herself in time through the building up of its own industry. The question is whether dollars spent today to get moving and moving fast might not be better than giving it in an indirect way and providing raw materials and providing dollars for component parts, and things of that kind, for the segments of the economy. I was wondering if it might not be better going directly to the heart of the thing.

Mr. RUNCORE. In other words, if country X were proposing a \$275,000,000 outlay and we were going to do this with \$175,000,000, will we cut their ECA down to \$100,000,000, or give them \$275,000,000 anyway, plus the additional sum you are going to spend in dollars?

Mr. HERTER. I am conditioning the amount on the amount that is being spent in dollar needs by the military for military procurement, because that is useful to the over-all economy of the country itself.

Mr. BISSELL. May I make one point, Mr. Herter?

Mr. HERTER. Yes.

Mr. BISSELL. I took it for granted what you had in mind in your question to me was the procedure whereby the United States Government would, as in a normal foreign trade transaction, go to the central bank of the country and buy its currency, and never pay dollars to a manufacturer directly. I am sure you are aware that especially in quite a number of the European countries there would be the greatest danger in actually paying the dollars to the producer.

Mr. HERTER. I did not have that in mind, but I assume that is the way the military are operating today in paying in the local currency.

Mr. BISSELL. I am sure it is. Could I make two other comments, since you raised this general and exceedingly important point?

I am sure you realize one of the major complications with it. As I already testified, I think this ought to be done: That is, we hold out some of the dollars that are proposed in this whole bill for purchases of end items in Europe for the European countries, and that to the extent of at least a part of the funds so utilized there will be a net saving in the total required. I have already testified to that.

Having said that, I think the committee should be aware that we certainly do not want to release in any one of these countries a kind of competitive process whereby a United States procurement service operating right down to the individual company level—the individual supplier level—is competing with the local European procurement service.

I do not pretend to know anything about procurement techniques. That is not the point to which I am speaking. My point is, if we are trying with one hand to push the Italians to spend a lot of money themselves in Italy, much more than \$200,000,000, and if in the meanwhile we are coming in to spend \$200,000,000, that obviously creates problems in coordinating the two procurement programs in Italy.

Mr. HERTER. You have that problem at this moment—if you do not mind my interrupting—in the procurement offices over there now. You have the military procurement offices in Europe now. Those offices presumably are dovetailing their operation in conjunction with the local military missions, the country teams, the ECA, and the Ambassador. I presume those are all being coordinated on the spot.

Mr. BISSELL. I did not mean to suggest this was a fatal objection. That is why I said I had already expressed my own personal belief it should be done. Frankly, I think the point I just made is the reason why this ought to be done within certain rather limited programs. The proposal that is currently being considered is to do this on a sizable scale for ammunition and spare parts. There are good reasons why those should have a first priority.

What is being done is not limited strictly to those fields, but I think the coordination problem will be made easier in that way.

The other point I am sure you also have in mind is that you do not want to create a state of mind in government in Europe that if they hang back and wait that we will come in and do their procurement for them.

Again, a reason why the United States procurement program in Europe needs to be pretty sharply defined at an early date and then adhered to is so that we will not encourage the Europeans to sit back and wait for us to do even that part of it we are still relying on them to do themselves. That danger is a real one.

Mr. HERTER. That is known as disincentive.

Mr. BISSELL. That is correct. I tried to avoid the ugly word.

STATEMENT OF JOHN H. OHLY, ACTING ASSISTANT DIRECTOR, OFFICE OF INTERNATIONAL SECURITY AFFAIRS

Mr. OHLY. That goes back to a premise you put in your question, Mr. Herter, that this procurement would be in lieu of things which they would otherwise include in their own budgets.

Mr. HERTER. It would be dollar procurement.

Mr. OHLY. Dollar procurement for things which they would otherwise cover in their own budgets.

Mr. HERTER. That is right.

Mr. OHLY. When you get to that point, unless we have a desire to guide production into particular lines and carry certain particular types of production, you run the real danger that there will be a disincentive to including all of the moneys in their local budget that they should for the various purposes that they should.

Mr. VOYTS. Will the gentleman yield?

Mr. HENTER. Yes. I think I was questioning out of turn.

Chairman RICHARDS. Mr. Vorys, go ahead.

Mr. VORYS. These figures have been presented to us on the basis that Europe has to have this if they are going to rearm in order to live somewhat in the style that we have accustomed them to live. It seems that if we simply sent a check over there to OEEC and said, "Now, here is enough to balance everything up, and you fellows divide it up," or if we sent a check to each country, the result would be the same and we could save about \$53,000,000 in administration.

If it does not make any difference where it goes in and it has got to be poured in some place, I think that follows.

Chairman RICHARDS. You would have to create a bank to pay it out.

Mr. VORYS. No. You would not have to create a bank.

Chairman RICHARDS. You have to have somebody to do the counting of that.

General OLSTED. They might even be willing to come and get it.

Mr. VORYS. No. According to this theory, as long as it is poured in, it does not make any difference which end it is poured in.

Mr. VORYS. As we all know, there are some thoughtful people who have suggested that we do substantially that. If we are going to give them money to balance up their budgets, and so forth, we could just hand it over to them and save on administration costs.

Mr. REECE. Would you permit an interruption?

Mr. VORYS. An interruption to my interruption?

Mr. REECE. In the third degree.

Mr. VORYS. Yes.

Mr. REECE. I was not able to be present yesterday morning, but I took time out at noon, at the risk of security, and took the hearings downstairs and read them. In reading that testimony of yesterday morning that was the very problem that presented itself to me. In reading it and summarizing more or less in your mind the testimony, it seemed all that they needed was dollars to balance things up.

That gets back around to the question I have raised a time or two at the risk of being monotonous, about what the money was finally being used for, and a breakdown as to its application.

Mr. BISSELL. May I comment on that?

Chairman RICHARDS. Yes. According to Mr. Reece's and Mr. Vorys' observation, maybe you do not want to see them with these dollars buy crackerjack and pop corn and fireworks, but we want to have some say-so about what they are going to do with this money, and see that it is interwoven in this plan with the Mutual Security Program.

Go ahead.

Mr. BISSELL. That is substantially the point. We were talking about Italy and I might just pick that as an example. Next year it is our estimate that Italy will earn—talking about its foreign trade in gold and dollars only—it will earn some \$400,000,000. It will spend that together with the \$275,000,000 that we have proposed for aid.

I think the central point is that we care a great deal what those dollars are spent for. If the dollars are just dollars in the bank and not to be used there would be no use for them and no possible sense in providing them. But the central point is that I for one care what they do with the \$400,000,000 they spent out of their own current earn-

ings, just as I do with what they do with the \$275,000,000 that we are proposing the United States Government should furnish them.

I not only care about those \$675,000,000, roughly, that they will spend for those goods and services they will have to import and pay for in dollars—I care somewhat less, but a great deal about the other goods they import, and I also care what the Italians do with their manpower and their own steel production. They have some sulfur production, and I care what they do with that.

My concern, and I think probably the concern of the United States as an ally of Italy, must be with what they do with all of the goods that they import and all of the goods that they produce.

Now, I do not pretend for a moment that we should try to exercise or that as an ally of that country we could in fact exercise a tight control, because without taking over the Government of the country that, obviously, is impossible. I do say that there is nothing gained whatever in satisfying ourselves that the "X" dollars, whatever the sum is, which we give the Italians, go, let us say, for machine tools, copper, aluminum, petroleum, or steel, all of which can be traced through to military end items.

There is nothing accomplished by satisfying ourselves of that if the \$100,000,000 that the Italians have earned and are spending out of their current earnings are going for juke boxes, luxury items, high-priced automobiles produced in the United States, or any one of a number of other items of the same sort.

I say that because if that should be the situation then "X"—whatever number "X" is—obviously is too big. The only way we can be sure that we are not giving any more than is necessary to permit them to rearm is to be sure that they are making as tight a use of their own dollars and the rest of their foreign exchange—and, I repeat, their own productive capacity—that they are applying the same standards that we are applying to the goods that we finance for them.

There are many mechanical ways that could be done, but that seems to be the nub of this problem.

Could I just say this one more thing?

Chairman RICHARDS. All right.

Mr. BISSELL. I trust the members of this committee realize, of course, that we have made estimates of the total imports of each of these countries for this forthcoming year, as well as the figures for the year just ended, for comparison. In this formidable mass of tables before you there are estimates of imports in eight commodity categories, and by sources, for each country, that bear on what I have been talking about. That is the total imports of the country, and what they are doing with their total supply of foreign exchange.

We can, of course, give you a great deal more detail and testimony than the eight categories. Most of those we can break down a good deal further, if you wish us to go into that detail. We are able with regard to each of those and the subcategories to tell you why we think the figures should be the ones that are here before you.

I would be delighted to discuss that either in the aggregate for all of these countries, or country by country. That is a pretty detailed subject, but we are glad to do it to whatever extent the committee desires.

So I do not want you to think on the question of total flow of goods into these countries that all we have calculated is that they need so many dollars, and we do not care how they spend them.

Mr. JUDD. Am I at liberty to ask a question, Mr. Chairman?

Chairman RICHARDS. Yes, Dr. Judd.

Mr. JUDD. Mr. Bissell, do you find in actual practice that sometimes this kind of situation develops? The best elements in the countries we are helping prefer to have your agency there to insist that the money be spent in a certain way, because they are subject to political pressure the same as officials are in our country, and your presence there permits them to say to their own people, "Of course, now, we would like to spend it for some of the consumer items that you just mentioned, but, after all, this is American money and these ECA fellows are tough, so we have to keep on the beam and see that it goes either for economic recovery or else for military purposes, whichever the case may be."

Do you find that to be your experience?

Mr. BISSELL. Absolutely, sir. I think it is true in every single case.

Mr. JUDD. And the weaker the government is, the less secure it is, the more it needs such moral backing by the United States and its agencies?

Mr. BISSELL. Exactly that. Exactly that.

Mr. JUDD. That is in line with my experience.

Chairman RICHARDS. Are there any other questions?

Mr. VORYS. Going to Germany—that is page 62 the way it is now numbered—I found that you have estimated an increase of, as I figure it, \$103,000,000 in food and agricultural imports, and \$275,000,000 in industrial imports from the dollar area, or to be correct, \$265,000,000 in food and agriculture and \$275,000,000 in industrial imports, which is about a half-a-billion-dollar increase in imports into Germany.

Of course, nothing is on our chart for the military for Germany.

I wondered why that tremendous increase for Germany in this coming year?

Mr. BISSELL. Can I give part of the answer and then ask Dr. Fitzgerald, who is here, Mr. Vorys, to give the other part?

Mr. VORYS. Yes.

Mr. BISSELL. The figures, as you have them before you, the grand total for both food and agricultural and industrial imports comes to 3,215 and 3,755 for the two successive years. That is on pages 60 and 62. I am quite sure they are the same figures you have.

Mr. VORYS. That is right.

Mr. BISSELL. Of that amount approximately \$300,000,000 of the increase represents price increases. If you took the \$3,755,000,000 figure which is on page 62 and the grand total and expressed that in terms of the same prices we have used for 1950-51, we estimate it will be approximately \$3,414,000,000. In other words, just about a \$200,000,000 increase.

Now I would like to ask Dr. Fitzgerald if he would talk to the point of that specific increase in German imports.

Dr. FITZGERALD. Congressman Vorys, there are two reasons for the increase shown in the imports for the Federal Republic of Germany in 1951-52 as compared to 1950-51. One of the reasons is the general increase in the level of industrial activity in Germany which, as the committee will remember, lagged behind recovery in the other parts of Western Europe, and really only got under a full head of steam about the middle of the 1950-51 fiscal year.

The second thing is the impact that that increase in production and in productivity has upon the demand for consumer goods.

Mr. Bissell has mentioned that in the case of all the European countries we expect some increase in per capita consumption growing out of increased employment. In Germany we have had a large unemployment in the past, and we expect it to be substantially reduced in 1951-52. In addition, as you ladies and gentlemen all know, the continuing and very sharp increase in German population, both growing out of the birth rate in the country and because of the continued fleeing of people from the east to the west, will increase requirements.

In the case of agricultural commodities—

Mr. VORYS. Just a second. I would have thought that the increase in industrial activity, unless they were selling everything at a loss, would mean an increase in prosperity—I thought that in all cases the increase in industrial activity, and production, was a good thing. However, does that mean that it increases the drag on us for materials?

Dr. FITZGERALD. No, sir. Not at all. The increase in productivity and the increase in activity in Germany is reflected in these figures to which you had reference, sir. This is not a balance-of-payments table. These are just gross import figures. Mr. Bissell can give you the declining aid figures that come out of the improvement in the internal situation in Germany.

Mr. BISSELL. Can I just mention them, sir?

Mr. VORYS. Yes.

Mr. BISSELL. They are on page 59 of this group of tables. There you will notice that German exports in all currencies are expected to rise from \$2,710,000,000 to \$3,495,000,000, or about \$785,000,000, if I am not mistaken. That in absolute terms is considerably more than the increase in imports.

The increase in receipts and services is proportionally even greater, that is, from \$186,000,000 to \$247,000,000.

If you take the balance of trade and services with the world as a whole it improves from a deficit of \$673,000,000 to a deficit of \$506,000,000 for the reasons just indicated.

If you go to what is called in line 9 on page 59, which is the balance of payments, "The net balance of payments," taking into account also other factors, including the expenditures for the account of United States troops in Germany, you will see that the deficit for the year just ended is cut by a third as we go to the new year. Of course, the amount of aid proposed is cut more than in half.

So in the particular case of Germany there is a very marked improvement expected in spite of the factor that I have referred to several times.

We are pulling a lot of people back into employment in Germany, and that is one of the cases where I think inevitably more goods and services will have to be consumed. You cannot reemploy as many people as that—and, to be exact, our estimate is that the numbers of employed will increase by 1,200,000, which is over a base of 21,000,000 employed in the labor force the last year—you cannot get that sort of an increase in employment for reasons I have explained, without some increase in consumption.

However, in spite of that, we do expect this improvement in the foreign balance that I have just mentioned.

Mr. VORYS. But if there is an increase in employment and an increase in consumption in a country where there is at present no mili-

tary program, I cannot see why that would increase the cost or the economic deficit for Germany from 100,000,000 to 175,000,000. I thought with these vast increases in food and agriculture that maybe they were just going to live better. If they are not going to devote any of their economy to armament, well, I cannot figure it out then. (Discussion off the record.)

Mr. HERTER. Mr. Chairman, I would like to ask the general a question.

Chairman RICHARDS. Mr. Herter.

Mr. HERTER. Yesterday, when you were showing us the table of priorities which you had up on the mantelpiece you indicated there were three or four categories of priorities that came ahead of the MDAP program, as such. It does not make any difference how much money we put into this bill for end-items, to be supplied under the MDAP program, does it? That relationship of priorities will still remain?

**STATEMENT OF BRIG. GEN. GEORGE H. OLMSTED, DEPUTY
ASSISTANT CHIEF, G-4, DEPARTMENT OF THE ARMY**

General OLMSTED. Yes.

Mr. HERTER. The money has nothing to do with it?

General OLMSTED. That is right.

Mr. HERTER. In other words, somebody in the War Department or the Pentagon determines when tanks come off the production line, or when guns come off the production line, whether they should go to a training camp, or Korea, or to Indochina, or to a pool somewhere, or the MDAP program, the one we have in Europe. Now, who makes that determination in the Pentagon?

General OLMSTED. Well, now, the requirements of the United States forces are made up in the respective services by their supply people.

Mr. HERTER. Yes.

(Discussion off the record.)

General OLMSTED. That is medium tanks. If the amount of funds available to us does not permit us to buy that many tanks, then we do not produce them.

So the question of the priority of allocation is only one factor. You have to get the tanks in production. Otherwise they will not be there, irrespective of the priorities that might be established for them, unless you were to take them away from our own forces.

Mr. HERTER. But I am asking you who in the War Department makes the determination as to where these shall be sent?

General OLMSTED. As to where they shall be sent?

Mr. HERTER. Yes.

General OLMSTED. Pardon me. I did not understand.

Under the Joint Chiefs of Staff there is a Joint Munitions Allocating Committee, made up of the chief logisticians of the Army, Navy, and Air Forces. They have the final say, subject, of course, to the review of the Joint Chiefs of Staff.

Within the services, taking the Army for an illustration, there is an Army Allocations Committee that meets periodically and reviews the requirements, the resources, and makes the division in the light of the priorities as established by the Joint Chiefs of Staff.

Mr. HERTER. Then, when the allocation is made for MDAP, it becomes a bookkeeping operation and a particular tank is charged against that appropriation. Is that correct?

General OLMSTED. Substantially you are right. I think in detail it is handled a little bit differently. I think the procuring service is the Chief of Ordnance, who buys the tanks, makes the bookkeeping operation out when he places the order; but the actual delivery is then controlled at the controller's level as to how nearly your appropriation has been complied with, or fulfilled.

Mr. HERTER. Then at the time you place the order for the tanks you cannot tell what the final disposition of the tanks is going to be, because your order of priorities may change in the interim period?

General OLMSTED. That is right. Because of the method in which our funds come to us we have a sort of complexity of bookkeeping there—which may be the point you are thinking about—where we get some funds for tanks through a United States Department of Defense appropriation, and some funds for tanks through the MDAF appropriation.

Mr. HERTER. Can you explain this to me then? You see that chart or those two charts, I think, showing us how much of the 1950 billion dollars roughly had been spent, and how much of the 1951 had been spent. There were identical items, or almost identical items, on both of those charts.

General OLMSTED. That is right.

Mr. HERTER. On the 1950 chart nothing had come up to 100 percent. I think nothing had come up to 100 percent. However, on the 1951 a certain amount had been spent in the same categories.

Who determines from a bookkeeping point of view that they do not fill up to 100 percent on 1950 before you charge something against 1951?

General OLMSTED. Those were general categories in which quite a number of different types of items would be involved. For example, the general category of small arms would include rifles. It would include submachine guns, carbines, .30-caliber machine guns, .50-caliber machine guns, mortars, and so forth, so that whereas there might be an unfinished allocation in 1950, it might be a different individual item from the allocation that was made in 1951.

I do not know whether I have said that plainly enough, but to be specific, take an 81-millimeter mortar on the 1950 program. That might not have been allocated up to now because of the shortage of ammunition to go along with it. So that will show as an unfinished or uncompleted allocation against the 1950 program. At the same time rifles, which are in relatively plentiful supply, might be allocated against the 1951 program.

Mr. HERTER. You have broken here the 1950-51 appropriations into separate categories of items then.

General OLMSTED. Yes, sir.

Mr. HERTER. Entirely.

General OLMSTED. Yes.

Mr. HERTER. You cannot spend the 1950 money, even if you get an excess somewhere else, that is, you could not spend the 1950 money on that excess in a given category.

General OLMSTED. It is not so much a question of spending the money. You see, the obligations and commitments of the funds have already been accomplished.

Mr. HERTER. It is a question of your programming then?

General OLMSTED. It is a question of the delivery of the end item.

There is one other limiting factor that might seem to account for the imbalance there. That is, we only send these items forward to the country after being advised by our mission in the country that the country is ready to accept it. So that there might be an actual supply of the items available here, but our mission on the ground might say they have not activated their unit yet, so do not send the unit equipment until it is ready.

Mr. O'HARA. Could I add one thing? There is also in the 1950 program quite a number of stock materials which require repair and rehabilitation. On the material which is put under way and in repair and in rehabilitation and obligated for, at the time the Korean hostilities began it was found to be necessary for that to be used for Army purposes. At that time an equal amount of material was set aside from Army stocks that had not yet been repaired and rehabilitated. It involved a slowing down of the 1950 program, but it resulted in availability for our emergency needs of materials that would otherwise not have been in existence in a state of readiness if it had not been for MDAP.

I think that is one important thing that has resulted in some non-delivery of 1950 material.

Mr. RIBICOFF. I want to ask Mr. Bissell a question.

Chairman RICHARDS. I want to ask some questions on that.

Is your question on this feature?

Mr. RIBICOFF. No. It is on another matter, Mr. Chairman.

Chairman RICHARDS. We will come back to you then, Mr. Ribicoff.

Talking about end items, tanks, for instance, the committee noticed when it was in Europe that certain NATO outfits were crying for tanks. As I understood you when you testified yesterday, you said from the time that these tanks were programed you figured it would take 10 months before you would have the tank off the line.

General OLMSTED. That was the reorder lead time before we could get the first one. If the volume of reorder, let us say, was for 3,000, we get the first one in 10 months.

Chairman RICHARDS. The tanks you are furnishing now were programed when?

General OLMSTED. The tanks we are furnishing now were substantially all programed in 1950, although there were a few in 1951. They are not the new tanks that are being produced now, but are tanks that were World War II vintage tanks that had in most instances to be rehabilitated, that is, to be taken out of reserve, rehabilitated, and then delivered.

Chairman RICHARDS. Were you talking about the fact that you could get that tank out in 10 months on the basis of the facilities that you have for manufacturing tanks now, or the increased and expanded program?

General OLMSTED. No. That is on any existing facility. If we went, let us say, to Cleveland to reorder tanks from the Cadillac Co., we would not get the first tank—the line is running now and producing tanks, and that will run out at a certain date, I think some time early next spring, when they will deliver the last tank under the current order. If we did not place a reorder 10 months ahead of the time the last tank is delivered on the present order, then there will be a let-down in that line and a gap in delivery.

Chairman RICHARDS. There is an expanded program now to meet tank requirements over there. Were you taking that into considera-

tion, or was that on the basis of the approved requisitions of 1950 or 1951?

General OLMSTED. All of the figures that I showed you were in terms of our complete facilities today.

Chairman RICHARDS. Then after all, in your tabulations, according to the way you have to have things programmed and ordered and put in the pipeline, and all that sort of thing, there is not much difference to you between 1950, 1951, and 1952? It is just a continuing program.

General OLMSTED. That is right.

The point I want to make there, though, Mr. Richards, is that unless we place these reorders—here is a line already tooled up and already producing tanks. Unless we can place those reorders 10 months in advance of the time we expect the delivery of the first item under that order and unless we have that much time, then there will be a gap or let-down in the line on the production of it.

Mr. CHIPERFIELD. Are you making use of the tanks at the arsenals?

General OLMSTED. Yes, sir.

Mr. CHIPERFIELD. The last time I was up at the Rock Island Arsenal, which is in my district, there were an awful lot of tanks in that arsenal.

General OLMSTED. I see them quite frequently going by there myself. All of our medium tanks, we will say, that are combat-worthy for any type of terrain, are being rehabilitated and put into the stream now, and put into the program.

Chairman RICHARDS. Did you want to ask the general a question, Mr. Ribicoff?

Mr. RIBICOFF. No.

Chairman RICHARDS. Mr. Vorys.

Mr. VORYS. Do you mean to say in a tank factory, for instance—and I went through the Chrysler plant during World War II—if they had an assembly line that was all set up and they had the employees, and if you wanted more tanks, then do you mean you would have to tell them 10 months before you wanted those additional tanks?

General OLMSTED. Yes, sir.

Mr. VORYS. Why?

General OLMSTED. Well, the principal delay is on steel. Another very complex delay is on the subcontracting. Take this Cadillac plant producing there at Cleveland. We have to tell them 10 months ahead of time that we want an added tank in order to get it, because their steel reorder lead time is that difficult, and their subcontracting problems are that difficult. Those are their principal bottlenecks, and their principal difficulties.

Mr. VORYS. On their steel reorder it does not take 10 months to make the kinds of billets or plates that they need for a tank, does it? I mean, Charlie Wilson has priority and allocation powers, and if you need more steel for tanks it does not take him 10 months to give that tank factory a priority and an allocation of the kind of steel you need for a tank, does it, in order to get the steel there?

General OLMSTED. The steel people will tell you it will take 10 months to make delivery of the steel fabricated in the right form. Of course, there are many other things, as you know, that are creating demands on our steel production.

When the Cadillac Co. goes to its steel supplier for its steel order, it does not come off the top of the next day's production. It has to

take its position along with demands of similar and comparable priorities.

Chairman RICHARDS. I understood about a year ago that the chief bottleneck of the tank production business was that they did not have the necessary assembly lines, although, of course, they had the steel problem then too.

So far as that is concerned, that has been overcome, has it not?

General OLMSTED. That is substantially equipped now, Mr. Chairman. We have four medium tank lines now in operation, and two that are substantially tooled up as stand-by plants in case of a greater demand for either more rapid rearmament or war.

We have now in being four producing lines and two stand-by lines.

Chairman RICHARDS. What would be the best way to cut this 10-month business down to, let us say, 6 months?

General OLMSTED. Well, sir, I am not a production expert and I will just have to give you a reaction that we get from our production people.

I would say a much more severe invasion of our civil economy.

Mr. RIBICOFF. Right at that point, may I ask a question, Mr. Chairman?

Chairman RICHARDS. Yes. Mr. Ribicoff.

Mr. RIBICOFF. I have been very interested by the fact that the military have become such economists as to the problems of running a civilian economy and a defense economy side by side.

Now, Mr. Bissell augments it in his testimony today with the statement that what we are going to do is not disrupt anything, but go ahead for 3 years, approximately, and then we are going to have this full production and a full standard of living, and at the same time get our military production.

Is this not one of the greatest delusions that is being perpetrated on the American people, for this reason: If we are so far behind on our military production in comparison with the Russians, as was testified to here by general after general, then is it not all important that we immediately catch up with our military production and once you do catch up, then go ahead with keeping on an even balance between civilian and military production? However, first we should get the military. Let me give you an example of that.

You are short of airplane engines. I was talking to some of the engineers in charge of the procurement at that United Aircraft Co. I said, "What is the problem here? You are so far behind and you have all these orders." They said, "Well, the problem is that in the Second World War, in 1940, when war broke out, we were in a position where there was a reservoir of labor. We had just gotten out of a depression period and we had labor available. Secondly, there were strict priorities so we could get machine tools. We were in a position where we could get matériel and could work around the clock producing airplane engines. At the present time we cannot produce them because we do not have labor and are not working three shifts. We are short of machine tools and have to go out in the market to compete for machine tools with the people engaged in civilian production."

The shocking thing to me is a continuation of that philosophy by the military. I can understand why the civilian groups and Charlie Wilson would feel that way, but I am puzzled as to why the military does not have a knock-down, drag-out fight on this issue instead of playing along.

Mr. JAVITS. Will the general also include in his answer a statement on what I understand was a big issue—and not a fight or hard feelings—between Mr. Charles E. Wilson and the military, wherein Wilson said, "Let us go all out on military production until we are caught up," just as Mr. Ribicoff said, and the military said, "Let us take the middle ground and keep both a peacetime and wartime economy going."

General OLMSTED. I must say I am unfamiliar with what you are referring to, Mr. Javits. I was not in on this particular discussion.

This is the problem that our military supply people are confronted with: As I showed on those charts yesterday, we can make substantially more tanks than we are making. We do need the tanks, and we need them badly. If we went to all-out production, assuming, of course, that the powers that be would permit us to do it, and if we had the necessary funds to do it, and 12 to 18 months from now we had all of our units and the allied units equipped with arms, then what would happen?

Mr. Ribicoff. Then you go along and level off to what you think you are going to need on a month-by-month basis and go along with your production. However, at least you would have a reservoir a year and a half ahead of when you thought you would have it, and then you would at least be approaching equality with the Soviet Union.

General OLMSTED. Right—which from a military standpoint we would like to accomplish right now.

Mr. Ribicoff. Yes.

General OLMSTED. On the other hand, if 12 to 18 months from now we had all the tanks for our unit equipment for ourselves and our allied forces, then we would have all the tanks we needed, and we would have to say to our suppliers, "Shut down." We would then be confronted with the problem, if we ever had to get into production again, of reassembling these lines and this labor, and going again into full production, and our United States civil economy would follow this kind of pattern, which we fear may be exactly the objective the people in the Kremlin would like to accomplish.

Mr. Ribicoff. Except for this: Apparently the philosophy of Mr. Wilson is to build up other plants to take care of the military production, so that when these are completed you will be able to operate on the military and civilian at the same time.

What I do not understand is why you do not convert as fast as possible to military production and give that the immediate priority, and then with regard to the supplemental plants that you have, allow them to come in on the civilian economy. It is all right to say you are worried about what the Russians are going to do. We are all worried about that. That is the whole purpose of this program, but it is a cinch that what you need and need in a hurry is to be armed as fast as you can.

I will say that I am surprised that the military does not push for that.

Once upon a time the military had to fight for everything they could get. Now you are in a situation where Congress will give you what you want generally, and you are the ones stopping it and saying, "No, no. We do not want it."

General OLIVESTED. That completely reverses my role at this table. A partial mobilization is more difficult than an all-out war to manage. That is the result of the problems of manpower and matériel which arise. In every one of these decisions there has to be the best judgment of the civil and military leadership as to just where to make that dividing line, as to how many tanks, and so forth, we should build this year. It will not be all that we would like to have, or all we have an immediate need for, but assuming you are willing to give us the money, if we went all out to build tanks and then had to shut off all our tank lines, we would fear that 18 months from now, or 24 months from now, or 30 months from now, we would be in a less strong condition than we would be by establishing this rather broad production base, but having a flow of end items throttled back so that we can rather visualize a continuing period of production over the next 2 or 3 years, instead of having all of it now and then a blank period.

Mr. RIMCORA. If you can plan to do it this way, I do not understand why you cannot go up first and then level off.

Mr. VOYSE. Will the gentleman yield?

Mr. RIMCORA. Certainly.

Mr. VOYSE. Is this not a consideration? When I went through the B-24 plant at the Ford Willow Run factory, they showed us 264 changes made after the contract was let and in production. They were kicking about the lack of foresight of the Air Force.

The Air Force people with us said that every one of those were needed improvements that they discovered the hard way, through combat. It was perfectly silly to have the planes come off the line and not be the kind of planes we could best use in combat.

There was an alteration plant right at the end of the production line, to stick on to each plane the things they had thought up since it went into production.

Now, I am just taking the opposite view from you in this respect. What I am afraid of is that we may have a great, big hump, and we might have a lot of stuff that is going to be obsolete a couple of years from now.

Mr. RIMCORA. The fallacy in that argument is this: It is just as obsolete for the Soviet Union as it is for us. If the Soviet Union is building tanks and planes today that they might not use 8 years from now, well, those Soviet tanks and planes are just as obsolete as what we build today.

If you have any manufacturing experience at all you also realize that there comes some place in your line of production where you must freeze a model. In other words, if you are going to look forward to the fact that you are going to make constant changes week after week, you will never get production. Certainly there comes a stage where although you hope to get a better plane or tank, still, after all, if you are ever going to get this stuff out in mass production then some day you are going to have to say, "This is it for X period of time." If we had a great reservoir of weapons and time I would say your theory and the general's theory were absolutely sound, but when you are in a position where you are behind the 8-ball, then you

are in a position where you must catch up and then worry about refinements and improvements afterward.

Mr. JAVITS. Will the gentleman yield for one observation?

Mr. RIBICOFF. Yes.

Mr. JAVITS. Is it not a fact that we are being told constantly that the reason we have our necks out a mile, from now until 1953, is that the military units in terms of personnel could be ready by then, but the equipment cannot be ready? Therefore, is the position taken by the Defense Department consistent with this situation?

Chairman RICHARDS. General?

General OLMSTED. I just have to give you an opinion in response to that. Of these, let us say, the divisions which I showed you yesterday, that would be in a state of complete or partial readiness by this time next year, I think to that extent we would be stronger if we could equip them completely. If we had the funds it could be done.

As to the gap between those divisions and the total of the medium defense plan target, there are some factors there about the ability of these other countries that have committed these forces, as to whether they can raise them in the next 12 months.

Mr. JAVITS. You are going to have pressure to cut this bill here. One way in which you yourself could answer the argument for cutting would be if you say, "We are going to give you more for your money." I wish you would think that over.

In other words, you are going to equip your forces faster than you thought. Then it seems to me you might win over a lot of people to your side. You might well get the money you ask for if you are going to step on the accelerator.

Previously you have had cuts even on the military aid, and you may get them now. One way you could give yourselves a head start on that is by stepping on the accelerator.

(Discussion off the record.)

Mr. VOYTS. Just to refer back to obsolescence for a minute, we keep hearing around here that we are going to give this, that, or the other country some old P-51's or P-47's, and I can remember when those very planes were the answer to a prayer because they would have knocked off the P-40's that Congress is accused of refusing to appropriate for in 1939 or 1940. In any case, if the Russians have the same old tanks and the same old planes that they fought World War II with, then God help them.

Chairman RICHARDS. We took Mr. Bissell a little bit off the hook here. I thought we would let Mr. Bissell finish his statement, and then we will go back to the General a little later.

Mrs. BOLTON. I was wondering what the Captain over there had in his mind when he got up.

Captain ASCHERFELD. I was hoping to say it is all a calculated risk. If you open up production you are going to increase the cost of the equipment, because you are going to have overtime involved, and for the same money you are going to get less goods.

Mr. RIBICOFF. But when you have your back to the wall money is the cheapest thing you have.

Captain ASCHERFELD. My reply to that is that I have a certain sum of money right now in the 1950 and 1951 programs, and that has to go as far as it can and get a maximum amount of production. Therefore, we have to spend it in the most economical way.

Mr. LANHAM. May I ask a question there, Mr. Chairman? Chairman RICHARDS. Mr. Lanham.

Mr. LANHAM. In case of all-out war, how much could the program be speeded up, and how soon could we then get the necessary equipment? How quickly could we get it if all-out war came?

General OLMSTED. There is your picture of your medium tanks. It shows what the existing facilities could do if you went to a multi-shift operation. That is your gap. You can see it widens as they get into momentum over the intervening period.

The same sort of figures are available in all other categories. There is your recoilless rifle. The orders are running along at this level here, and the gap on the multishift basis is running up that way.

The same thing holds on your vehicles. Take your combat trucks. (Discussion off the record.)

General OLMSTED. That is the gap we have which we call our mobilization base, and which is comparable in the category of aircraft and fighter aircraft as well.

Mr. VORYS. Will the gentleman yield?

Mr. LANHAM. Yes.

Mr. VORYS. You pulled down a chart that I wanted to ask you about. That is this lead-time chart. How much in dollars of your program is represented by the items that have over a 10-month lead time. It looks to me like that is the electronics, radio, and radar equipment, that those initials stand for.

General OLMSTED. Could you give them the story on that?

Mr. O'HARA. The total dollars on those items which do have a long lead time beyond the fiscal year are in the neighborhood of \$2,000,000,000 out of your \$6,250,000,000. The principal categories of those items are in aircraft and ships.

Mr. VORYS. How about this stuff for the Army?

Mr. O'HARA. Electronics is another one, but electronics is not as big dollarwise.

Mr. VORYS. That is what I thought.

Mr. O'HARA. As are the aircraft and ships, that is.

General OLMSTED. Your tanks and combat vehicles in the program add up to 38 percent of the program. Motor vehicles are 17 percent. In addition to that, artillery is 9 percent. The sum of those would be 64 percent in what you would call the longer lead-time items. The balance is made up of ammunition and spare parts and short lead-time items. It is about two-thirds.

Mr. VORYS. A third of it over a year?

Mr. O'HARA. Yes, sir.

Mr. VORYS. And another third of it pretty near a year?

Mr. O'HARA. Between 6 months and a year.

Mr. VORYS. Yes.

General OLMSTED. Then I would say this would be a material factor in this consideration, too. If we were to go into an all-out war, why, the availability of materials for military purposes would change quite materially. Currently we have about 20 percent of our steel production available for military purposes, and certainly that percentage would be increased. So that would tend to shorten your bars on your lead time if you got a higher priority for military purposes.

Mr. JAVITS. Mr. Chairman, I was going to make a suggestion for a check, if it has not been made already. Those charts show what you

are counting on in the way of production by June of 1952. Can you answer categorically that the requests made of us are in exact compliance with those charts?

In other words, you are asking us for the money only to pay the bills which will result from the expectations or the forecasts based upon those charts, or is it more or less?

General OLMSTED. The money we are asking from you is based exactly on the charts that I have shown you, sir.

Mr. JAVITS. And that is as to the expectations up to June 1952?

General OLMSTED. That is right.

Mr. JAVITS. So if we wanted to question you beyond that, we would have to be in a position to say you are wrong about the production capabilities on tanks, for instance, and we can prove otherwise. Is that correct?

Mr. O'HARA. The expectations through June 1952 plus the reorder lead time for the items.

Mr. JAVITS. Of course, deliveries would come beyond that time when the production lines have a stated capacity according to the chart.

Mr. O'HARA. Yes.

Mr. CARNAHAN (presiding). Are there any further questions?

(No response.)

Mr. CARNAHAN (presiding). If not, I believe the chairman was trying to get back to you, Mr. Bissell.

Mr. BISSELL. Mr. Chairman, I do not want to talk to the committee any more. However, Mr. Vorys had asked a question, which was kind of a sample case, on Germany. I remember I was very emphatic to the effect that we are very far from taking the position that just so you pump some dollars in, regardless of what they are used for, that is all right. We are taking the opposite extreme position, that it means a lot as to what our dollars and their own dollars and other currency are used for.

Mr. Vorys then asked us a question about the commodity imports for Germany. We had not gotten that far.

I want to be sure we have answered your questions or make proper arrangements to do so. If you want, the General and I, between us, will discuss this item by item, if you care to now. Otherwise we can submit material of any kind you wish if that is too laborious a process at this time.

Mr. VORYS. You have given an explanation for the increase in imports, as to the dollar size of it, that is, because of the increase in population and the desire for consumers' goods, and the increase in prices.

Now, the thing that was perplexing me was how you could have nothing in a military program. I thought that was merely a fond hope, and your German program was based on a military program participation.

There is one other question I have, Mr. Bissell. This is the one that always perplexes me. You have \$1,518,000,000 of unexpended balance as of June 30, 1951. In these tables that you have given us, have you included that, so that the \$1,600,000,000 or the 627 should go on top of it?

Mr. BISSELL. We have, sir, in this form. As you realize, most of that unexpended balance—I do not have the exact figure in front of me—represent funds already obligated. I am sure you will have no-

ticed in all of the so-called balance-of-payment tables, but I will call to your attention the one on page 7, which is the estimated balance of payments for 14 countries, which means substantially the whole group—in line 11 you will notice an item, "Change in pipeline." That is in effect where we have taken care of that very large sum, which represents obligations already incurred for goods that are not yet shipped, and services that are not yet rendered.

You will notice there is a plus sign, another one of those rather baffling statistical indications. In effect, what this means is that in the year just ended that pipeline was reduced to the extent of \$369,000,000, and we expect it to be further reduced in the new fiscal year by \$322,000,000.

What I mean by saying that the pipeline will be reduced is this: I have to speak from memory on the base figure. My impression is we have about one billion and a quarter in the pipeline at this time, or, rather, as of July 1. That represents our procurement authorizations issued against which shipments of goods or actual rendering of services had not yet been made.

It is our estimate that what this figure of \$322,000,000 in line 11 of that table implies is that we would expect that figure to be smaller by the \$322,000,000 at the end of the current fiscal year. If my recollection about the magnitude of the pipeline is correct, that it is about one billion and a quarter, then at the end of the year it will be, as you can see, just around \$900,000,000.

To be perfectly specific and to be sure I have been responsive to your question, in our imports line and payments-for-services line, which are lines 1 and 2 of this table, and all of the country tables, we do allow for total imports, including those, of course, that are paid for with the country's own money; those that we are proposing to finance with the new year's funds; and imports financed out of previous years' funds already obligated.

The item at the end shows to the extent of something over \$300,000,000—those total imports will represent in effect a reduction in the goods already covered by obligations but not delivered at the beginning of the fiscal period.

Mr. VORYS. That last one went over my head.

Mr. BISSELL. Let me put it again.

Mr. VORYS. Look at this table where it says, "Imports, United States for 1950-51." None of the imports that have not been shipped there have been included in that?

Mr. BISSELL. That is correct, sir.

Mr. VORYS. But on "Imports, United States, for 1951-52," where it says 3,529.7, is part of that from the estimated unexpended balance as of June 30?

Mr. BISSELL. That is correct, sir.

Could I interrupt to say, Mr. Vorys, that generally we would expect that on the average 3 or 4 months of imports of those goods at the rate at which the United States is financing them—that 3 or 4 months of imports have already been covered by funds already obligated at any given time. In short, as of the 1st of July in this pipeline figure we had covered somewhere between a quarter and a third of the goods that are included in that figure of 3,529. We had already covered them out of funds already made available in previous years.

Mr. VORYS. In any case, where it says, "Total dollar aid," No. 12--1,512-B—that aid can or cannot be met by the unexpended balance as of June 30, 1951?

Mr. BISSELL. It cannot, sir, except to the extent that those unexpended balances were not already obligated or otherwise committed.

Mr. VORYS. The only amount that could be applied on that would be \$62,000,000. That is, you ended up with \$212,100,000, and you took out 50 and \$100,000,000 for the India Act, and you were down to 62.

Mr. BISSELL. Yes, sir. But as you remember, the India Act, unless I am misinformed requires that the whole \$162,000,000 be used for the India Act unless Congress otherwise provides. So that there is \$62,000,000 there, but under the present legislation that is earmarked for the India program.

Mr. VORYS. So that it is really obligated.

Mr. BISSELL. In that sense it is. Yes, sir.

Mr. HERTER. May I ask just one question there?

Mr. VORYS. Yes.

Mr. HERTER. If we sign a peace treaty with Japan early in September, does Japan come under this act?

Mr. BISSELL. Well, in the first place, as a question of organization, would the ECA be asked to do anything about that, Mr. Herter, I cannot answer that question. I do not think it has really been considered.

As to the question of substance, will it come on somebody's back other than the Department of the Army's, I have the impression it is not expected that Japan will need any direct grant-in-aid delivery this new fiscal year. However, that impression may be entirely wrong, and I do not know whether the General wants to say anything about it.

General OLMSTED. There will be an augmentation of the strength of the Japanese national police force, no doubt, which is contemplated now not from MDAP funds.

Mr. OHLY. I think you were referring to the economic side.

Mr. HERTER. Both sides, really.

Mr. OHLY. On the economic side the answer is our troops are on a partial pay-as-you-go basis, and the expenditure we are making in dollars in Japan for the support of those troops there is the equivalent of what we might otherwise have to give them as economic aid.

Mr. HERTER. As I gather it, the expenditure of the dollars there will balance the thing out.

Mr. OHLY. That is correct, sir.

Mr. HERTER. I take it that you intimated in the relief program for Korea, if there was a cease fire there, a considerable part could come from the Japanese economy again with the expenditure of dollars, and thereby help the Japanese economy.

Mr. OHLY. That is correct. If I understand it, the planning now going on with respect to post-hostility Korean relief does contemplate substantial procurement in Japan and other parts of Asia.

Mr. HERTER. From the military point of view, General, would that be done from equipment that is already over there?

General OLMSTED. That and/or indigenous production—financed indigenous.

Mr. HERTER. But it would not come under this program at all in any way.

General OLMSTED. Japan is not programed for.

Mr. OHLY. Mr. Chairman, if there are not any other general questions, do you want us to go on our country-by-country presentation, going through all of Europe, and detailing the programs in each one of these countries? We have just covered these problems generally and we are prepared to go through each of these countries, showing exactly the end items that are programmed for these forces, and what the countries will do from a military standpoint, and the way in which the economic-aid figures and the target military budgets have been arrived at, if that is the pleasure of the committee.

Mr. Judd. I want to ask one question, although it may have been taken up, because I was unable to be here yesterday. If it has been taken up, please stop me.

Doubtless you know, Mr. Bissell, that we discussed Belgium most of one afternoon. You were not able to be here so we decided to put the matter over. It merely illustrated the difficulties some of us have in finding a way to present plausibly to our colleagues, as well as to our own minds, the problem of how to get maximum production in all of these areas which have productive capacity beyond their own needs, and get their maximum productive capacity used for the building up of the military strength and economic benefit of the whole.

The illustration we used, of course, was mine sweepers being made in this country for Belgium, when there were countries in Europe that could make mine sweepers, and when Belgium was able to make small arms and ammunition that these other countries needed, but which she was not making for them because they did not have funds or were not provided funds to pay her for them. Besides, they would rather get it from us and have the American taxpayer pay for them.

I understand that you discussed this problem to some extent and said that counterpart funds could be used for that purpose. Is that the only way you see of trying to solve that problem, that is, just through the use of counterpart?

Mr. BISSELL. Mr. Judd, I mentioned two devices I think should be used in conjunction. I think in the case of Belgium both are applicable. One would be to take some of the funds in this bill, that is, some of the dollars, and procure mine sweepers in Belgium for the Belgians themselves, or for anyone of our partners.

In the case of Belgium I think it is one of the economies of Europe that is under less strain than, for instance, that of Britain or France. I would say that if we were to spend, let us say, \$75,000,000 or \$100,000,000 in this fashion in Belgium, to pick figures out of the air, that although a fair part of the dollars that the Belgians earned in this manner would have to be used to pay for additional imports because they would be producing more, that certainly with expenditures of that magnitude enough of the dollars would be retained so that it would probably eliminate any need for economic assistance.

The other device would be the counterpart device. That is, supposing we were to make available or send aid in the amount of \$50,000,000 here proposed. We could insist that the full amount of that counterpart should be made available, let us say, to other NATO countries in Europe to purchase mine sweepers or other items of the same sort produced in Belgium. You could use both of these devices to get the production.

I think if you go beyond some point, let us say, \$75,000,000 or \$100,000,000 in spending in that particular country, it would certainly

eliminate the need for any economic aid whatsoever. And, if you go still beyond that you would tend to build up their reserves.

Mr. JUDD. That raises this question: If Belgium were to do it with its counterpart, that is, provide small arms for France, which is next door, and if its own counterpart were not sufficient, then could you use some French counterpart in Belgium for arms to be produced for France?

Mr. BISSELL. Very definitely, Dr. Judd. That, more broadly, is a part of one of the two elements in this approach that I think we should use.

What I feel we ought to do, I repeat, as one element in meeting this problem, is to insist that each country begin to put aside some of the counterpart for a central pool or central fund. Probably I would suggest it should be used, on the advice of Mr. Herod and Mr. Batt of the Defense Production Board, to buy items wherever in Europe they ought to be produced. Then you can solve the exchange problem within Europe through the European Payments Union.

The only caution I want to repeat, which I mentioned earlier, is in the case of a country—and France may be one of them—which builds up its own budget to the limit, which we think it is in our interest to push it to. If they have counted on using the counterpart to meet some of their own budget, then obviously we ought to reconsider that policy.

Mr. JUDD. That brings up the next two questions that came out of what you said earlier. One is, How much counterpart is there available in these other countries to be used for this purpose in addition to the uses for which counterpart is now being expended?

The second question is, If that is a feasible method, why has it not been used in the past?

Mr. BISSELL. One reason why it has not been used in the past is that up to this moment it is still illegal for us to agree to the use of counterpart for military purposes. That is one of the changes we are proposing in this legislation. What I hope we can start to do if we have another continuing resolution in the month of August, and before we have new authorizing legislation, is not to authorize an actual expenditure of counterpart for this purpose, but at least to agree that the country shall begin to set it aside for this purpose, so that we would begin by the end of August, or September, to have some of it accumulated and ready for expenditure.

That is one reason why it has not been used. The other really is that most of the commitments of counterpart expenditures for this past year were pretty well made upward of 6 months ago, when this problem was much less real and much less acute than it is today.

Mr. JUDD. So at the moment there is no counterpart available for this purpose in substantial quantities?

Mr. BISSELL. There are some balances, and I can find out what those are. I think the uncommitted balance is pretty small.

Mr. VORYS. On that point I have been inquiring around. What is the uncommitted counterpart? Before we go to the individual countries, what is the total counterpart? I have a table here that says that as of April 30 the withdrawals were \$6,588.3. How much counterpart has there been and what is the amount that is uncommitted?

Mr. BISSELL. I think, Mr. Vorys, I am going to have to get that answer for you, but I think you would find if withdrawals are of the

nature of \$7,000,000,000, there is probably in the aggregate, and for all countries a pretty sizable sum. What the distribution of that is is something I cannot answer offhand. I would really prefer to answer your question when I have the facts before me.

Mr. JUDD. While you are waiting for that, may I ask this question of General Olmsted, if it has not been discussed previously.

One of the matters we brought up in Europe when we were there, General, was this question of their making not only spare parts and providing maintenance of end-item equipment which we sent over to them, but also the building up of their capacity to produce parts of the original assembly of a tank, let us say. That is, we make some of the parts, and they make some of the parts, and assemble them in Europe. We were told in Europe that our Military Establishment frowned on that because it wanted to be completely independent of outside sources in case something happened so that we were cut off. A tank is of no more use to us without some small parts that they can make, than it is to them without some of the big parts which we alone can make.

Is that the position that the Defense Department takes which, of course, is an understandable position, but which deprives us of many things that they could produce, such as components of these complicated mechanisms?

General OLMSTED. Mr. Judd, there are two categories involved in the answer to your question there. We are perfectly willing to build, let us say, receivers for the M-1 rifle, which is a complete part, and supply it to Italy or any of the other European countries, to be incorporated in their production of the end item, which is the rifle. We are perfectly willing to do that, but where we do not like to go along is where we get a request for components.

As an illustration, the French wanted to make, or have wanted to make, jeeps. As the engines and the transmissions were required from here and that would cut into the delivery of jeeps manufactured in the United States, which we needed badly, we said, "No. That does not make any sense." Those are our two views about the problem.

Mr. JUDD. But if we could produce some of these complicated parts in addition to our own needs without throwing our production out of kilter, and send them over to be assembled over there with the rest of the items which they can manufacture, then you would have no objection to that?

General OLMSTED. None whatever.

Mr. JUDD. In fact, you would encourage it, I would think?

General OLMSTED. That is right. We are constantly giving them drawings and specifications and trying to solve proprietary rights where patent rights are involved for these people, so that they can do that. Wherever we can produce components which would not interfere with the production of end items here in the United States we have no objection to approaching that kind of a problem.

Chairman RICHARDS. Mr. Bissell, I want to ask you this question. I want to get it straight. We left just about the time we were on that.

Did I understand you to say when you mentioned the figures for Italy that you were going to give the figures for Italy and what you figured it would have been without the military program? Is that right?

Mr. BISSELL. I did give that figure.

Chairman RICHARDS. All right. Are you trying to do that for the other countries too, and would you do that?

Mr. BISSELL. I have already gone through that and I will put the table in the record.

Chairman RICHARDS. Of what the difference would be?

Mr. BISSELL. Yes.

Chairman RICHARDS. That is fine.

(The table referred to is as follows:)

Estimated distribution of country aid, fiscal year 1952

(Million dollars)

Country	Total	Estimated aid if there were no expanded rearmament program	Aid request because of the expanded rearmament program
Austria.....	145	145	
Belgium-Luxemburg.....	50		50
Denmark.....	80	30	20
Free Territory of Trieste.....	4	4	
France.....	290	50	240
Germany (Federal Republic).....	175	100	75
Greece.....	250	175	75
Iceland.....	8	8	
Italy.....	275	75	200
Netherlands.....	155	60	95
Norway.....	40		40
Turkey.....	70	25	45
United Kingdom.....			
Total (14 countries).....	1,512	672	840

Chairman RICHARDS. Let me ask you something else. How long have you been associated with this Marshall plan program?

Mr. BISSELL. Since about the fourth day, sir, which was about the 10th of April of 1948.

Mr. HERTER. Since before it started, I take it?

Mr. BISSELL. Yes.

Chairman RICHARDS. Yes; since before it started. Of course, you pretty well know the set-up, and all that?

Mr. BISSELL. Yes, sir.

Chairman RICHARDS. Since you came into the program we have added Point 4 to it. That is, it has not been added to the program, but we have added Point 4 to the projects we have over there. Then we have added military assistance and military aid, and part of that will be for economic production.

Now, what do you think about setting up a new organization to handle it all, other than straight end items for the military program?

Mr. BISSELL. Well, sir, I would like to reply very briefly this way: I, for one, am absolutely convinced that the ECA as an entity should be terminated.

Chairman RICHARDS. As off?

Mr. BISSELL. I feel very strongly on this point, sir, that that should be done just as soon as legislative action by the Congress is completed and it is possible to do it and to know what the next stage ought to be.

Chairman RICHARDS. When do you think it is possible to do it without hurting the program? Would you say the end of 1952?

Mr. BISSELL. No, sir. I believe it should be possible to do it at the latest by the end of this calendar year.

Chairman RICHARDS. That is January 1?

Mr. BISSELL. January 1. I would like personally to see an outcome whereby whatever new organizational pattern is appropriate, is determined just as soon as possible after Congress has acted; and, whereby there was a clear decision that just as rapidly as possible the ECA will be terminated and a new organization would come into existence, and perhaps put a date on it, "no later than."

Chairman RICHARDS. There would not be any fun in just making a new organization to do the same thing ECA is doing.

Mr. BISSELL. I would say that, but I do not mean merely a change in name. I think this ought to be a real change. I am not going into the reasons for this because I think other witnesses have elaborated on it. For example, there was a job to be done. The major part of the original job is done and the organization that did it ought to disappear as such.

Chairman RICHARDS. Other witnesses' ideas on that were just as clear as mud. They have not said what should be done.

Mr. BISSELL. I have given you the first part of my answer. Would you like the negative part?

Chairman RICHARDS. All right.

Mr. BISSELL. Coming directly to your question, I think you will remember that Mr. Foster said there are several ways the organization of the executive branch of the Government could be created, that is, an organization could be created or the executive branch could be organized to handle this matter.

Without trying to say what all of those are—and I think there is an infinite number of them—I think they come down substantially to two.

I think one way is to set up a new agency, as an independent agency, as the ECA has been, to do approximately the several functions you outlined, that is, Point 4, military, economic aid in support of military production, and the other various related functions which are spread out rather far.

I think, broadly speaking, the other way to do this is to put the same collection of activities inside the State Department.

My own personal opinion is that those are the two most practical and promising of all the various alternatives that have been discussed.

I think if these activities are to be put in the State Department, some changes would obviously be needed in the internal organization of the State Department. I say "obviously" because no organization can absorb sizable new functions without there being some changes in its arrangement that would be appropriate.

I would hope if these were put in the State Department they would be under the head internally of a very senior officer within that Department who would report directly to the Secretary and the Under Secretary. But that is going rather afield from your question.

If you asked me which of these two alternatives is the better one, I genuinely, and stating my own views directly, find that extremely hard to answer. In the first place, I think I am probably a biased witness. Anyone is by his experience. I will say most earnestly and sincerely that I think either one of those alternatives would work well. I think my own personal view is that looking ahead for the long view it would be better to put this inside the State Department on one very important condition. That is, that the things were done

in the State Department that I think would have to be done to enable it to handle effectively a series of important ramified operating functions, that is, operating as distinct from policy-making jobs.

I think there would be rather drastic changes that that would call for because it would be a drastic step, and if you contemplate doing it looking ahead to the more distant future, that would probably give us a tighter governmental structure.

I think if those are not likely to be accomplished or if you desire to maintain the emphasis on the temporary character of much of what is being proposed here—and I believe it is most important to do that in dollar terms for the vast bulk of what is being proposed—if that is important those are two considerations that would, it seems to me, include the balance of advantage toward a new, comprehensive organization.

I would, however, make a very strong plea—and you may feel here I am splitting my vote, and I am not being responsive—but I would like to say this also with great vigor, just as I have said the other, that I think the change should be made promptly, because an organization like ECA cannot be held together as an efficient going concern for months and months either in uncertainty or as a dying organization.

The other point I make with great emphasis is that I do think this whole bundle and collection of activities ought to be put together in each of the two alternatives I have forecast—and there may be others, and there are others that would accomplish the result, I am convinced.—But I believe that they all ought to be put together in order to maximize our favorable impact on the rest of the world, and to minimize the cost, and to minimize the frictions between agencies as well as to minimize the cost in administrative personnel required, and for a whole variety of reasons.

However, I hope myself we will move in the next month or so toward a clean-cut action in one of these two directions

Chairman RICHARDS. Do you think we could do that and not hurt the existing program? Do you feel you could bring about that reorganization by January 1, getting the men needed in the new program from existing organizations?

Mr. BISSELL. That is my conviction, sir, if we get clear decisions all the way through.

Chairman RICHARDS. What would you do with the rest of the military aid, such as end items?

Mr. BISSELL. It seems very clear to me, sir, that the Military Establishment has to do the job, and it is really two jobs for the United States Government. They have to do the whole job of procurement in the United States of military items, because to try to split that in two pieces I am sure would lead to the wildest chaos. I think if there is going to be any procurement of military end items anywhere else, that if anybody else does it, military personnel will be prominent in it because it embodies a whole series of military decisions that so largely shape this kind of a program—the decision as to how many tanks you need; how many heavy and light tanks; and even to some extent, to an appreciable degree, the decision as to whether to concentrate the production of certain items abroad and of certain items here. Those are the decisions which have a very large military content. I gravely question whether any new agency, or, for that

matter, any existing agency other than the military establishment ought to make them.

Therefore, I think no matter which of the two alternatives I have forecast is adopted, the Military Establishment of the United States Government will have to do the job of military planning and of procurement planning in large measure, speaking of the procurement of end items. That would have to be done and it certainly has to do the whole operating job of military procurement, and that seems to me to be substantially what the Military Establishment is doing now.

Chairman RICHARDS. What worries me about that is this: If you do that, that would be the province of the armed services, and the Armed Services Committees of the Congress. What bothers me about it more than anything else is the need for end items. The volume of them would depend largely on the success of the military plan for production of end items overseas. There you have two separate fields.

Mr. BISSELL. That is correct, sir.

Chairman RICHARDS. And whether you could bring them together without injury to either operation is the bothersome thing to me.

Mr. BISSELL. I think, Mr. Chairman, it is possible that that element, if you like, of the end-item program, could properly be made the province of a part of the Government other than the Pentagon itself. Even there my feeling is it would have to proceed pretty cautiously in so doing. I think properly staffed and organized civilian agency could do the job of appraising European production capabilities. They would know a lot about what the Europeans would be able to turn out. They obviously are not going to know and are not going to be the proper people to appraise the needs of the European forces. We do not know, and I do not think there is any point in creating the new civilian organization to try to be experts on how many small arms, or tanks, or artillery a Belgian division ought to be equipped with. That seems to me perfectly clearly to be a military problem. So it is quite apparent to me up to the point where someone has decided what the Belgian or French, or other division needs in the way of equipment, that is a set of decisions that ought to be primarily a military decision.

When you get to the question of should we try to produce the small arms in Belgium and help them in doing it, or whether we should do it here, there very clearly the economic judgment enters in. However, that is not exclusively an economic judgment because a very strong strategic element enters into that.

I think it would be most unwise to make organizational arrangements that tend to leave that element out of it.

So again I think, not giving a completely effective answer, because I think there is something that needs further thought there, I think that dividing line is a difficult one to draw. It is easy to see you can separate out the decision as to how much money for end-item purchases ought to go to this country or that and say that that could be a civilian decision. However, I am not so sure of that, because that is all tied up with these other decisions I have referred to.

So I think I have to say to you that I cannot give an affirmative proposal at any rate that would completely satisfy me on that precise borderline between the military function and the civilian. There is

a whole set of functions that I think are to me, in effect, civilian, and pretty clearly ought to be, and I think they should be brought together.

Chairman RICHARDS. If you did that and fathered a new set-up and it was not placed in the State Department, would you place a termination date on it?

Mr. BISSELL. I would most certainly on the program. That, I think, is a very easy question to answer. Whether you place a termination date on the organization is a little bit more difficult, but I think I would be disposed on the whole to do so.

Chairman RICHARDS. If you put it in the State Department you would not be disposed to do so?

Mr. BISSELL. No, sir. I think in a sense the reverse is true. If you want to build a sizable permanent organization, which we may well want to do, that to my mind would be a reason for putting it in the State Department.

Chairman RICHARDS. Mr. Vorys.

Mr. VORYS. You said if it went in the State Department there were two or three very specific suggestions or changes that would have to be made. Would you mention what those are, and what your suggestions are along that line?

Mr. BISSELL. I am perfectly willing, sir, to put these forward, and I hope you realize these are personal views and I advance them as nothing else.

Mr. VORYS. I can say that everybody here appreciates your complete candor and sincerity in what you are saying, and it will be very helpful. It is understood on and off the record that we are dragging it out of you, and you are not coming here and volunteering it.

Chairman RICHARDS. Also, we know how much experience you have had in this thing, and we appreciate it.

Mr. JUDD. We have to go by somebody's judgment. We ourselves have not had the experience, and we need a frank sharing of your experience.

Mr. BISSELL. Sir, I think I can give the main change if it is understood by all concerned that I am using the license of purely personal views. I think I would put it this way:

I hesitate with a number of military gentlemen present to make any reference to unification. Nevertheless, my conception in effect would be to create, you can say, including in a sense in the place of what is now the State Department, a structure rather parallel to that which has been created in the Pentagon. Specifically, I have in mind that a possible pattern would be a Department of Political Affairs, a Department of Foreign Economic Affairs, and possibly a Department of Foreign Information, psychological defense, and similar activities, having all of them under and in the line of command sense, under a Secretary of State who, like the Secretary of Defense, would not be clearly and closely identified with one of the pieces, but would truly—and having regard to the persons on his own staff, the staff that would correspond to the staff of the Secretary of Defense as distinct from the separate service departments in the Pentagon—would truly be objective as among the different departments under him, and with no closer tie to anyone than to any of the others.

My feeling is that that is the most promising pattern of organization, if as a long-run major change in the United States Government we are to move in that direction.

Mr. VORYS. If you had unification of our economic and nonmilitary foreign activities in the Department of Foreign Affairs, or State—and it would not make so much difference what the label was—the idea would be that you would have a Department of Defense for the military, and one that was economic, and so forth, and that we would hope that that would constitute a team. Also, we would know that if they got into bad enough spats between them they would have to go to the President or the Chief Executive.

Now, just for the sake of keeping the civilian over the military, because traditionally the Secretary of State, until Harriman came along, was supposed to be the chief adviser to the President on foreign affairs, they would not be quite equal, but in some way or other you would have to put foreign business under the Secretary of State or the Secretary of Foreign Affairs, would you not?

Mr. BISSELL. I think that is what is implied, sir, in that outline. I would rather not have these remarks interpreted as expressing a conviction any more than I have earlier that one of my two alternatives is necessarily better than the other. I do not think one can make, frankly, if I may venture this opinion, a good judgment about what should be done for the next 2 or 3 years without looking at the short run as well as the long run.

However, it is my own personal conviction that if we are to move toward a consolidation under a Secretary of State that that sort of pattern would be in order.

Mr. HERTER. I was wondering, in line with what you are saying, if I could ask the general a question?

Chairman RICHARDS. All right.

Mr. HERTER. I start with a couple of assumptions. One, that you agree to the initial organizational suggestions made by Mr. Bissell, with which I heartily concur, from the point of view of relationship between the military and civilian in this operation. The second, that the total number of dollars involved is not in question. Then would it not be the simplest type of operation for the military in the distribution of the end items merely to have authority to distribute from your total production a certain amount to foreign nations as you saw fit to let them have it?

In other words, instead of our pinpointing so many dollars for military aid for one country, and another country, and another section of the world, and so on, it is a matter of military judgment as to how many tanks, guns, and so on, should go to any individual country, is it not?

General OLMSTED. Yes; that is right.

Mr. HERTER. Entirely military?

General OLMSTED. Yes.

Mr. HERTER. You are responsible for security and where you put your material of war.

General OLMSTED. That is right.

Mr. HERTER. That is, of the total material of war, as to where you put it?

General OLMSTED. That is right.

Mr. HERTER. If you have the authority to put that where you see fit to put it in foreign countries up to, say, a percentage of the total of your production of this material of war, and assuming again that

you have the money which you think will keep these pipelines full to the extent of allowing the economy of the United States to bear its load, would that not be the simplest type of operation for the military to conduct?

Then, you come to the question in the foreign field of procurement. You would consult as you do now through your country teams on the placing of any end item, or supplementary offshore procurement in those countries, and at the same time plan orders through your procurement agencies in consultation with the people who are studying the over-all economy and helping to put the heat on the building up of the local production?

General OLMSTEAD. I will have to qualify my reply, as Mr. Bissell did, by saying that this is a personal view. So much is fact: Such a plan as you suggest would greatly simplify and speed up the procedures all the way down the line. I am not prepared to say there might not be offsetting disadvantages, but let us look at the facts that are incontestable. That is one. It would greatly simplify and speed up the procedures.

From a practical standpoint, when we place an order for so many end items, we do not differentiate in the supplier's mind as to whether those items are ultimately used for United States forces or for foreign military aid and certainly not for one of our allied countries.

Oftentimes the procurement, as implemented now, might not ultimately be allocated when the items come off the line because of a change in the priorities or the situations.

Another factual statement: Prior to Pearl Harbor in the lend-lease set-up, which was comparable in those days to what our problem is now, there was no dividing of the funds or the appropriations between the civilian lend-lease and the military lend-lease. However, with the exigencies timewise and volumewise that came upon us after Pearl Harbor, the only practical means to solve the problems was to do just exactly what you have suggested, and that was what was done. There was no differentiation from the time war broke out between the funds that were made available for United States forces and those that were made available for the military portion of the lend-lease aid.

Mr. HERTER. I was going to say the funds are intermingled and they just come from two different appropriations, as things are now. They might all just as well be lumped together and the authority given to you to allocate the material as you see fit in these countries within such bounds as the Congress wants to set.

General OLMSTEAD. I would like to make it clear to you I think that in this foreign military aid, the military aspect of the foreign-aid program, that although rearmament is essentially a soldier's job and only in our procuring services are there the necessary experienced people to implement it as of today—and I might add, some of the European countries do their military procurement through civilian agencies, but I think that they have problems that we do not have because of that—nevertheless I believe that there are political and economic considerations involved in this foreign military-aid program which would make it essential, irrespective of the organizational structure, that at the Washington level, at the regional level, where we have a regional command, and at the country level, that there be

constant integration between the representatives of the United States in the diplomatic and military field.

Mr. HERRER. You have to do that in any case.

General OLIMSTED. That we have. I also suggest in your decision it might be important to have in mind that eventually one of two things will come about. Either there will be a war, in which case the theater commander becomes all-powerful and the organizational structure should not be such that it could not be separated out into a strict military organization for the prosecution of the war; or, there will be peace and these countries will ultimately attain a level of rearmament and self-sufficiency, and again your structures should not be such that the normal training functions, not only tactical training but logistical training functions that have to be implemented between the United States in relationship to its allies—the structure should be such that that would not be interfered with.

The United States learned in the last 10 years to fight a war effectively alongside of allies—in World War II, in Greece, and now in Korea.

(Discussion off the record.)

General OLIMSTED. Nothing we do with our organizational structure in my judgment should interfere with the development of that process, which is making very good progress, as evidenced by the fact that, as you know, in Korea our Greek and Turkish representatives there have fought very well.

Chairman RICHARDS. Frankly, it is going to depend on cooperation anyway. The military has the say-so now about certain things, and that works out all right, but here is what bothers me legislatively. In last year's armed services bill, or the year before, I think, we had a provision where certain ships were to be transferred abroad. That might be described as being on all fours with saying that 15 percent of these end items would be used.

A complaint was made about the transfer of these ships. You have a committee that has been dealing entirely with the military side and has not been studying this problem as it is interwoven with the economic situation abroad.

The Armed Services Committee said, "We want these ships for our own country and our own people." A law repealed that provision that was included in the law that we passed out of this committee, and enacted into law, and repealed a provision authorizing them to transfer so many ships. They then took it upon themselves to validate what they had already done by legislation coming out of their committee.

The point that bothers me is this: If you accomplished the results, it does not matter what committee it comes out of, but here is a field, the end-item field, which is interwoven with economic recovery abroad of both types. The need for these items is interwoven. That is a field that does not come within the jurisdiction of another committee, which would naturally assume this jurisdiction after this year and which should come within their jurisdiction if the military is going to determine it.

That 15 percent should go in the military budget if it is worked out this way.

There are two houses here, and you do not understand the problems of each one unless you understand how each is interwoven with the

other. That is my concern about the end-item proposal, such as Mr. Herter advocates.

I do not know any man who knows more about this whole program in Europe than he does, because he has been studying this matter for years. However, we say, "Goodby. We are through with it."

The answer to that, as I see it, is that you say these men must work together and must consult each other before they do these things, but then you establish two entirely different jurisdictions.

Mr. HERTER. May I say a word there?

Chairman RICHARDS. Yes.

Mr. HERTER. I do not think you establish two entirely different jurisdictions. What this committee is doing is reserving to itself the right to determine what proportion of the total may be turned over to foreign countries. That is within the foreign affairs angle of the problem. You have a good many other things. You have the military training of foreigners, for which money has to be authorized, the question of offshore procurement, and so forth.

In your authorizations for all of those things you have to come back to this committee each year. They would not fall in the province of the Military Affairs Committee. They would come back here because they are in the foreign field and have started here, and I am assuming would continue here.

All I am saying is that the total appropriation as to what our economy can do for the production of military goods would remain with the Appropriations Committee, and I do not think we are qualified to judge on that ourselves here.

Chairman RICHARDS. You are talking about authorizations coming back here, but what about the ship incident that I mentioned?

Mr. HERTER. Let us take a look at this table here. Here we are with I do not know how many ships. There are several hundred ships to be transferred to foreign countries right in this table here. If the Military Affairs Committee can overrule us on that, what of it?

Chairman RICHARDS. You will see when we get on the floor of the House with that.

(Discussion off the record.)

Chairman RICHARDS. It is just a question of authorizing the transfer of ships we use in our own defense establishment over which another standing committee of the House has had jurisdiction, and that caused the friction.

Mr. O'HARA. I am from the Comptroller's office of the Department of Defense. There are two problems, really. One is in connection with the ships that are affected by this law. As long as appropriations are made for Mutual Defense Assistance, whether they be made under the present pattern or some other pattern that the committee and Congress decide one, is not of particular significance, but as long as they are made for aid to foreign countries, as such, identified with an appropriation, those do not become the property, when they are procured with those funds, of the United States Navy, as such. They are the property of this program and therefore their transfer is not affected by legislation that affects the Navy.

If they are produced, however, with the appropriations made to the Navy for the construction of ships, at the end of that construction they are part of the naval ship list of the Navy and may not be trans-

ferred without the consent or specific legislation authorizing that transfer, which would go through the Armed Services Committee.

Captain ASCHERFELD. May I say that every vessel for which funds are asked to be appropriated for the 1952 program, is new.

Mr. JUDD. What was that?

Captain ASCHERFELD. Every vessel in the 1952 proposed program—

Mr. JUDD. This military assistance program?

Captain ASCHERFELD (continuing). Yes. Will be furnished from new procurement and new construction.

Mr. O'HARA. Through the use of Mutual Defense Assistance appropriations.

Captain ASCHERFELD. That is right.

Mr. O'HARA. Which does not involve the property account of the Navy.

The other thing that is proposed here is the need for meeting the flexible program that is developed out of the economic assistance program, and stimulation of additional production in Europe. That would fall in two different fields. For example, the present program might consist of considerable production of ordnance materials in Europe. It might be found on investigation of Mr. Bissell's agency that Europe is more nearly ready to pick up a larger share of electronics production. Should that case occur, if you are using an appropriation to the military departments as a measure, the appropriation for the Ordnance Department, for example, would be too large. The ordnance service and supply appropriation would be too large to provide the material required for Europe. You would either have an extra production for American purposes beyond that which you contemplated, or you would have some other dislocation within that operation. On the other hand, your Signal appropriation would be too small.

In other words, the present program does have in it the items that these countries need, which the present outlook indicates they will not be able to produce. Minor deviations from that could not be handled if you are subdividing in your appropriation for this purpose among the sixty-odd appropriations of the Defense Department that are available.

Mr. HERTER. You are speaking only of minor deviations?

Mr. O'HARA. There are some minor deviations, but there are some 60 appropriations for the Department of Defense.

Chairman RICHARDS. Considering the way it is set up in the Department of Defense, it might not be proper to put a block in any legislative machinery. If we allocated a certain percentage of new production to send abroad, that would be for this program, but what are you going to do if the United States Armed Forces want to use the new tanks that come off the line and send the old items we already have to these other countries? That would be items like these ships?

Mr. HERTER. You still have a few billions left.

Chairman RICHARDS. There was material in this program which was authorized and appropriated for under the budget of the Defense Department.

Mr. HERTER. To my mind, without wanting to get into a full-fledged discussion of the question here, those are none of them insuperable arguments. I think they can all be taken care of legislatively. How-

ever, it is terribly important to find out what the budgeting problems are from the point of view of the transfer of these things, and the bookkeeping system.

Chairman RICHARDS. I think there will be a lot of arguments about that military item.

Mr. JUDD. Mr. Chairman.

Chairman RICHARDS. Dr. Judd.

Mr. JUDD. I would like to ask Mr. Bissell this question: In discussing the two alternatives that you thought were the most feasible you said that if these functions were all lumped together in the State Department it would require certain substantial internal changes in that Department.

On the basis of your experience, do you think that those changes could be made in an old-line agency with anything like the promptness and sharpness that are possible in establishing a new agency? I am more concerned right now about what is going to happen in the next 2 or 3 years than I am in the long-range problem.

It seems to me that we have the most urgent factor for the present is the time element. In a sense we are going along now only by reason of Russian sufferance. Since time is so important I would prefer the one under which you think it can be done most quickly, promptly, and sharply.

To come back to the question, do you think the changes you seem to prefer can be worked out in the State Department or any other established old-line agency in time?

Mr. BISSELL. That is not an easy question, Dr. Judd. I think I am inclined to share the view that you have stated or implied. I think usually you can make more sweeping and decisive changes in organization, and you can get advantages of a freshness of view, and you can sometimes get advantages of new people more quickly by starting a new organization. It is a very difficult process, as you rightly say, in any permanent and long-established organization to make the changes very quickly.

Mr. JUDD. That is right.

Mr. BISSELL. I think, by the way, by the same token, that a temporary organization, so-called or actual, after a few years begins to lose the advantage.

Mr. JUDD. That is right.

Mr. BISSELL. I think that is one reason why ECA ought to be terminated and that that ought to be more than a paper transaction. That is really what I had in mind when I said I think one must look at the short run as well as the longer run. I think that that is as far as I would like to go.

Mr. VORRE. Mr. Chairman, before we ask the last of these triple-threat men who are here for his general views, I would like to have General Olmsted's opinion on whether we should have a separate economic organization, or whether it should be part of the State Department, in view of what has been said here.

You told us about the military end. Mr. Bissell expressed himself freely and frankly about the military end. Now, will you express yourself about the economic and political end of it?

Chairman RICHARDS. Before we close here, I want to say we want to hear the other member of the triplets on this thing also.

General OLMSTED. May I say something to you off the record?

Chairman RICHARDS. Off the record.

(Discussion off the record.)

General OLMSTEAD. My frank opinion about your question, Mr. Vorys, is that I do not think the organization structure is really the determining issue there. I think that competent management, both at the Washington and the regional level, as well as the country level, will get you the desired results, irrespective of how the thing ties together here.

I would say I agree with what Mr. Bissell has said, that if it is to be within the State Department there should be a division or corps of people who are specialists in the economic field and who can tie or lay their judgment down alongside and parallel to the people who are thinking essentially in terms of the diplomatic or political considerations. That, I think, makes an awful lot of sense.

Chairman RICHARDS. Mr. Ohly, how about letting us have your views about this thing?

Mr. OHLY. First, I would like to address myself to Mr. Herter's proposal. I am sorry he is not here.

It contemplates putting an authorization in a military appropriation bill so that up to a certain percentage of the amount appropriated might be used to ship military material to other countries.

In the first place, I think the amount of foreign aid should not be expressed in terms of a maximum permissive percentage. I think it ought to be a definite figure. We have to, in our planning ahead, know specifically what these countries are going to receive, and these countries have to know approximately what they are going to receive.

In the second place, Mr. Herter's proposal contemplates that the Armed Services Committee and the Appropriations Committees would determine that military aid may be sent anywhere.

I think one of the virtues of having foreign aid handled in this committee and one of the virtues of bringing the State Department into this picture is that there are political judgments involved as to whether, and if so, what amount and kind of, military aid should be sent to, let us say, Indochina; as to whether military aid should be sent to Australia. I think any foreign aid statute, such as the Mutual Defense Assistance Act, which you prepared in this committee should place certain restrictions or set certain guide lines as to how much assistance should go to any one part of the world. It is not a purely military decision.

If we were in the midst of a war, where military operating considerations require a complete munitions allocation approach, as during the last war, that is a transition we would have to make. We are not at war, although we do have hostilities in Korea. This is a peacetime program designed to prevent war, and in such a program I believe the political judgments are rather important.

I would like to say this parenthetically: While I have been with this military assistance program in the Department of State since January of last year, I was in the Department of Defense as a special assistant to Mr. Forrestal during the whole time that the program was being developed. It was the recommendation of the Department of Defense that final control over this program should be placed in the Department of State, and for the reasons I have outlined, and, in addition, because it was recognized that in the actual conduct of the program, when you got down to the country level, you must use your

Ambassador. You must use him for negotiations, and you simply have to tie the program in with your total diplomacy in that country.

The solution chosen in the Mutual Defense Assistance Program is only one solution. The solution Mr. Herter suggests is a perfectly possible solution, but the foregoing are some of the reasons why I think it is not the wisest. It would in certain respects simplify procedures, but I do not believe it would simplify procedures very much.

The Military Establishment has still got to go through the whole business of programming out this foreign aid item by item and country by country, of placing contracts for these items in connection with their own contracts, and of meshing the production of these items with their own production schedules. The problems of developing and filling requirements remain the same under either solution. They have to do that with the things that are going to go out to these other countries. It would, however, simplify your bookkeeping in that you would not have two columns in your books—an MDAF column and a straight defense appropriation column against which to make an entry when a given item comes off the production line and is shipped. It would simplify accounting and eliminate certain reports, but I would like to suggest that the great bulk of the procedures which one has to go through in operating a program of this kind would still have to be gone through under Mr. Herter's proposal if the job was to be done in an orderly fashion.

So in my own judgment, while we had certain, what you might call, institutional frictions between the two Departments when the program was getting underway, I think it is the judgment of most of us that the relationship has been a good one. It has worked and the Department of State has not attempted to substitute its own judgment for the military judgment of the Department of Defense. Where it has made a contribution it has been because there were political considerations involved.

Let me give you examples of some of the political considerations involved in these programs, even in the selection of items for them.

The Department of Defense proposed some time ago that we send a lot of napalm bombs to a Far Eastern country for use against Communist guerrillas operating there. Undoubtedly, they are very effective weapons from a military standpoint.

It was the judgment of the political office in the Department of State that the use of that type of fire bomb, with the widespread damage it would cause to the inhabitants and farms in the areas where the guerrillas were operating and which we were trying to win over from supporting the guerrillas, would do more harm from the standpoint of creating people who would join with the guerrillas than any advantage you might derive from its use in terms of the number of guerrillas you might wipe out.

I do not recall now whether the final decision was to send the napalm bombs or not, but that is one of the kinds of things that come up.

In another country several years ago the military proposed that we start a jet aircraft program. The State Department agreed there should be such a program. However, to start a jet aircraft program for this country meant starting training for jet aircraft pilots a good many months before your program really got into operation. That

meant notifying the other government, and the news becoming public, that we were going to furnish jet aircraft to its forces.

It was the judgment of the Department of State, whether rightly or wrongly, that public notification that we were putting in modern striking aircraft in this country might be considered a provocative act. Therefore, we talked the matter over and decided to wait 3 or 4 months until the situation appeared to be better. We then went ahead and approved that program.

Similarly the Department of Defense wanted to use MDAP funds to construct airfields in a particular country. The political people in the Department of State had the feeling that such action might be misconstrued and viewed as the setting up of a series of United States bomber bases under the cover of MDAP operations. So at the particular time, because this might have been provocative, it was felt we should postpone action, or at least arrange to have the fields in a different part of the country than had been originally planned.

In several cases, also, the purpose of a military assistance program is economic or political in character. That is the kind of a case, certainly, where political and military people must work closely together in developing the program. I think I gave an example in this committee last year of a situation of this type which we had in Burma. Burma is a country which is served by two main rivers. The whole country is dependent on the exports that are brought down the river from the north, such as teak, and the people in the north depend on the rice that comes from the rice bowls in the south. There vital lines of communication were cut off by river pirates and Communist groups. The problem was how to make traffic move over these arteries so that the economy of that country would not stagnate.

It was discussed with the Department of Defense and the Burmese Government, with the result that we sent 10 excess Coast Guard cutters over there after they had been rehabilitated. These boats have been a very important factor in helping to keep the rivers clear and thereby in preventing the throttling of the Burmese economy.

Another case where the political factor comes into play is in a situation like that presented by Italy. Today we are operating under the limitations of the Italian Peace Treaty. Consequently we have to look at all items in any military program for Italy to see whether, from the standpoint of proper treaty interpretation, they can be included.

I might also mention the problem of Indochina. In Indochina, as you all know, you have a very delicate balance between the French Government and the governments of the associated states.

In Indochina we are trying to do two things, namely, to provide military equipment to the French, so that they can conduct this holding operation in the north, and at the same time to build up the forces of the local governments of Vietnam, Cambodia, and Laos.

We are also trying to build up the integrity and independence and self-sufficiency of those local governments. It is therefore very important not only from a military but also from a political standpoint, that the allocation of equipment between the French Union forces and the forces of the associated states be done in a very careful manner.

(Discussion off the record.)

Mr. OHLY. Again I state we never try to interject a military judgment in place of the military judgments of the Department of De-

fense, but we can contribute, and I think we do contribute, political considerations which often materially influence military programming. Moreover, we can throw the whole weight of our diplomacy in these foreign countries into getting the support from those countries upon which the success of the program depends and into making proper use of the things that we send over.

So I think there are many advantages in tying these things in closely, as we do today, with the Department of State.

Chairman RICHARDS. Right there, suppose you tie it down and say, "It is all right to send 15 percent of this material but we say what kind of material it is and whether it fits in with the political side of the program." You would still have that.

Mr. OHLY. I submit, sir, you would have essentially the same situation then that you do today. I am talking purely to the military program right at this moment.

Chairman RICHARDS. Yes. You think you would have essentially what you have now. In effect it would be. Well, it is getting pretty late, gentlemen.

Mr. VORYS. We do not have his answer on the economic end of it.

Chairman RICHARDS. Let us get that. Can you answer that in 5 minutes?

Mr. OHLY. Yes, sir.

Mr. VORYS. ECA or ACE.

Mr. OHLY. I will give you my conclusion first and then I would like to suggest a process of analysis which I think might be helpful to this committee. Then later I would like to point out what I think are essential differences in the present problem from the problem which we faced when we set up ECA 3 years ago.

I do not know that these differences necessitate a different organizational result but I want to point them out because there has been an assumption in the minds of many of the witnesses, and I think on the part of some members of the committee, that the problem of relationship between agencies is the same problem of relationship which we had when we set up ECA 3 years ago.

Mr. VORYS. It is not in my mind, but go ahead.

Mr. OHLY. In the first place I believe there should be an independent economic agency, or an independent agency to administer economic aid. I personally believe it should not be placed in the State Department, and I think the dislocations involved in putting it in there are such that the process would be a long and difficult one, as Dr. Judd suggested.

I have some doubts as to whether to place point 4 in that agency. My own inclination favors doing so, but I can give one important argument for a different result.

In the first instance at least, the ECA operation was an operation of supplying goods and commodities on a rather large basis to meet balance of payments deficits.

The point 4 operation has been a much more intimate grass-roots operation involving technical personnel working at the village level in various countries. I would not want to see that type of personal grass-roots approach, which I think is terribly important, swallowed up in a very large supply operation. That would be a fear on my part, except for the fact that ECA has in the last year been conducting in the southeast Asia area, through its special technical

missions, operations that in many ways resemble the point 4 operation. They are usually point 4, plus a little more in terms of supplies and economic support, but they resemble it.

I do not know—and cannot judge from my own examination, because this is a part of the program I know much less about than the military side—whether it might be possible to bring point 4 into this organization without losing this very different and very valuable type of approach which I think has characterized point 4.

I think, certainly, if you did have an over-all economic organization of this kind, you would want to recognize this distinction in its internal set-up, and have one part dealing with supplies, and another one concentrated on the kind of things Dr. Bennett and his organization have been concentrating upon.

I think the big question is not whether you have this separate agency, which I believe we should have, but where you place the focus of responsibility for tying this whole thing together. In other words, where is your top administrator, and what kind of duties and authorities do you vest in him?

I do not think that the economic and military programs, either in their formulation or their conduct, can be separated out as completely as we sometimes do in talking about them. They are two distinct operations, but they have to be blended together and not just in a single policy decision early in the year that a certain country will get X amount of military aid and Y amount of economic aid. They have to be blended and harmonized as you go along, and adjusted as you discover new production possibilities in a country.

If the country fails to meet, or exceeds, a military force target; if its legislature appropriates the budgets you had anticipated, or something more, or something less; if it undertakes, fails to undertake, or surpasses the production goals that have been set—under any of these circumstances you have to reexamine and possibly adjust your programs. You have to adjust not just the economic side of the program, or the military side of the program, but you have to look and see in what way those total resources you are going to use for this particular country can have their maximum impact.

I would like to give you an illustration which comes out of our experience of the last few months. I guess it was in January, that ECA made the decision that it would no longer allocate economic aid to NATO countries from the balance of its fiscal year 1951 funds purely on the basis of the so-called Snowy-Marjolin formula. It was decided that the amount of economic aid still available for allocation by ECA should be related to the commitments of these governments to increase their military expenditures, and to engage in a series of specific military tasks.

Representatives of the State Department, the Department of Defense, and ECA sat down together, here in Washington, and similarly in the embassies overseas, and decided just what do we want to urge each particular country to do over the next 6 or 8 months? What do we think they can do? How much economic assistance do we need to provide them with in order to permit them to do those things we want them to do?

That involved the three agencies going over jointly the military budget of the country. ECA would examine the budget from the standpoint of its total adequacy, from the standpoint of what the

ECA thought the country could spend for defense from the economic resources available to it. The Military Establishment would make a study from the standpoint of seeing whether the production scheduled under the budget made sense, and whether we should try to persuade the country to produce different items. Similiar consideration was given to the forces prepared and the facilities to be provided. We might think they were spending too much for things like cavalry farms, and that they should be taken out of the budget. Through such studies and joint consideration we developed a Government position with which we went to the other government and said, "If you will pass a budget of approximately this size"—and you can never be exact in these things—"and will concentrate under that budget on these types of production on raising forces of the size you say you are prepared to raise, et cetera, then we will be prepared, within a certain period of time, to provide you with this much economic aid."

That process has been gone through with every one of the North Atlantic Treaty countries to which we have been extending economic aid, and it is a continuous process. It is going on right now in terms of the kind of things we will ask these governments to do if we receive the appropriations we are requesting, and in terms of what we would be prepared to do by way of economic aid if they will reach not only the level of military effort which we believe they can, but also channel that military effort into certain particular channels.

That means that administration of aid becomes in part a continuing process of persuasion, a continuous process of trying to persuade these governments to do things that are difficult for them to do.

Mr. VORYS. Would you permit an interruption?

Mr. OHLY. Surely.

Mr. VORYS. Could you tell of your batting average, or give a guess or an estimate, any of you here, as to how much, if any, the military budgets have been raised? I want not promised to be raised, but how many of them have been raised during the course of the year, and how much?

Mr. OHLY. All of them, Mr. Vorys, have been raised, and raised very substantially. I could give you the figures of the 1950 military budgets as compared to the 1951 budgets. For Europe as a whole their budgets have gone up \$2.8 billion. We run into certain problems in stating this accurately due to the fact that you have conflicting fiscal years in these countries.

I have a table here which I believe we furnished to the staff of military expenditures and budgets in each of these countries.

Mr. VORYS. All right. That is good enough.

Mr. OHLY. I believe very sincerely that part of that increase has been due to the continuing process of persuasion that has been going on.

Mr. CARNAHAN. It has also been due to the fact that you supplied the economic assistance which permitted them to come through with this extra military assistance.

Mr. OHLY. That is partly correct. Of course, a good deal of the economic assistance they have really needed for economic purposes, but we have conditioned it upon their agreement to undertake certain military tasks.

Mr. CARNAHAN. That is what I am saying. They felt they had to have additional economic strength before they could do anything

much themselves, and until they did get it they could not devote their efforts effectively to anything else.

Mr. OHLV. That has certainly been an influential factor. I do not want to leave the impression that many of these countries have not been eager and desirous of increasing their budgets, because they have been. However, I think the process of persuasion and of negotiation has brought them further along than they would otherwise have come.

Obviously, if you are going to carry out a continuous negotiation of this kind it seems to me you have to tie together the activities of the three agencies and that the conduct of the negotiations must be under the general direction of your Ambassador who is the principal representative of the United States in those countries. You have to remember that in many of these countries a request to increase their military budgets is only one of 50 things we may be requesting from a country at a particular time.

We may also be trying to get them to send troops to Korea; to vote a certain way in the United Nations; to increase their forces in Indochina; to sign various trade agreements. We may have all of these things under negotiation at a given time and we must consider them together so that priority matters receive priority attention and so that, as a whole, our negotiations achieve the best aggregate result.

I believe that means the State Department and particularly the Ambassador must play an important role in the conduct of all these programs.

If you will bear with me a few minutes more I would like to suggest three ways in which I think the problem we now face is different from the problem we faced at the time we set up ECA.

First is the fact that in the European recovery program we were essentially doing something which the Europeans wanted us to do. We were pouring goods into Europe to help them get back to a decent standard of living—a level at which they could subsist. In doing that we sometimes asked them, as a condition of our aid, to do things which were unpopular with particular special interests in those countries. However, on the whole our aid was welcome. It was not a tough bargaining problem in the same sense that we have a tough bargaining problem now.

The problem we have now is to get these countries, with the help of our aid, to do things that are difficult for them to do. They are difficult to sell to their parliaments. It involves negotiations of the type that I have been talking about—negotiations of a type which involves our total diplomacy and which I do not think were involved in the day-to-day conduct of the European recovery program.

I would be very interested in having Mr. Bissell's comments on that, but that is a personal reaction.

In the second place, we should remember that this whole program in Europe is designed to carry out the purposes of the North Atlantic Treaty Organization and to support the decisions which are being made from day to day in that organization. It is not an operation which is being carried on unilaterally by the United States, even though we now reserve to ourselves the right to make the final decisions on the program. That means that you cannot conduct this program, or at least place the central direction of the program, in a different place from the one where you place the central direction over the participation of our representatives in all the North Atlantic

Treaty Organization countries. We cannot have Mr. Spofford taking a position in the deputies inconsistent with any of our aid policies, or receiving his instructions on what to do from different people than the people who are administering aid. The two have to be tied together.

The people who are handling the North Atlantic Treaty Organization have to be the same people, at least in Europe, who are working on the problems of military and economic assistance to Europe.

Chairman RICHARDS. Granting all that, ECA is an independent agency now, but the very things you are talking about now as desirable are being done. You are saying that it works very well. If it will work in the case of one or two organizations, why would it not work with one or two other functions?

Admittedly you are talking about essential aspects—policy collaboration and over-all direction from the President to the State Department. That is what I mean. You have to have it. There were a few people who may have contended that it did not have to be when ECA was set up as an independent organization, but there was not anybody who had anything to do with it who did not admit there had to be that collaboration.

Mr. OHLY. The thing I am stressing, Mr. Chairman, is that the type of relationship between this independent economic agency which I said I believe should exist, whether it is a continuation of ECA or a new agency, is a different type of relationship in certain respects from the kind of relationship that existed between ECA in the conduct of the Marshall plan and the Department of State. I do not mean the State Department should go in and supervise operations. That is the main reason for putting it in an independent agency. I do suggest that because the administration of economic aid must be part of the totality of the negotiations which are going on continuously with these countries to persuade them to do things they often do not like to do, the administration of aid must be tied in closely with the Department of State.

Moreover, because of the close relationship of aid administration to United States participation in the North Atlantic Treaty Organization, which heads up to the Secretary of State, I think the direction of both operations must be tied together.

Thirdly, of course, there is this difference that you have got to relate the work of this independent economic agency on almost a daily basis, particularly in the countries, with the work of the Defense Department in carrying out the end-item program.

I think those are three distinctions in the present situation from the situation which we faced in setting up ECA, with whom our relationships have been extremely good. The ECA operation has been, of course, an outstanding success in bringing recovery to Europe.

It would be very interesting to have Mr. Bissell's comment on those differences.

Mr. VORIS. It seems to me you left out the big difference, and that is this: ECA was started as a temporary emergency agency for a 4-year plan—period, end, stop. Whatever we are doing now, we can kid ourselves, it seems to me, and say, "Well, we are going to make it a dead line of 1953," and try to kid ourselves that it is emergency and temporary in character. However, when the optimists say 10 years is the period of tension here for the military end of it, and when we are told that a lot of this is economic aid of various kinds, whether

you label it point 4 or not, and that it is going to be like the brook, going on forever, then we are not talking about a temporary agency any more.

It seems to me that is one big difference between the origin of ECA and this thing. We are just kidding ourselves and trying to kid the public if we try to claim what we are doing is a temporary emergency thing.

Excuse me.

Chairman RICHARDS. John, I think everything in there could very reasonably have a termination date except the objectives of point 4 in this program, do you not?

Mr. VORYS. No.

Chairman RICHARDS. You do not?

Mr. VORYS. No.

Mr. CARNAHAN. The over-all efforts we are engaged in will group themselves into different phases. We have practically accomplished one phase of the problem, economic recovery, then the problem confronting us for the next 10 years or so will demand an emphasis on doing a different job. The over-all problem appears to be shaping into three principal phases (1) economic recovery, now very well accomplished through ECA, (2) creating and building up necessary military strength, and (3) maintaining economic and military strength.

It seems to me that we can have agencies that have a termination date.

Chairman RICHARDS. Well, Mr. Vorys' argument was that they would all be in line, and if you are going to do this thing put it in the State Department. Do you admit that?

Mr. VORYS. No. I am not sure yet just how it should be organized. In NATO the treaty runs for 20 years. Point 4 runs forever, and ever, amen. As to ECA in Europe, we have dear old Iceland with those little fish, and if they do not swim back we will have that forever.

Chairman RICHARDS. It does not mean that you are going to keep on doing this thing at all. They may think you are going to do it. If they are going to keep this up forever, this country will be busted from here to breakfast, and we are not going to do it.

Mr. VORYS. Just keep that in mind.

Chairman RICHARDS. Yes. Keep it in mind.

Mr. VORYS. Take it the other way. You say, "Well, we have heard secret testimony and so forth that 1953 is it. Therefore, we are going to make a termination on our military aid to Europe in 1953."

Well, one thing or the other would happen. If they believed it they would say, "Oh, fine. They just get us all fixed up and then they leave us, and there they go again back home."

The thing is that they would not believe us. They would say, "That is like the ECA. They put in those words to make people feel good at home."

Mr. CARNAHAN. Is it reasonable to expect in the next 3 years to reach a certain military strength in Europe. We should certainly exert a reasonable effort to reach the desired point. After we reach that point the problem will then become one of maintenance.

Chairman RICHARDS. I do not know what you are going to do but I must leave. What are we going to do in the morning? Are you through with these gentlemen?

Mr. BATTLE. Do we have a session tonight?

Chairman RICHARDS. Not tonight. We are going to be here in the morning. We have some other witness coming up in the morning.

Will you gentlemen be available if we feel we want to hear from you some more later?

Mr. OHLY. You had expressed a desire before for a country-by-country presentation of all these programs. We are prepared to do this at any time, to show you each item that has been planned.

Chairman RICHARDS. We have your formula down pretty well, and you can give that for the record if we call you a little later. You went over one illustration of that. It may be that the committee will want you back here, but we do have these other people listed from this morning.

Mr. VORYS. You do not want these fellows in the room tomorrow morning necessarily, do you?

Chairman RICHARDS. We thought maybe you would be available Monday or Tuesday if we could get you up here. Could you do that?

Mr. OHLY. Certainly.

Mr. BISSELL. Surely, Mr. Chairman.

Chairman RICHARDS. The committee stands adjourned then until 10 o'clock in the morning.

(Whereupon, at 5:55 p. m., the committee adjourned until 10 a. m. the following day, Saturday, July 28, 1951.)

(The following was submitted for the record:)

COMMITTEE FOR ECONOMIC DEVELOPMENT,
Chicago, Ill., July 27, 1951.

The Honorable JAMES P. RICHARDS,
United States House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: In response to the recent request of your committee I submit for consideration a statement on behalf of the research and policy committee, Committee for Economic Development, concerning a program of military and economic aid to Western Europe. I trust that the statement will be published as part of the committee's records.

Sincerely,

MEYER KESTENBAUM,
Chairman, Research and Policy Committee.

STATEMENT ON THE MUTUAL SECURITY PROGRAM, SUBMITTED ON BEHALF OF THE RESEARCH AND POLICY COMMITTEE, COMMITTEE FOR ECONOMIC DEVELOPMENT, BY MEYER KESTENBAUM, CHAIRMAN

This statement presents the views of the research and policy committee of the Committee for Economic Development on the problems of military and economic aid to Western Europe.¹ These problems were studied for several months by a CED subcommittee on international economic policy under the chairmanship of Mr. Gardner Cowles, president of the Des Moines Register and Tribune and Cowles Magazines, Inc. These studies led to the preparation of a policy statement entitled "Economic Aspects of North Atlantic Security," released on May 9, 1951. Copy of the policy statement is attached. The present statement is essentially a summary of that document.

I. We are convinced that the Soviet threat to the freedom of Western Europe is as great today as at any time since the end of the war. We believe, further-

¹ The Committee for Economic Development is an organization of businessmen formed to study and report on the problems of achieving and maintaining high and secure standards of living for people in all walks of life through maximum employment and high productivity within a free economy. Its research and policy committee issues from time to time statements of national policy concerning recommendations for action which, in the committee's judgment, will contribute to maintaining productive employment and high living standards. A list of the members of the CED research and policy committee is attached.

more, that our own self-interest, our treaty obligations, and our cultural affinity with Western Europe all require that we share fully in strengthening the defenses of Western Europe against the Soviet challenge. On these propositions, of course, there is fairly general agreement in the United States today. There seems to be less agreement, however, on the nature of the broad strategy that we should employ in seeking to thwart Russia's hostile designs on Western Europe. This question was carefully examined by the committee.

Our strategic thinking must depend, of course, on our analysis of the precise nature of the threat we are combatting. Is it the danger of military aggression, either in the form of a general onslaught by the Red Army or in the form of local Communist aggression on the Korea pattern against a European country? Is it the danger of political and economic decay in Western Europe, which will leave Europe prostrate and incapable of resisting Soviet expansion? Is it the danger of internal subversion by native Communist parties trading on weaknesses and inequities in the political and economic structure aggravated by rearmament?

It is clear that the threat to Western Europe embraces all of these possibilities. It is doubtful, indeed, whether the Politburo knows today what tactics it will employ a year hence. The hypothesis which is probably valid and certainly safest is that the Russians will exploit weakness and vulnerability wherever they may appear. The provocation which the Soviet rulers will always recognize is the provocation of opportunity. If a year or two hence the western powers have failed to organize sufficient military power to offer effective resistance, the Soviet strategists may decide to strike sooner rather than later. If, on the other hand, the western powers should commit themselves to an all-out mobilization which would, if sustained over a long period of time, impair their underlying productive strength and leave them economically exhausted, the Soviet leaders might decide to bide their time. Likewise, if European rearmament should force a sharp reduction in European living standards, seriously aggravate inequities in the distribution of income, and give rise to an explosive inflation, Soviet tactics might well revert to the emphasis on internal subversion which characterized the years immediately after the war.

Given the flexibility of Soviet tactics, it is clearly the task of the western powers to organize a comprehensive and balanced security program which leaves no breach wide enough to invite a Soviet thrust. In view of the present military weakness of the western alliance, first priority must now obviously be given to rearmament. The rearmament effort must be on a scale sufficient to create within 2 or 3 years a military force able in the event of open war to check an onslaught by the Red Army until the full war potential of the United States and the allied free nations could be mobilized and brought to bear on the aggressor. At the same time, it must not be on a scale so vast that it cannot be sustained during a long-armed alert without undermining political stability and economic strength. It must be organized and administered so as to minimize harmful effects on living standards, on economic stability, on productive efficiency, and on economic growth. It must be accompanied by positive measures, both national and international, to raise the productive strength and efficiency of Western Europe and the morale and spirit of the European people. In brief, it must take place in a climate which sustains and strengthens the hope of the people of Europe for a better future as free men.

Next to the failure to rearm, perhaps the costliest error that the United States and its allies could make in the next few years would be to act as though rearmament and security were synonymous. The contest between the Soviet Union and the West is ultimately a contest of strength, not of arms alone. Strength embraces not only armed might, but in addition all those less measurable elements—such as greater productivity, efficiency, equity in the distribution of income, political and economic stability, and social cohesiveness and spirit—which are the real sinews of national power. The Marshall plan, which has been the most successful element in our postwar foreign policy, was successful precisely because it recognized and emphasized the economic and social aspects of European security. It is imperative that this emphasis be preserved and sustained in the rearmament period upon which we are entering. The rearmament program must be regarded as supplementing, not replacing, the cooperative effort to build a productive, stable, and united Western Europe.

II. How much of a rearmament program can the continental European members of NATO support out of their own resources without jeopardizing their political, social, and economic stability? While no one can answer this ques-

tion in exact quantitative terms, we believe it is possible to weigh the factors which are pertinent to this judgment. Our analysis leads us to disagree both with those who hold that the continental countries are so weak and unstable that they cannot safely undertake any expansion in their military programs, and with those who would ignore economic and political limitations and would insist that the continental countries rearm up to the limit of their physical potential.

We believe that the continental countries of Western Europe are capable of making a substantial contribution to the combined rearmament effort. While a major rearmament program would have been inconceivable in the conditions of 1947-48, the tremendous economic advances which Western Europe has made under the Marshall plan today provide a margin of resources sufficient to support a higher level of military preparedness. Moreover, considerable scope exists for the expansion of European output above present levels. Much of the European investment in productive facilities which was made possible by the Marshall plan will begin to bear fruit in 1951 and 1952. The growth of Western European agricultural and industrial output continued at a steady rate through 1950, and further growth is possible in the years ahead. There are several million unemployed workers in Italy and Germany, and there is substantial concealed unemployment—i. e., meagerly productive employment—in France and other countries. Further additions to output could be obtained by attracting women into the labor force, by raising productive efficiency through increased specialization and trade within Europe, and by continuing the present ECA Technical Assistance Program under which United States technical experts contribute advice and assistance to European producers, and European technical personnel study American productive techniques in this country.

At the same time, there are important limitations on the scope of the continental rearmament effort which it would be perilous to ignore. First, it must be kept in mind that the rapid economic recovery of these countries since early 1948 was from a level far below prewar. Per capita consumption in Italy and Germany is still substantially below prewar, and in France, large sections of the population have a standard of living very materially lower than in the 1930's. In addition, the coal production of the four major continental countries is still below prewar, and their food production has not risen as fast as their population.

But the most serious limitations on the ability of these continental countries to rearm rapidly become apparent only upon examination of the problems of managing the diversion of economic resources from civilian to military uses. A government can accomplish this diversion in any of three ways, or by some combination of them: (1) It may employ fiscal or monetary measures, such as drastic increases in taxation, reductions in nondefense spending, and strict control of credit, while relying on military orders and the operation of selective credit controls to divert economic resources to military production; (2) it may suppress the price inflation accompanying the enlarged military production demands by the use of direct controls, such as price and wage control and consumer rationing, while employing priorities and allocations to move resources into military production; or (3) it may simply employ or permit open inflation, using bank credit or the printing press to the extent necessary to outbid civilian demand for labor, production facilities, and materials.

In the major continental countries, however, there are unusually formidable obstacles to the successful use of the first two methods, while the method of unrestrained inflation would have economic and political effects fatal to effective rearmament and to the value and reliability of these countries as partners in the North Atlantic Treaty system.

The governments of these countries tend to be rather unstable coalitions embracing divergent political and economic opinions. Such governments have great difficulties in raising taxes, in reducing less essential government expenditures, and in mobilizing public opinion. Their budgets are already heavily loaded with social security charges, pensions, and other politically sensitive transfer payments, and with large public investment programs necessitated in part by the relative timidity of private capital. Though their public revenue systems are antiquated and inequitable, they are already drawing off a large percentage of the national income. Personal savings are at low levels. The history of their currencies over the last generation and the uncertain prospects for their future have severely impaired public credit.

Moreover, the sensitivity to price inflation in these economies is great. The history of periodic inflation over the last generation has produced an abnormal

sensitivity by all economic groups to price increases. With any inflation scare, liquid holdings are invested in goods or black market gold or dollars, thus forcing up prices and black market exchange rates and aggravating capital flight. In these circumstances continental finance ministers and central bank officials have a deep-seated fear of inflation and of central bank financing which helps to account for their caution in expanding their military budgets.

This is not to say that the governments of these countries are not aware of the Soviet peril to their independence, nor is it to say that they underestimate the urgency of the need for rearmament. It does mean, however, that the continental governments must operate within a range of policy alternatives which is narrowed considerably by the economic vulnerability and political fragility of their societies. What may appear to be an inadequate rearmament effort when judged in terms of the tolerances of the United States and British economies may very well be substantial in the context of the economic and social capacities of the continental countries. It must be recognized that the instability of the political situation and the strains in their societies and economies have imposed limits on the extent of the rearmament effort which their governments can undertake. This is an unwelcome conclusion, but it is a conclusion which we can ignore only at our peril.

Before the Korean War the continental members of NATO are reported to have had about 1,000,000 men under arms, but were spending for military purposes only about \$2.75 billions annually, or about 5 percent of their combined gross national product. On optimistic assumptions these countries might be able over the next few years to double their manpower under arms, and perhaps to approach a doubling of their combined gross product devoted to armament. If the political difficulties can be resolved, Germany might be able to make a contribution of proportionately similar size in relation to her gross product.

III. The productive resources which Europe devotes to an expanded military program will have to come either from increased production over present levels, or from cuts in European consumption, nonmilitary government expenditures, investment, or exports. It has already been pointed out that there is considerable scope for the expansion of European output. To the extent that this potential is realized, the European NATO countries will be able to make their contribution to the joint rearmament program without subjecting their economies to severe strain. But it would be too optimistic to count on an expansion of output sufficient in a short time to make possible a rearmament program of the magnitude required. Thus, while it will not be possible to avoid some reductions in the nonmilitary uses of output, it must be urged as a matter of the highest importance that these cuts be made where they will do a minimum of damage to the economic strength and political stability of Western Europe.

It is relatively easy in the short run to mobilize resources for rearmament by taking labor, materials, and end-products away from the export industries. To some extent this will be unavoidable, since some productive facilities now being used to produce goods for export will have to be converted to the production of military goods—for example, the use of automobile plants to produce military vehicles. But it is important, in the larger strategy of sustaining the economic health of Europe, to hold to a minimum the curtailment of European exports. There is great danger that the export markets which Western Europe lost during the last war, and slowly and painfully regained from 1946 to 1950, might be lost again. The prospect of a Western Europe able to support itself by two-way trade in the world economy might again become as remote as it seemed in 1946. If this happens, one of the most important achievements of the Marshall plan period will have been nullified. Accordingly, the United States should urge the European governments to take the steps necessary to sustain exports, and should administer and allocate United States aid so as to encourage such a policy.

Cuts in consumption could also release resources for rearmament, but it would be perilous to ignore the fact that there exists little margin for curtailing European consumption without inviting social unrest and mounting internal political tension. The people of Western Europe have been on short rations for a decade. The courage and spirit of many Europeans have been sustained in the difficult years since the war by the hope for a better future. To replace this hope with a call for severe belt tightening raises the danger of opening a political breach as wide as the military breach which this policy is designed to close.

It may well be that a modest and temporary reduction in consumption standards is unavoidable. How such cuts will affect morale, however, will depend

to an important extent on whether or not the burden is shared equitably by different groups in the population. If the curtailment of consumption is enforced by inflation, or by increasing already excessive sales taxes and other indirect taxes, a disproportionate share of the burden will fall on the lower-income groups. The adoption of equitable taxation policies by the European governments can do much to minimize the harmful morale effects of consumption cuts.

Improvements in the efficiency of governmental administration and elimination of nonessential activities would make possible significant reductions in the non-military expenditures of the continental governments without impairing necessary public services. Such reductions can and should be made, and the United States should use its influence to encourage administrative reforms.

Domestic and foreign investment would be the area in which the deepest cuts could safely be made if the objective were to achieve a maximum of military power in anticipation of an inevitable and imminent war. Such a policy might be disastrous, however, if the present crisis should develop into a long armed alert. The failure to maintain a moderate rate of capital formation over the years ahead would dash the hopes of the people of Western Europe for a gradual improvement in their condition of life, and would dangerously weaken European morale.

The Western European countries cannot allow their economies to stagnate as the price of a rapid military build-up. They must maintain a moderate and steady rate of growth in their industrial and agricultural productivity. However, since the Marshall plan made it possible for some of the European countries to maintain an unusually high rate of capital formation, it would appear that some selective reductions in investment could be made without seriously adverse effects. Some pruning could be made in the area of retail and wholesale trade, in road building and similar types of public investment, and in other areas not directly related to industrial and agricultural production.

We conclude, then, that the resources for European rearmament should come to the maximum extent possible from increased output—and the possibilities here are substantial. They should come from reduced exports only to the extent that a reduction in exports is unavoidable, from reduced consumption only to a minor extent, from governmental economies to the extent possible, and from selective cuts in investment designed to release some resources from this area without impeding fundamental economic growth.

IV. These considerations clearly point to the need for substantial military and economic aid to the continental countries. Without access to military plans and estimates, it is not possible to say what contributions in military equipment, in forces, and in economic assistance are necessary; but certain qualitative conclusions are reasonably clear:

1. The continental countries can be expected to contribute a very large proportion of the manpower requirements of Western European defense; but a large part, perhaps the major part of the equipment requirements must be supplied by the United States and Great Britain.

2. For the near future, the rearmament effort of the continental countries will not have reached the point where it increases very significantly their immediate ability to repel aggression. Accordingly, it is during this period of 1 to 2 years ahead that the presence in or immediate availability to Europe of American and British divisions and air groups is most important.

3. The position of Great Britain must be distinguished from that of the continental countries on a number of grounds: the substantially higher real per capita income of Britain; its economic recovery, which made possible the suspension of Marshall plan aid in December 1950; the strength which Britain derives from her position as center of the sterling area; and most important of all, the high level of national cohesion and the comparative stability of governmental authority which exists in Britain. For these reasons we can fairly expect from the British for the time being a military effort substantially larger in relation to their resources than in the case of the continental countries. Britain's present military program is in fact larger relative to her national income than the likely maximum military effort which the continental countries can achieve.

4. The continental countries will need general economic aid from the United States, Britain, and the British Commonwealth of Nations in addition to the projected transfers of arms and military equipment. In view of the sharp increases in the prices of food and raw material imports, and the likely effect of European rearmament on import needs and export availabilities, the continental dollar deficit seems likely to increase again. Moreover, the effect of the rearma-

ment boom on prices in the sterling area has created a very large sterling deficit for the continental countries. Since their sterling imports are to a large extent essential materials and foodstuffs which cannot be foregone, these countries will also need special sterling assistance.

5. It is not possible, on the basis of the data available to us, to make an estimate of the cost to the United States of military and economic aid to Western Europe on a scale consistent with the considerations advanced in this policy statement. The administration program of aid to Europe, both military and economic, totals nearly \$7 billion for the present fiscal year. This is a substantial sum which should have the most careful scrutiny before funds are voted. We do not base the information needed to enable us to judge whether the total amount requested is necessary. If, on the basis of detailed data submitted to your committee, the full amount is justified, the cost is one which, in view of the incalculable consequences of failure, the United States should be prepared to assume.

V. The major question concerning the content of United States aid to European rearmament is the extent to which it should be provided in the form of military equipment (end-item aid) and in the form of civilian goods or services or free dollars (economic aid).

There appears to be a widespread confusion over this question, which manifests itself in a tendency to exaggerate the importance of the choice between end-item aid and economic aid. It is erroneous to regard end-item aid as facilitating the realization of nonmilitary objectives. Actually, as a matter of principle, once the detailed targets of European rearmament are set, these targets could be reached by either of these roads. Thus, if all aid were given in the form of military end items, it would be possible to concentrate European industry and labor more heavily on export, closing the balance-of-payments deficit and making economic aid unnecessary. Conversely, if only economic aid were given, the European countries could divert facilities and manpower from production for export and domestic consumption to produce their own military equipment; the balance-of-payments deficit resulting from the necessary increase in imports of consumer goods and reduced exports would be covered by the economic aid. Thus in either case, United States aid would contribute to the realization of military objectives.

In practice, aid should be given in both forms. It will probably prove expedient to give most of the aid in the form of major military end items, such as aircraft, tanks, artillery, and the more complex forms of signal equipment, while the continental countries concentrate on the production of other vehicles, of the smaller and simpler ordnance items, and on the general support of NATO forces stationed in Europe. But modifications of the program will have to be made as the situation changes and some provision for administrative flexibility in shifting funds from one category to the other would appear to be desirable. To make a rigid legislative allocation of funds between the two categories would rule out the possibility of adjusting the form of aid in particular situations in order to achieve maximum efficiency in the combined military-production programs.

As concerns the administration of United States aid to European rearmament, the most important consideration is the conception and the purpose with which it is carried out. If it is handled passively, simply as a problem of transferring resources to Europe, it will accomplish only a small part of its potential. Only if it is used as a means of effecting a coordination of military effort and economic policy among the NATO governments can we hope for results in Europe commensurate with our economic sacrifices and those of the Europeans. This problem of conception and purpose is central; the forms and techniques of administration should serve that end.

Authority for the administration of aid should be centralized as much as possible, both in Washington and in Europe. Economic aid should be administered as at present by the ECA or by whatever new foreign economic operations agency may be established. This agency should act as claimant agency for foreign requirements, and consideration should be given to vesting in this agency authority to administer United States export controls and to procure from abroad materials in short supply. Military end-item aid should continue to be administered by the military departments. Close coordination of the administration of economic and military aid is essential to an effective foreign-aid program.

VI. The rearmament of Western Europe poses issues of a degree of difficulty and complexity such as the United States has seldom had to face in its foreign

relations. Whether the cold war will last for 2 years or 20, no one can foretell. Whether Soviet pressure against Western Europe will next take the form of military attack, diplomatic offensive designed to split the western alliance, or fifth-column subversion based on internal political and economic weakness is equally uncertain. Confronted by these crucial imponderables, our task becomes nothing less than that of organizing a program of mutual defense which we and our allies can sustain indefinitely, and which is capable of deterring or repelling a Soviet thrust in whatever arena the Soviets may choose. By demonstrating to the Russians the futility of further efforts to bring Western Europe under Soviet control, we would hope thereby to lay the basis for a durable negotiated settlement with the Soviet Union. This task will challenge to the limit the stability, the wisdom, and the skill of our foreign policy, and thereby the moral resources and the basic maturity of the American people.

Our participation in the European security program must be sustained and unwavering. The rearmament effort of the continental countries will be weakened by timidity and hesitancy so long as they doubt the steadfastness of purpose of the United States, and fear that some future reversal of United States policy may leave them to face the Red army alone across a few hundred miles of German plain. To dispel this fear, our every official act and utterance should reflect our determination to share in the defense of Western Europe until the Soviet threat to the freedom of that region is abated.

The common goal in Western Europe must be seen as balanced security—not as rearmament alone. Our strategy in Western Europe will be dangerously defective unless it is squarely based on the recognition that the Soviet threat is not just military aggression, or diplomatic maneuver, or internal subversion, but any of these alone or in combination. Consequently, the security of Western Europe requires that her defenses be strengthened against all the weapons of Soviet imperialism. The pursuit of this objective will necessitate continual compromise between greater armed strength on the one hand and economic well-being and advancement on the other. Decisions will have to be made day by day as to whether the cause of European security would be strengthened by the establishment, for example, of another infantry division at the cost of a further reduction in industrial investment. Such questions cannot be answered conclusively, and they may be answered wrong. But it is a matter of the highest importance that such questions be asked, and that the direction of the rearmament program be so organized as to assure that they will be asked; for the security of Western Europe must be understood as resting upon the condition of life of the people of that region, on their hope for a better future, and on the social and political unity of their countries—as well as on their armed might.

STATEMENT ON BEHALF OF THE CONGRESS OF INDUSTRIAL ORGANIZATIONS, SUBMITTED BY NATHAN E. COWAN, DIRECTOR, CIO LEGISLATIVE DEPARTMENT, IN SUPPORT OF ECONOMIC ASSISTANCE TO THE STATE OF ISRAEL

The Congress of Industrial Organizations fully supports H. R. 3458, introduced by Mr. McCormack, of Massachusetts, and H. R. 3488, introduced by Mr. Martin, of Massachusetts, authorizing economic assistance to the State of Israel. We hold it of prime importance to give financial aid to this new democracy as part of our program to strengthen the free world against Communist aggression.

We, who are not military experts, would write into this record our conviction that Israel can play a formidable and impressive part in democracy's defense. That conviction is based on an intimate knowledge of the social and spiritual forces which have given life to this new modern state. Here, in a derelict, barren, and feudal part of the world, there has emerged a real democracy, cherishing the ideals to whose defense we are dedicated, preserving them and endowing them with vitality by seeking to express and realize them in their daily life.

We have a profound appreciation of the fact that the young State of Israel has arisen on foundations firmly laid by free labor. This is the one state in the Near East in which workmen have developed the very same institutions which we in America hold so dear. It is the one state in the Near East where the idea of freedom is transcendent, arising above all other considerations. This, we as Americans know and understand and that is why Israel is a reality so readily understood and appreciated by American eyes.

I have spoken in general terms. I will be specific.

In Israel, the general federation of labor is known as the Histadruth. It is older than the state and it has helped to fashion it. It was founded by 4,400 Palestine pioneers just 30 years ago. Theirs was not the task of organizing labor within the framework of an existing economy—they had to begin by creating the worker, teaching him a trade. They also had to create work for the worker. In those days, Palestine was a disease-ridden and barren wasteland and so the Histadruth had to assume also the responsibility for ministering to the health needs of the worker through its own medical organization.

Idealistically, the Histadruth was devoted to the purpose of building a Jewish homeland on democratic principles. At the same time, it was devoted to the

transformation of the people into productive workers. It had to raise living standards and it had, at the same time, to establish itself in industrial and agricultural enterprises to give jobs to all.

Today, Histadruth has a membership of 340,000 adult workers, representing 70 percent of the working population. Today Histadruth has become both the symbol and instrument of cooperation in the highest sense of the term.

I want to tell you more about this unusual labor movement. I know that this is not a committee concerned with labor and its problems. There is another committee for that purpose. You are concerned with our foreign policy and that is precisely why I want to enlarge on this discussion. For it seems to me if we are sincerely concerned to combat the rise of communism in the feudal areas of the world, we must think not solely in terms of guns and armaments, in negative propaganda. We must think of positive and workable systems of life which meet the daily needs of people and which give reality to their hopes and aspirations for the future. Here in Israel is a society where capital and labor cooperate in the common interest. It is the democratic system proving its independence, fulfilling its purpose. We believe that its steady advance and its consistent success will reflect great credit on the democratic way of life.

Histadruth, the federation of labor, is everywhere in Israel. I have spoken of its 340,000 adult membership.

Twenty percent of that membership is found in the 500 agricultural settlements of the country. Thus, there is the closest cooperation between settlers in agriculture and the workers in industry.

The Histadruth maintains 16 vocational schools and 15 farm schools in various parts of Israel—a number of these established with funds provided by the CIO. During the 1950-51 school year, the 1,100 Histadruth educational institutions conducted classes for 78,000 pupils, or 37 percent of the total. The Histadruth educational system includes kindergartens, elementary and high schools, night schools for working youth, and teachers' seminars. There are 3,482 teachers and 700 kindergartens in the Histadruth schools.

There is a real partnership in Israel between labor and management. Thus, a little over a year ago, the Histadruth took the initiative in setting up joint production boards—representing labor and management—as a means of increasing industrial output. This has proved of real benefit to the country as a whole. In all its activities the Histadruth has worked hand in hand with management. In fact, and this is one of its unique characteristics, Histadruth has gone in partnership with private capital in industries which have developed out of its primary building and agricultural interests. Quarries, brick factories, cement works, an iron foundry, and a glass factory, were acquired to insure a regular supply of building materials and equipment to Solel Boneh, the Histadruth Construction Co., which is the largest of its kind in the entire Near East.

You will ask whether Histadruth is concerned about the Arabs in Israel.

As far back as its 1923 convention, the Histadruth set forth as basic policy the principle that "creation of friendly relations with the Arab workers shall henceforth constitute one of the primary tasks of Jewish labor." This was 1 year after the Histadruth took the initiative of organizing the Palestine Labor League for Arab Workers, which today has a membership of some 35,000 Arabs. The total Arab population in Israel is 175,000 enjoying equal rights and privileges with their Jewish compatriots. This was a great step forward for the Arabs. Today, the Arab worker is an equal to his Jewish coworker in Israel. He benefits from the Histadruth which has set up a special Arab department within its framework. He receives treatment from the Histadruth Medical Organization. His trade-union rights are guaranteed, thus assuring him a decent living standard. He partakes in various cultural activities and profits from consumers' and marketing cooperatives.

Only in January of this year, an important step in the development of the Arab cooperative movement took place when representatives of 21 consumers' cooperatives—including 10 tobacco-growing cooperatives—from Arab villages in Galilee met to elect a coordinating council. The Histadruth had been active in these villages and saw in the organization of marketing cooperatives a key to raising living standards for Arabs and an opportunity for improving their agricultural methods. The Histadruth, therefore, began organizing local marketing cooperatives in the villages; these in turn to constitute a central cooperative which collects the produce for resale at its markets in the towns.

Consumers' cooperatives are also beginning to appear in Arab villages as a result of Histadruth encouragement, and the Histadruth hopes to use this medium for educational purposes by familiarizing the peasants with a range of goods,

such as kitchen and household implements, work tools, and a variety of seeds, which will be on sale there. The cooperatives get an initial loan, as well as help and guidance, from the financial instrument of the Histadruth's Arab department.

If I have given you these detailed facts and figures it is to emphasize that our friendship for Israel and its labor movement is based not alone on sentiment but on appreciation of attitude and achievement.

In 1949 a CIO delegation, chairmaned by President Jacob S. Potofsky, of the Amalgamated Clothing Workers of America, and including President Joseph Curran, of the National Maritime Union, and Maxwell Brandwell, acting as their adviser, visited Israel to make a detailed study of both labor and governmental progress in the new nation. On their return to the United States, they reported that there was no iron curtain in Israel. Rather, they found Israel to be "a giant goldfish bowl in which every occupant is eager to show his record and his plans."

The members of the CIO delegation voiced their complete satisfaction with the Histadruth and the Government of Israel as democratic champions in the Near East, and recommended support by the CIO of further substantial financial aid by the United States Government to the Republic of Israel. The delegation recommended also that the moral and financial support extended in the past by the CIO to the Histadruth "should be continued in even greater measure in the future."

There is no question as to where Israel's labor movement stands in the present world crisis. The Histadruth has withdrawn from the Communist-dominated World Federation of Trade-Unions, and on April 5, 1951, the Histadruth refused to receive a delegation from the World Federation of Trade-Unions, to discuss this question further. The CIO is confident that in the near future the Histadruth will be welcomed as a full-fledged member of the World Confederation of Free Trade-Unions, where it will have the opportunity of making its contribution to the democratic world labor movement.

The CIO and the Histadruth have maintained liaison with one another for many years to their mutual benefit. President Philip Murray himself has served and is serving now as an honorary chairman of the National Committee for Labor Israel—and the CIO has further demonstrated its keen interest in aid friendship with the workers of Israel by adopting resolutions on Israel and the Histadruth at its national conventions.

I have attached to this statement the complete text of the last resolution on Israel and the Histadruth which was adopted unanimously at the twelfth constitutional convention of the CIO in Chicago, Ill., in November 1950.

I have confined my statement to an analysis of Israel's labor movement and the affinity with our own. Others can testify more eloquently on the economic crises which Israel faces because of its immigration program. But I would add these observations on this dramatic migration which surely must excite our admiration. Since the rise of totalitarianism in Europe and Asia, nazism in Germany, and communism in Russia, a host of men and women who believed in free labor and fought for its rights were crushed and destroyed. A few somehow survived. Many of these have found refuge in Israel, the one country in the world which maintains an open-door immigration policy. By far, the greatest number of Israel's immigrants, and surely all who have come from Europe, are refugees from nazism and communism. The concentration of this force of freedom's advocates in Israel make this little country one of the strongest democratic oases in its part of the world.

Israel is the pilot plant of the Near East. Its democratic ideas must inevitably affect her neighbors, for ideas can surmount boundary lines and overcome boycotts and blockades.

American aid to Israel is crucial to Israel's stability. If we can help this little country to become strong, it can become the eloquent advocate and the stout defender of all that we as Americans hold dear. A grant-in-aid by this Congress to Israel for \$150,000,000 will do much to make Israel an impregnable fortress for democracy in the Near East. It is eager to assume that role. We Americans must help it do it.

CIO RESOLUTION—ISRAEL AND HISTADRUTH

The young State of Israel in the third year of its existence is engaged in the historic task of providing a free and secure home for hundreds of thousands of uprooted and oppressed Jews from many lands throughout the world, having received nearly half a million immigrants during this brief period and holding

its gates wide open for even larger numbers to enter during the next few years.

The State of Israel has succeeded in converting these helpless and homeless human beings into a productive, dignified, and free community imbued with the ideals of democracy and social justice.

The democratically elected government of the State of Israel has ably demonstrated its capacity to serve the new nation and concern itself with the welfare of all its citizens, Jews and Arabs alike, promoting universal education, freedom of worship, freedom of the press and respect for individual rights.

The State of Israel has fulfilled its obligations of membership in the United Nations and has demonstrated its sense of responsibility to world peace by supporting the United Nations resolution condemning the act of aggression in Korea and has offered from its limited resources to aid the United Nations in restoring peace in Korea in keeping with the purposes and aims of the United Nations.

The Histadrut, the Israel labor movement, plays a prominent part in the life of the country and has been largely responsible for incorporating into its laws and customs many progressive labor principles that protect the working conditions, living standards and human values of the working population which constitutes the overwhelming majority of the entire population of the country.

This Histadrut, through its cooperative institutions serves the health needs of 600,000 Israeli; fosters educational and cultural activities; provides vocational training for youth and adults; erects cooperative housing projects for workers at low cost; and safeguards the democratic fabric of the State of Israel in every possible manner.

The State of Israel is still burdened with the great responsibility of absorbing hundreds of thousands of homeless people each year and is further hampered by a huge defense budget due to the failure of the neighboring Arab States to conclude a permanent peace treaty with Israel as has been sought by the State of Israel, the United Nations, and the United States.

The Congress of Industrial Organizations has consistently expressed deep interest in the entire dramatic and rewarding struggle of the Jewish people to establish their national home, and has extended invaluable moral, financial, and political aid for the attainment of this goal.

President Philip Murray, on January 10, 1950, in joint and close cooperation with President William Green of the American Federation of Labor, called upon President Harry S. Truman and expressed the abhorrence of the American labor movement that the Arab States of the Middle East were being rearmed with weapons for aggressive warfare by Great Britain, and that this excessive rearmament constituted a grave and direct threat to the democratic State of Israel; and urged that our Government act to halt this shameful and dangerous arms race.

The Congress of Industrial Organizations has extended moral and financial aid to the General Federation of Jewish Workers in Israel, Histadrut, thus aiding it in its promotion of a bona fide trade union movement that is vital not only for the welfare of the state of Israel but for all the nations of the Middle East, where labor is notoriously exploited and unorganized; Now, therefore, be it

Resolved, This convention extends its heartiest greetings to the democratic state of Israel upon its splendid progress despite adversity, and pledges its continued moral and material support so that Israel may enjoy uninterrupted growth, lasting peace, and international fellowship.

The CIO convention takes cognizance of the decisions of the second American Trade Union Conference for Labor Israel, held in Washington, D. C., on June 16-18, 1950, to mobilize the fullest moral and material support of American labor on behalf of the constructive program of Histadrut in Israel, primarily the absorption of immigrants, maintenance of vocational schools, medical services, educational institutions, industrial and agricultural cooperatives, trade union organization, and similar activities which mold the democratic character of the state of Israel.

The convention endorses the efforts of the American Trade Union Council of the National Committee for Labor Israel to raise through voluntary means the sum of \$2,000,000 among the American trade unions for the above-mentioned constructive purposes of Histadrut during the year 1950-51.

THE MUTUAL SECURITY PROGRAM

SATURDAY, JULY 28, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the House Foreign Affairs Committee room, the Capitol, at 10 a. m., Hon. James P. Richards (chairman) presiding. Chairman RICHARDS. The committee will come to order, please.

Ladies and gentlemen, we will continue hearings on the mutual security proposal. We are privileged to have with us this morning Ambassador Charles M. Spofford, United States Deputy to the North Atlantic Council, NATO operations in Europe; Gen. A. Franklin Kibler, Director, Joint American Military Advisory Group for Europe; the Honorable Milton Katz, ECA Special Representative for Europe; and Hon. William L. Batt, United States member, Defense Production Board for European Production.

Gentlemen, we are mighty glad to have you here with us this morning. The committee that went to Europe was very much impressed with your spirit of cooperation and your knowledge of your job. It is mighty good of you to be here to let some of the other members of the committee, who could not go to Europe at the time on the special committee, receive the benefit of your advice and experience.

Mr. Coolidge, I expect the best way to proceed would be to follow the team system here, and let each one make a statement. I want to tell you gentlemen that we are a little punch-drunk about long written statements. We want your statements to be in the record no matter how long they are, but if you can abbreviate them and just cover the main points, we will appreciate it.

Mr. Coolidge. I think, Mr. Chairman, you will cover ground if you will follow that procedure.

Chairman RICHARDS. That is in no way to minimize what you will want to tell us. I do not mean that at all. You can see what I am driving at. We will hear first from Ambassador Charles M. Spofford.

STATEMENT OF HON. CHARLES M. SPOFFORD, UNITED STATES DEPUTY TO NORTH ATLANTIC COUNCIL FOR NATO OPERATIONS IN EUROPE

Ambassador SPOFFORD. Thank you, Mr. Chairman. Following your suggestion, and Mr. Coolidge's, I think we would like not to read the prepared statements, but talk briefly and informally from them.

We would like to follow the team procedure which we did when we met with you in Paris. We shall attempt to make our opening

presentations brief, as a basis for answering your questions and discussing the problem with the committee.

We constitute, as a team, the European coordinating committee. The four of us here—General Kibler, representing General Handy—meet as a committee periodically in Europe, our objective being to make sure we are all pulling together as an effective team to accomplish United States objectives in Europe, primarily through the international organizations on which we represent the United States.

In addition to our regular formal meetings, we have a staff which is in constant contact. We emphasize in our day-to-day work the team concept as the only effective means of accomplishing United States objectives.

The previous witnesses which have been before you in your long hearings have testified to the fundamentals of the United States policy which underlie the defense effort. I think it is unnecessary for us to cover that ground. I think we all agree, and completely affirm, that the defense of Europe is inextricably linked with and is essential to the security of the United States; and, also, the building, through the Treaty Organization, the North Atlantic Treaty, of a shield against external aggression is necessary and a logical extension of the shield against internal aggression which was created through the European recovery program.

I think we can usefully help your committee if we give you our estimate of the situation, such facts as you wish to bring out through our testimony, and answer your questions.

I should like first to say a very brief word about the Treaty Organization itself. You have had the details; you have had the chart; you are familiar with the structure.

I want to make just two comments on our organizational problem overseas. One is to stress a fact which may be obvious, but which I think is not fully understood, that is the actual function of the Treaty Organization.

This is an international organization, the end result of whose activities is not merely international agreement, not merely a solution, but carrying international decisions into effect. There is an executive function to be performed.

The Treaty Organization is not merely to get agreement that there will be forces on the ground, production programs, but it has to see that the plans are translated into action. That I emphasize because that is at the core of the organizational problem which we have had over the past year since the Treaty Organization has begun to take definitive shape, and is still an important problem for us.

During the past year the Treaty Organization, primarily because of the fact that I have called attention to, has evolved in the direction of a more effective international executive mechanism.

We have simplified and reduced the number of agencies that existed a year ago now. We have centralized the authority where it has been possible and practical to do so, the outstanding example, of course, on the military side of SHAPE, the appointment of the coordinator, the head of the Defense Production Board.

We have replaced to the extent that it has been possible to do so occasional committees with which the Treaty Organization was largely staffed a year ago with a permanent organization supported by international staffs.

I think the evolution in that direction must continue, that we must increasingly see a more effective executive form of organization to perform this follow-up function, the executive function, which is at the heart of the Treaty Organization problem.

These agencies, of which I have just spoken, I think you must bear in mind have been on the ground for a relatively short time; the council of deputies, for which I am the United States representative, for 11 months, the Defense Production Board for about 6 months, SHAPE for 5 months, and the Finance and Economic Board for 2 months.

I am not prepared to say, and I do not say, that the organization, the international organization, overseas is final, or in its most effective form. But I think I can say that we now have agencies which are equipped to deal with the main elements of the problem and are staffed, operating, and I think becoming more effective.

That is all I should care to say at this time, Mr. Chairman, on organization. I think you will probably wish to return to this subject when we come to the questions.

Ambassador STORFORD. I should like to say a few words on my estimate of the situation, and try to give your committee a general idea of progress in Europe today.

I will treat the subject mainly from the political standpoint; Ambassador Katz will deal with the economic questions; Mr. Batt, with production problems; and General Kibler, with the military assistance program.

Those of you who met with us and met with General Eisenhower I am sure recall his very forceful statement, which I think represents the views of all of us overseas, that the central problem, the problem which underlies the entire North Atlantic Treaty operation, is the development of determination and confidence in the Europeans, the development of confidence in their ability to defend themselves.

General Eisenhower has said to you, and he says it to everyone that he meets with, that no one can defend Europe but the Europeans. I think we wholeheartedly concur with that statement.

The importance of this problem is, I think, recognized by the frequency with which we are asked the question, Will the Europeans fight? The question of whether the morale, determination, and confidence which can effectively defend Western Europe is now in existence.

That, of course, is the test of their ultimate ability to defend themselves.

But we have to look for, and we have to apply daily, more immediate tests, not the question of whether they will fight, but will they take action now, this month, next month, action necessary to put themselves in a position so they may not have to fight; in other words, action to accept higher taxes, longer periods of service, civilian controls, and the various steps which must be taken to create an effective defensive structure.

These steps depend on the same factors, a combination of determination and confidence.

They are basically, as I think you gentlemen who were in Europe realize, problems the solutions of which require political decisions, parliamentary backing and public opinion.

I well appreciate that you had a great many general statements, a great many generalities, and I do not want to deal in this altogether in general terms. But I would like to suggest an answer to this political question which will be somewhat general in its nature.

I should like to suggest that we consider that the public opinion in Europe since the war has been composed of three main elements: those who were with us in any event, those who were against us in any event, that is, the hard core of communism, and those who are in between.

We have devoted a great deal of attention to the Communist problem, and rightly so, because the Communist problem is the toughest problem, and it is the one which must be solved in the long run if Europe is to have real security.

It is a problem in which great progress has been made since 1947, and in which great progress has been made last year, despite the votes in France and Italy recently, with which you are familiar, which showed a continuing popular vote for the Communist Party in these two key countries.

I think we feel there has been a definite decline in the influence of the Communist element in the past year, shown by the fact that they now are not represented in any government in the North Atlantic Treaty governments. They have less control over the labor unions. Some of their leaders have defected. Some of their political strikes have failed. They have proved themselves unable to obstruct our military end-item deliveries.

I think we agree their influence is diminishing. However, there is still a hard core, and I think we have to face the fact that over the critical years there will be a Communist problem, particularly important in France and in Italy.

Now, the middle element which I referred to, I think we have devoted too little attention to. Like the independent vote in a great many districts, we think it may be decisive. I am not talking about this middle element in the way of political or parliamentary alignments, but the large group of those who after the war and up to recently have been undecided, uninformed, misinformed, tired, apathetic, who believe that the United States may have aggressive intentions, and many of those who saw no alternative to a submission to the Soviet if it should choose to move.

I think there has been a definite and a substantial change in the political situation in Europe during the past year. I think public opinion is firming up behind the parliaments, behind the governments, in support of the defense effort.

I think it does come about due to the increasing confidence and to the shift of this undecided middle element to our side. That is just a judgment. I think that represents the judgment of most, if not all, of those of us who are working overseas. But we do not have to rely entirely on personal judgment. Let me give a few examples, a few cases which I think tend to support this conclusion.

You are familiar with the fact, and I do not want to go into the details, that over the past year we have had legislative action in two politically sensitive fields, that is, national service legislation and defense budgets.

Each country except Portugal has extended its periods of national service and otherwise strengthened its service laws. They are still

not adequate in many countries. They are adequate in some, and in an increasing number. I think that fact tends to show an increasing determination to support the defense effort in that sensitive field.

Budgets are up approximately 75 percent over pre-Korea. The trend is up everywhere. It is steeper in some countries than in others, as you know. It is not the maximum possible; approaches it in some cases; and does not approach it in others.

There again during the past year I think we feel we can see evidence, borne out by applying that test, of increasing confidence and support for the defense effort.

I could mention other things that do not involve legislation. We have had in several countries more courageous and effective efforts to curb the Communists, in Belgium, in France and Italy, acts which I think the governments would not have taken a year ago, but which they now feel politically in a position to take.

We have had extension of civilian controls, measures for allocations of materials in a number of countries, notably the Netherlands, Norway, the United Kingdom; effective in some and less effective in others.

This action of the sort I have referred to has been taken not without some political difficulty in several countries. As you know, the Netherlands was without a government for 7 weeks.

(Discussion off the record.)

Ambassador SPOFFORD. After the political alinement, after this period of political crisis, the Netherlands came up with a 60 percent increased budget, a program which involved a 5-percent cut in real wages, a decrease in its investment program, and a substantially stepped-up support of the Netherlands' defense effort.

Take the United Kingdom. The real issue behind the Bevan resignation, as I think you realize, was the attitude toward the accelerated and increased British defense program. That was fought out within the Labor Party. I think it is significant that the Labor government, under attack from its left wing, stood firm on its program, which is a substantial program, and the Government is still in power.

We have had an Italian crisis, two Italian crises. I do not want to go into the details, but I think I can say, and I think it is important, after each cabinet crisis, around the circuit during the year there has been firmer Government positions in defense of the defense effort.

One word as to neutralism, which we used to hear a good deal about. We hear a great deal less about neutralism this year that we did a year ago.

No neutralist candidate was elected in the French elections. Let me mention the Danish elections. The party which was running on an NAT essentially neutralist platform was decisively defeated.

Let me say that I think the reasons for this firming up of public opinion in Europe behind the defense effort are probably three: First, success in Korea has had a great deal to do with it; but second, and most important, the appointment of General Eisenhower and General Eisenhower's leadership, and third, the increasing deliveries of United States equipment under the Military Assistance Program.

On the effect of General Eisenhower's appointment, I should like to suggest an analogy to the effect of the North African landings on the French resistance movement in 1942. Prior to 1942, I think most

of you will recall, some of you may as I have had personal experience with this, you had a limited spirit of resistance, a limited resistance movement in France. The reason was that no alternative was apparent. The French were defeated and were resigned to their defeat.

After the landings, the resistance movement grew and at the end produced some of the finest fighting that the war saw.

I think on a broader scale the creation of SHAPE, General Eisenhower's army, and his appointment, has had that effect on European opinion as a whole. An alternative is now in sight, a successful defense now seems possible.

One word, if I may, as to the effect of the delivery of United States equipment. That has had, of course, the effect of creating new units. The outward and sizable signs of strength are very important to the Europeans. The Europeans are equipment conscious. They think the German equipment defeated them; they think our equipment defeated the Germans.

So, as they see the new and modern weapons, they realize that the American productive genius and power is now operating again in defense. I think that fact has had, in addition to the physical fact of increasing the forces on the ground, a considerable effect, a most important effect, on the morale of the Europeans.

Against these positive factors, which I think are operating in our favor, we have to recognize there is the other side of the coin.

The deterrents to faster and more decisive action in the political field in support of the defense effort I think are three: First, we have to recognize there is a very deep-seated fear of inflation, due to the rise in prices during the past year, rise in cost of living in most European countries, substantial in some and worse in terms of trade. We may have talked too much about defense burdens and not enough about defense contributions.

In connection with this fear of inflation, there is a common denominator that all Europeans now have, that every European country has seen its currency destroyed in the memory of the present generation. So that is a practical matter and not an economic theory.

I think the major deterrent to faster and more effective action is the fear that the upward trend of military expenditures, taxes, controls represent a permanent state of affairs, continuing austerity.

We have been emphasizing to the government leaders that we are now in a phase—this, of course, applies to the United States as well as it does to Europe, but I am now speaking of the European situation—of the capital build-up of our own defense machine, our defense establishments, our capital in defense equipment, which was disbursed or dissipated after the war. We are now re-creating it, and we may have to think in terms of capital levy until we reach that security point where our capital is established in terms of production, man-hours of training, and thereafter the curve will descend and level out, and the burden will be in terms of maintenance rather than capital charges, current rather than capital expense.

The third problem with which we have to deal, and which is one which I think you who are members of the team that went abroad recognize, is the fact that our parliamentary situation is very evenly balanced. We have precarious governments in most of the countries with which we have to deal. That means that domestic politics com-

plicate the situation. Domestic issues affect legislation and government action on the defense matters there, as everywhere.

I would like to mention as an example, on the issue of appointing an American admiral to the supreme command, the Conservative Party voted against, although the Conservative Party has been most generally sympathetic to the United States view.

Another example of delay was brought about in the French situation. I think we have strong individual leaders, and generally in many, if not most, countries I think most of them are ahead of their parliaments and can be counted upon to help their governments and peoples to understand the realities of the present situation.

I would like to conclude this very general summation, as I see it, of the political situation in Europe, general and probably oversimplified, in this way: First, I believe there has been a definite and substantial uptrend in morale, confidence, during the past year, most notable during the past few months.

I think there has been a definite increase in military strength, which the military witnesses have testified to, and will confirm later today and next week, measured in terms of men in uniform, military production, although the improved support of public opinion, the legislation that has gone on the books recently, is not fully reflected in these respects.

The over-all picture, of course, is not uniformly good. It is uneven between countries; it is uneven within countries as to different elements of the defense program; it is encouraging and dramatic in some and disappointing in others.

The defense upward trend we think represents a creditable and definite effort by our NAT partners.

A final word as to the place of the United States aid program in this picture. The previous witnesses have all emphasized, and I just wish to urge in conclusion, without elaborating on the point, that an essential element to the completion of the North Atlantic Treaty plan for a defense of the west is continuing United States support, in terms of both military and economic aid.

They are both necessary to the achievement of an effective posture in Europe in time, and time is the factor which we must keep very much in mind.

On the military side, as you know, the military program is designed to supply deficiencies of the force that will come into being. It is geared to military plans. The failure to provide the heavy hardware means fewer units for General Eisenhower or units that are formed behind schedule, again with loss of time, a very vital factor.

A word as to the economic side, which the others will enlarge on. It is marginal and it is supplementary to the effort of our NAT partners, to be used only in support of the defense programs and to serve as a cushion against inflation.

That is important because the transition from the ERP to the NAT phase of building up European strength must be gradual. There must be no sharp break. There is no profit in building a wall against external aggression and permitting collapse within via the Communist subversion, which we have called internal aggression.

Of possibly the greatest importance to the enactment of the present aid program is the positive evidence that will be given to our Euro-

pean partners of the continuity of the policy of the United States in support of a North Atlantic Treaty.

As you all know, the United States leadership is the major factor in directing this entire effort. Continuity and consistency are essential.

I think, Mr. Chairman, in conclusion of these informal remarks I wish to say that this program is essential and offers the best hope, not only for the security of the United States, but the preservation of freedom in the free world.

Chairman RICHARDS. Thank you very much, sir. We will go along with the statements and then we will ask questions from the different ones.

Our next witness on the list is Gen. A. Franklin Kibler, Director, Joint American Military Advisory Group for Europe. General Kibler.

STATEMENT OF GEN. A. FRANKLIN KIBLER, DIRECTOR, JOINT AMERICAN MILITARY ADVISORY GROUP FOR EUROPE

General KIBLER. Thank you, Mr. Chairman.

Chairman RICHARDS. General, I do not know whether you would prefer to make a statement or subject yourself first to questions on the European military situation or not. We will do whichever you prefer.

General KIBLER. I am prepared to make a brief statement, Mr. Chairman. I will say that, as the Director of the Joint Military Advisory Group in Europe, I am directly responsible to General Handy, who is the senior United States military representative for the Mutual Defense Assistance Program overseas in Europe. It is in his place that I have the honor to appear this morning.

There has been furnished for your record a report by General Handy. I am going to follow generally the outline of that report in my remarks.

Chairman RICHARDS. Do you request that General Handy's statement also be made a part of the record?

General KIBLER. Yes. It has already been submitted.

Chairman RICHARDS. It will be included in the record. Do you have copies?

Mr. CRAWFORD. I have copies. I will see it goes in the record.

(The statement referred to is as follows:)

REPORT BY GEN. THOMAS T. HANDY, COMMANDER IN CHIEF, EUROPE, TO THE UNITED STATES CONGRESS ON MILITARY ACTIVITIES IN EUROPE

This is a brief report on the military activities of our European partners in the North Atlantic Treaty during the past year. My observations are based upon information acquired during visits I have made (in my capacity as the United States Military Representative for Mutual Defense Assistance in Europe) during that period to all the European North Atlantic Treaty countries except Portugal; through my activities as the representative of the Joint Chiefs of Staff in the Western European Regional Planning Group of the North Atlantic Treaty Organization; as the military member of the European Coordinating Committee; and from periodic reports made to me by the Joint American Military Advisory Group, Europe. This last-named organization is the United States Joint Staff located in London that has had the day-to-day responsibility for representing the United States in defense planning and for the military aspects of the implementation of the military-aid program in Europe.

Measured only in terms of additional manpower in the armed services or in new combat units formed and ready for use, progress during the past year has been small. It must be remembered, however, that most of our European allies had a very poor foundation upon which to build. With the exception of the United Kingdom and Portugal, their military services were wrecked during World War II and their equipment completely destroyed. Portugal, with no recent military history, has an antiquated military establishment and the United Kingdom had, like all democracies in the postwar periods, allowed her military establishment to run down.

In the period between World War II and the advent of Communist aggression in Korea, all the Western European countries had been engaged primarily in rebuilding their civilian economy and attempting to restore the stability of their political structures. The military services were forced to begin their rebuilding with odds and ends of equipment left over from the German surrender, acquired from the United States or the United Kingdom at the close of the war or from various other sources.

A problem of equal importance was that of personnel. Following the surrender of the European armies early in the war, no new officers, noncommissioned officers, or technicians were trained. These, as you know, are the backbone of any efficient military organization; the instructors of recruits, the maintainers of equipment, and the basic combat leaders in battle.

Schools and training centers reestablished since the war had not turned these specialists out in adequate numbers. In a number of cases the capacity of these installations is still inadequate. Senior officers presented less of a problem, but even here lack of experience has made more difficult the task of reestablishing efficient service staffs and ministries.

During the past year, however, and especially since the outbreak of war in Korea, all countries have been actively engaged in laying the ground work that is necessary to the effective development of a sound military posture. Service schools are being expanded and training centers reorganized to make more effective use of available facilities. More modern methods of instruction and training are being employed. A substantial number of instructor-type personnel and technicians have been trained in United States schools and installations and returned to their own countries as instructors. Terms of military service have been lengthened. Military services are being reorganized to produce combat units that will fit more readily into an integrated allied army. Not all countries have done all of these things for change is not easily effected in countries of strong traditions, but very real progress has been made.

The things I have just mentioned are matters which each country must deal with individually. There are many other matters in the collective-planning field, however, in which progress has also been made. Understandings have been reached in a number of matters pertaining to the relinquishment of national sovereignty in time of war—an extremely sensitive matter and one representing material concessions on the part of several countries. Agreements have been reached on standardized procedures in many areas of military endeavor which will assist in the effective collaboration of allied units in war. This type of endeavor is an essential prelude to the development of an integrated force under an allied supreme commander.

Progress has also been made in drafting defense plans. It remains for the Supreme Headquarters Allied Powers in Europe to refine these plans for the most effective operational use, but they have served the very real purpose of defining the magnitude of the task ahead of us and of eliciting commitments from nations for raising the major portion of the forces which this planning has shown to be required for a successful defense of Western Europe. The raising, equipping, and training of these forces is obviously the major task confronting us. My views on the progress so far made by each country in meeting its military commitments, as well as my estimate of the likelihood of their reaching them by 1954, I shall discuss separately because of the security aspects of my remarks. (See annex A attached.)

The judgments expressed as to the ability of countries (the United Kingdom excepted) to achieve their NATO force commitments is based upon their ability to raise, organize, train, and partially equip the forces represented by their commitments. With maximum use of the present capacity to produce military end items in Western Europe, it is clearly not possible within the time required to equip adequately the forces to be raised by Western Europe. This is the basic reason why it is necessary to make available United States end item and economic aid.

The mutual defense assistance program has contributed materially to the success which the European countries have had in having the ground work for greater defense progress in the future and can be expected to have an increasingly strong effect as deliveries of military equipment speed up. I have mentioned the fact that a substantial number of instructors and technicians have been trained in United States installations. These instructors, having returned home to their own training centers, are having marked success in improving the quality of training in every country. This improved training and the increasingly large flow of new equipment have been basic factors in the improvement of the morale of the European armed forces that is apparent to all observers. Furthermore, the mutual defense assistance program is positive proof to the Europeans that the United States is wholeheartedly behind the NATO defense effort. This stimulus is needed by the European countries in order to completely erase the apathy with which they have heretofore been plagued and encourage them to increase their own efforts toward raising forces and manufacturing munitions.

Our representatives in each of the European countries are giving valuable assistance to insure that the equipment being furnished is properly used. These efforts are even now being augmented by General Eisenhower and his staff who are charged with seeing that national forces are organized and trained in such a manner that they can be integrated into an effective Allied Army. I am confident that, given time, this goal can be reached and United States security very greatly augmented thereby.

One final thought: We can neither maintain our way of life nor indefinitely insure the security of the United States without the full assistance of the NATO countries. It is imperative, then, that we hold our allies in Western Europe—the manpower and industrial capacity that enables us to maintain a favorable potential balance of strength. As I have indicated, our European allies are incapable, in the time considered to be available, of raising and equipping, unaided, the forces needed for a successful defense of this key area. Only the United States can provide this needed assistance. It is my considered opinion, therefore, that mutual defense assistance to our European allies is our only acceptable alternative and must be continued.

General KIBLER. General Handy is responsible for the military activities of the Mutual Defense Assistance Program. I am going to talk about the military activities of our North Atlantic Treaty partners, and the impact of the Mutual Defense Assistance Program on improving their military posture.

My organization, which we call JAMAG, is the staff for General Handy in executing his mission of the general responsibility to the Secretary of Defense and Joint Chiefs of Staff for the Military Assistance Program in Europe. We work very closely with the other regional agencies and coordinate the military part of the program with the Office of the United States Deputy Ambassador Spofford, for political aspects, the Office of the Special Representative for Economic Cooperation Administration, Ambassador Katz, for the economic aspects, and the Office of the United States Representative of Defense Production Board, Mr. Batt, for matters relating to European production.

At the country level, there is a country team of which the Military Assistance Advisory Group, which we call MAAG, also a joint Army, Navy, and Air Force organization, carries out the military portion of the program, under the operational and policy control of JAMAG.

This group is responsible for the programming of end items and training, requisitioning, receiving, and turning over equipment, together with its subsequent inspection to insure proper utilization. At both the country and the European level, the military organization works in close coordination with their State Department and Economic Cooperation Administration counterparts.

We recognize that the closest integration must exist between the United States agencies responsible for the Mutual Defense Assist-

ance Program and the Supreme Headquarters Allied Powers in Europe, SHAPE. General Eisenhower, however, does not desire to affect his international status by assuming responsibility for what is strictly a United States program.

Moreover, it is recognized that a tendency might develop for international members of his staff to attempt to participate in allocating the equipment provided by the United States Mutual Defense Assistance Program.

A close-working channel, therefore, has been developed between the Joint American Military Advisory Group and the United States element of SHAPE to insure that end-item and training programs are developed on a United States-eyes-only basis but thoroughly in consonance with SHAPE's force requirements, General Eisenhower's plans for their employment and his views as regards interservice and intercountry priorities.

In considering the present status of the North Atlantic Treaty Organization nations, it must be remembered that most of our European allies suffered seriously during World War II in losses of manpower, resources, and productive means.

Moreover, with the exception of the United Kingdom and Portugal, their military services were wrecked and their military equipment largely destroyed.

Our allies, therefore, had a very poor foundation upon which to rebuild their military forces. They were forced to begin their rebuilding with odds and ends of equipment which were salvaged after the German surrender, or were acquired subsequently from the United States, the United Kingdom, or various other sources.

Following the surrender of the European armies early in the war, no new officers and noncommissioned officers were trained. These, as you know, are the backbone of any efficient military organization: The instructors of recruits, the maintainers of equipment, and the basic combat leaders in battle.

Given sufficient time and the will, our allies could achieve a measure of military stability with a minimum of assistance. However, with increased evidence of Soviet aggressiveness, time has become the essential consideration.

Our North Atlantic Treaty Organization partners cannot achieve the goals, called for by the European defense plan, unless they are given substantial United States assistance in the form of United States end-item equipment, training assistance, production know-how, raw materials, and the many other things which a modern army requires and which are essential to the successful waging of modern war, together with whatever economic help is required to support the basic economy upon which the military efforts rest.

Now, what has been the impact of the Mutual Defense Assistance Program upon the European military picture?

The Mutual Defense Assistance Program is positive proof to the Europeans that the United States is wholeheartedly behind the North Atlantic Treaty Organization defense effort; and this moral and physical backing has gone a long way to erase the apathy with which they have heretofore been plagued and it is encouraging them to increase their own efforts toward raising forces and manufacturing munitions.

Some specific fields in which their efforts have been stimulated by the Mutual Defense Assistance Program are:

Service schools are being expanded and training centers reorganized to make more effective use of available facilities;

More modern methods of instruction and training are being employed;

Approximately 10,000 instructor-type personnel and technicians have been trained in the United States schools and installations, and returned to their own countries as instructors——

Mr. VORYS. Just a second. Would the chairman yield to me for a moment? We have been here for an hour and we have heard merely a repetition of general stuff, a lot of which we got in the background documents some months ago, about organizations, etc.

I wonder if these gentlemen have been at all briefed on what we have heard and what the time element is with us.

I am inquiring, because if it is proposed to spend the next hour in repetition of stuff we have already heard a dozen times, I would like to go to my office.

Chairman RICHARDS. Well, the idea was that these gentlemen would put their statements in the record and subject themselves to questioning, because our time is rather limited. We are trying to finish all testimony Tuesday.

You see, we have come down to the point where we want to ask questions. We have heard the general policy over and over again. We have been running three sessions a day for 2 or 3 weeks. We are just going over old ground now.

If you gentlemen want to do that, we will hear you, but these members here really want to get down to the bone of contention in these things.

I do not know that you have been briefed on that or that anybody has told you what we have heard before this committee.

Has the clerk or anybody told these gentlemen what we want? Where is Mr. Coolidge?

Mr. CRAWFORD. The chairman is asking if these gentlemen have been briefed on the testimony previously given the committee.

Mr. COOLIDGE. Yes, they have, Mr. Chairman. The thought was that from their point of view you would like to know the general situation there, but it was not expected it would take much time. Their point of view is a different one than exists in Washington.

Chairman RICHARDS. We will not get a chance to ask any questions. This is just a morning session.

Ambassador KATZ. May I make a suggestion? Why not go on to the questioning. I am sure that is satisfactory.

Mr. CHIPERFIELD. Is this the only day that you are going to be before us?

Mr. VORYS. It is the only day planned, is it not?

Chairman RICHARDS. If we do not get the answers we want to all of the questions, you gentlemen will have to come back.

Mr. COOLIDGE. When they were briefed, I think there was a considerably longer time on the schedule.

Chairman RICHARDS. If there is anything we want, we will extend the time. I agree with Mr. Chipperfield and Mr. Vorys. We are really going to be wasting a lot of time here for a matter that is going in the record anyway.

We can read that any time.

Mr. COOLIDGE. I am sure, Mr. Chairman, you will get no objection from the witnesses if you go right to questioning.

Ambassador KATZ. If it represents the preference of everyone in this room, why not do it?

Mr. MANSFIELD. May I suggest then that Mr. Batt join the rest of the team, and they all file their statements for the record so we can study them, and start with the questioning.

Chairman RICHARDS. I think that is a good idea. Mr. Batt, will you come forward? All of these statements will be filed for the record if there is no objection.

(The statements referred to are as follows:)

STATEMENT OF AMBASSADOR MILTON KATZ, UNITED STATES SPECIAL REPRESENTATIVE
IN EUROPE, ECA

INTRODUCTORY STATEMENT

On the basis of 8 years of work and observation in Europe, it is my judgment that the Mutual Security Program, now before the Congress, is soundly designed to meet critical United States needs in Europe. Its justification rests upon three central propositions:

That, realistically seen and understood, Europe is a battleground whose security is critically important to the security of the United States.

That, during the past 3 years, the United States and its allies have been winning in the struggle under way—but far from won—in Europe.

That the Mutual Security Program is needed to bring into being the means essential to consolidate the positions already won and to extend our gains to the point where the security and peace of the United States and the Atlantic community can be firmly established.

I. THE SETTING

Europe has been under attack by the Soviet Union and its agencies and instruments since 1945. The attack has been both internal and external. The many-sided internal offensive has included political penetration and the attempt to disrupt parliamentary processes through the Communist Party and Communist-front organizations; the penetration and capture of labor unions; economic dislocation through political strikes and sabotage; and a vast propaganda apparatus. The external aggression has included the systematic exploitation of the fear of war, in which a primary instrument has been the shadow of the Red army; the cutting off of exports, as in the case of manganese; actual blockade in Berlin; and the fomenting and support of guerrilla warfare in Greece.

This offensive was aided by the economic distress and dislocation following the war.

Until 1947, the defense was limited and sporadic. Since then, the defense has become increasingly comprehensive and systematic. The United States participation in this defense has evolved from the interim-aid programs and the support of Greece in 1947, through the Marshall plan and the steady development of mutual-defense assistance and the United States role in the North Atlantic Treaty Organization. The Mutual Security Program now before the Congress represents an appropriate and necessary next step.

On the record, these policies and their execution have been vindicated by events.

I shall undertake briefly to review the record, and to outline the job being done and which must be done, particularly in its economic and production aspects.

II. THE RECORD TO DATE ON THE ECONOMIC FRONT

A. Gains in production

1. *Industrial production.*—In 1947, the level of over-all industrial production in the 18 Marshall-plan countries had fallen to 87 percent of the level of 1938. In 1950 it had increased to 127 percent of the 1938 level. This increase represents an improvement of 40 percent since 1947.

2. *Agricultural production.*—In 1947–48, the level of over-all agricultural production in the Marshall-plan countries was only 88 percent of the prewar level.

In 1950-51 it was 110 percent of the prewar level, representing an improvement of 25 percent since 1947-48.

3. *Industrial production—Steel; electric power; oil refining; coal; rail transport.*—Advances of the same order have been registered in the production of basic materials and services.

(a) *Steel.*—Steel production, which in 1947 was down to 68 percent of the 1938 level, was up to 112 percent of this level in 1950, representing an advance of 65 percent.

(b) *Electric power.*—The production of electric power, which was at 181 percent of the 1938 level in 1947, was up to 178 percent in 1950, an increase of 37 percent.

(c) *Petroleum refining.*—Oil-refining capacity, which in 1947 was equal to the prewar level, was raised to 300 percent of the prewar level in 1950, an increase of 200 percent.

(d) *Coal.*—Coal production, off to 77 percent of the 1938 level in 1947, was up to 93 percent in 1950.

(e) *Rail transport.*—Rail transportation, which was at about 105 percent of prewar levels in 1947, was up to 124 percent of the prewar level in 1950, an improvement of 18 percent.

B. Gains in intra-European trade

In 1947, the vital process of exchanging goods and services between the European countries was at a very low ebb. The aggregate volume of this trade for the Marshall-plan countries in 1947 was only 60 percent of that in 1938. In 1950 the volume of this trade rose to 124 percent of the 1938 level.

C. Deduction of dollar deficit

In 1947, the aggregate dollar deficit of the Marshall-plan countries reached a level of \$8.5 billion. In 1950-51, this had been cut sharply to \$1.0 billion.

D. Progress toward economic integration

Special mention should be made of three important steps toward the development of free Europe's resources in terms of Europe as a whole.

1. *The European Payments Union.*—One of these is the establishment of the European Payments Union. During its first year of actual operation, it faced successfully two crises. One was the abrupt pressure upon European payments patterns resulting from the Communist aggression in Korea. The other was a sudden and critical drain on German payments resources. The initiative and responsibility displayed by the Managing Board of EPU give solid promise for the constructive development of this institution.

2. *Trade liberalization.*—In the course of the last 12 months, member countries of the OEEC (with exception of a few countries faced by special financial difficulties) agreed to remove all import quotas on goods accounting for 75 percent of the value of their imports on private account from other member countries in 1948.

3. *Schuman plan.*—The Schuman plan has been initiated. The plan is designed to establish conditions under which the coal and iron and steel industries of six Western European countries would operate in a single market. Within this market, it is contemplated that all tariff and quota restrictions on coal, iron, and steel are to be abolished. The plan now awaits the necessary parliamentary approval to go into effect.

III. THE RECORD ON THE POLITICAL, LABOR, AND INFORMATION FRONTS, AND IN BERLIN AND GREECE

A. Gains on the political front

1. *Communist strength in parliaments.*—In Britain, the two Communists who had been members of Parliament have been defeated. In Norway, the 11 Communists who had been members of Parliament have been defeated. In the Netherlands, the number of Communist members of Parliament has dropped from 10 to 8 (out of a total of 100). In France the Communist membership in the Parliament has been reduced from 181 to 101. In Belgium, the Communist membership in Parliament was reduced from 23 to 7. In Austria's postwar parliamentary election, the Communists won only 5 out of 165 seats. In the first parliamentary elections in the Federal Republic of Germany, no Communist candidate succeeded in winning a majority vote in any district. Through

the workings of the German system of proportional representation, 15 Communists are members of the Bundestag, whose total membership is 402.

Despite these gains, the size of the Communist vote in the recent elections in France and in Italy make it clear that the struggle on the political front is still a matter of grave concern.

2. *Turkey*.—The dramatic evolution of government in Turkey, through free elections, to a parliamentary democracy, is, of course, primarily a tribute to the people of Turkey and its leaders. They were better able to succeed in their remarkable efforts in the context of the Marshall plan and European cooperation.

B. Gains on the labor front

Gains on the labor front include—1. *The rise and increased strength of the free trade-unions in France—FO and CFTC*.—It is estimated that since 1947 the Communist-dominated CGT has lost close to 2,000,000 of its members. It remains, however, the largest labor-union federation in France, with a membership of from 3 to 3.5 million. Many of these have remained unaffiliated with any union; many have joined the FO and CFTC. The membership of FO now stands at about 800,000; that of the CFTC at between 500,000 and 600,000.

2. *The rise of the free trade-unions in Italy—CISL*.—It is estimated that the Communist-led CGIL has lost close to 2.5 million members. But it remains the largest labor-union federation in Italy, with a membership between 2.5 and 3 million. The newly formed free labor union, the CISL, has a membership of about 1,200,000. Another smaller non-Communist union, the UIL, has a membership of 300,000.

3. *The rise of the International Confederation of Free Trade-Unions (ICTFU) and the numerous withdrawals from the World Federation of Free Trade-Unions (WFTU)*.—The ICTFU now includes in its membership free unions from 60 countries with an estimated membership of 52.5 million.

4. *The failure of the Communist-dominated unions, in spite of strenuous efforts, to close the ports of Marseilles, Cherbourg, Antwerp, Genoa, and Naples and other great ports to arms-aid shipments*.—Despite these gains, the continuing grip of the Communists on the largest labor unions of France and Italy remains one of the serious danger points in Europe.

C. Results on the information front

1. *Newspaper coverage on economic aid*.—Western Europe's 2,000 daily newspapers have this past year given an average of 8,000 articles per week to their 60,000,000 readers on American economic aid, twice as many as a year ago.

2. *Newspaper coverage on the Marshall plan*.—ECA's monthly newspaper coverages are being shown in commercial theaters in Europe with an average weekly audience of 30,000,000 people, and ECA documentary films were shown to a total commercial audience of 64,000,000 and to a total noncommercial audience of 33,000,000 during the past 12 months.

3. *Radio coverage on the Marshall plan*.—In programs varying in length from 5 minutes to 1 hour, 45 ECA radio shows per week have been broadcast on the networks of the 17 Marshall-plan countries to an estimated audience of 125,000,000.

4. *Other forms of information*.—More than 26,000,000 Europeans have seen 50 Marshall-plan exhibits during the past year. To tell the story of the motives and solid practical results of American aid, wall newspapers on ECA have been widely distributed in Turkey; mobile motion-picture units have been used in Italy and France; an exhibit boat has been used among the Greek islands; barges in Holland; and a traveling train in Germany, Austria, France, Italy, and Greece.

5. *Decline in Communist newspapers circulation*.—Since 1947, with one exception, every French Communist daily newspaper, every Communist weekly, and every Communist monthly has significantly lost circulation. The exception is *Heures Claires*, a monthly picture and style magazine for women.

D. Victories in Berlin and Greece

The mention of Berlin and Greece tell their own story. These have been the two conspicuous points of external aggression against free Europe in the unrelenting Soviet Communist attempt to subjugate it.

The triumph of the free people of West Berlin and the airlift over the blockade and the triumph of the Greek people with American aid over the guerrilla attacks fomented and assisted from Soviet-dominated Europe are two immensely significant victories in the hard record of the years since the war.

IV. THE BUILD-UP OF EUROPE'S MILITARY DEFENSES

A. European defense budgets

In the fiscal year 1949-50, ending with the outbreak of the Communist aggression in Korea, the aggregate defense budgets of the nine European NATO countries (excluding Portugal) amount to \$4,045 million, or 5 percent of gross national product. The figure for the United Kingdom was \$2,105 million, or 5.7 percent of gross national product; for France, \$1,544 million, or 0.5 percent of gross national product; and for Italy, \$475 million, or 3.4 percent of gross national product.

In the fiscal year 1950-51, which has just been completed, European defense expenditures began to rise. The aggregate figure for these European NATO countries was \$5,979 million, or 6 percent of gross national product. The figure for the United Kingdom was \$2,450 million, or 0.2 percent; for France, \$2,235 million, or 8.2 percent; and for Italy, \$850 million, or 4.3 percent.

During the current fiscal year 1952, the defense budgets of these NATO countries will rise again, and at a faster rate.

(Here Ambassador Katz discussed plans by which the total NATO defense budgets would be increased.)

B. Comparison with the United States

In the United States, the pre-Korea level of defense expenditures during the fiscal year 1949-50 was \$13,200 million, or 5.1 percent of gross national product. This percentage was approximately the same as the percentage of the Western European countries. In the fiscal year 1950/51, however, the defense budget level was upped to \$22,200 million, or 7.3 percent of gross national product, which was substantially higher than the figure of 6 percent of gross national product in Western Europe. In the fiscal year 1952, the President has recommended a level of defense expenditures which, if the recommended expenditures for foreign aid, both military and economic, are included, would aggregate \$16,000 million. This figure is stated on an expenditure, as contrasted with an appropriation basis, the expenditure basis being a proper one to use in comparing American with European figures. Expenditures of this level will amount to about 14 percent of gross national product. [Here Ambassador Katz compared the defense expenditures of the United States in relation to the gross national product with the projected increases in Western Europe.]

C. Basic indicators to assist in evaluating foregoing data on a comparative basis

1. *Per capita gross nation product.*—In the United States, per capita gross national product for the fiscal year 1950/51 was \$1083. In the nine European NATO countries (excluding Portugal), it was \$600. In the United States, this figure will increase to \$2143 in the fiscal year 1952. In Europe and NATO countries it will increase likewise, but only to \$620.

2. *Real wages.*—During the pre-Korean period (early 1950), approximately 7 hours of labor were required in the United States to earn enough to buy one pair of shoes. The corresponding figure for the European NATO countries ranged from 13 hours in United Kingdom to 55 hours in Italy.

In the United States, 34 minutes of labor were required to buy a pound of butter, as compared to 40 minutes in United Kingdom, 3 hours in France, and 8 hours and 20 minutes in Italy.

To buy a pair of worker's overalls requires 2 hours 0 minutes of work in the United States, 10 hours 22 minutes in the United Kingdom, 14 hours 30 minutes in France, 48 hours 37 minutes in Italy.

To earn a 0.7 cubic-foot refrigerator required 153 hours of work in the United States, 637 hours in the United Kingdom, and 604 hours in Italy.

In the United States a bicycle can be earned in 35 hours, while it takes 90 hours on the average to earn one in United Kingdom, 118 hours in France, 138 hours in Italy.

3. *Trends in per capita consumption.*—Between 1939 and 1950/51, per capita consumption in the United States rose 30 percent. In the European NATO countries, it was, with some variation between countries, about the same in 1950/51 as in 1939.

These are basic facts which must be kept in mind when a comparison between the United States and Western Europe is made.

V. ECONOMIC AND PRODUCTION ASPECTS OF EUROPE'S DEFENSE BUILD-UP

A. Continued increases in basic production

1. *Over-all production.*—On the basis of current indications, we believe that the aggregate gross national product of the European NATO countries can be increased during the next year from the present level of about \$101 billion to a new high level of about \$105 billion, or an increase of approximately 4 percent.

2. *Coal.*—It is particularly important that the production of coal be stepped up, since coal is currently being imported from the United States, at the rate of 2½ million tons per month. Our European NATO partners are alive to the gravity of the problem, and strenuous efforts will be made further to increase coal production.

3. *Petroleum.*—European refining capacity continues to be rapidly augmented. It is expected that the present production rate of 1 million barrels per day will be increased to a rate of 1,250,000 barrels per day by the end of 1952.

4. *Sulfur.*—Sulfur is critically short in Western Europe. Since exports from the United States are the chief source of European supply, Europe is now largely dependent on the size of United States export allocations. However, Europe is undertaking to expand supplies of sulfur from pyrites, anhydrites, and zinc blende to substitute for crude sulfur imported from the United States.

5. *Electric power.*—Electric power is in short supply in nearly all the Western European countries. However, additions to generating capacity are being made at the rate of 5.2 million kilowatts (or approximately 9 percent) per year. Additional expansion plans are under consideration.

6. *Nonferrous metals.*—The production of the six principal nonferrous metals (aluminum, copper, lead, zinc, tin, and nickel) in the Marshall plan countries and their overseas territories increased from 340,000 tons in the first quarter of 1950 to 378,000 tons in the first quarter of 1951. Large development projects, including lead and zinc mines in Morocco and aluminum refining facilities in Norway, have been or will shortly be instituted.

7. *Food.*—The increases in agricultural production since 1947 have no more than kept pace with increases in population, and more intensive efforts will be required in the future. It is expected that over-all agricultural production will increase by approximately 6 to 8 percent in the next 2 years, but it is possible that these estimates may be upset as a result of unfavorable weather conditions.

B. Productivity

There is good reason to believe that the level of industrial production per man-hour can be increased by approximately 4 percent during the next fiscal year, or two in the European NATO countries taken as a whole.

C. Controlling the use of materials in short supply

A few countries (the United Kingdom and the Netherlands) have established a form of priority system under which certain critical materials are allocated to defense and other essential industries. Across-the-board reductions in the use of certain materials have been made by some countries (particularly the United Kingdom and Norway) and end-use prohibitions similar to those in the United States have been applied in a number of countries. With respect to a very limited list of materials, principally copper and other nonferrous metals, there has been a limited application of inventory controls.

In the case of materials requiring import licenses, the necessary end use of quantitative controls can to some extent be effected through the administration of import controls.

The actual margin available for reduction in less essential uses is naturally more limited in Europe than in the United States, because of lower levels of consumption. For example, the United Kingdom can produce about 400,000 automobiles a year, of which 320,000 are reserved for export to earn vital foreign exchange. As a result, only 1 person in 335 has even a chance to purchase a car in any year, as compared with 1 in 35 in the United States.

VI. THE FUNCTION OF ECONOMIC ASSISTANCE

The mutual defense assistance program which has been recommended to the Congress includes a request for economic assistance to Europe in the amount of \$1,850,000,000. After making allowance for certain sums to cover the development of basic materials, ocean freight for voluntary relief packages, technical assistance, and recommended aid to Yugoslavia, there would be left \$1,512,000,000 for economic assistance to the countries of Europe which would fall within the program.

By economic assistance is meant assistance other than military end products—i. e., tools, materials, equipment, and food for the purchase of which dollars are required. Properly understood, economic assistance and military assistance are two phases of a single process. Military aid—i. e., grants in the form of military end products—is in fact also economic aid, since in the absence of such aid the drain upon the economy of the recipient country to build up its necessary defenses would be much greater. Economic assistance—i. e., aid in the form of dollars to purchase tools, materials, equipment, and food—is also in fact military aid, in that it makes possible the effective mobilization of the recipient countries' resources to build up their military defenses. The principal functions of economic assistance for helping to build up defenses of Europe against aggression are these:

A. Effective mobilization of Europe's resources for the manufacture of arms

1. The countries of Europe have major resources for the production of military equipment and supplies in the form of management, labor, research scientists and technicians, facilities and materials. In themselves, they are inadequate to build up the equipment and supplies needed at a sufficiently rapid rate. When supplemented by materials, tools, and productive equipment from the United States, their capacity to produce is significantly increased. For the United States each article of military equipment and supplies produced is much less costly than the same article would have been if produced entirely from the resources of the United States.

B. Increasing basic production

The capacity of Europe both to produce armaments and to maintain operating defensive forces depends upon basic elements in its economy, such as transportation, communications, electric power, fuel, steel, and food. Economic assistance which increases the strength of these basic elements of the European economy correspondingly increases its defensive strength.

C. Defense against internal aggression

The Soviet Communist offensive against free Europe is both internal and external. Without economic assistance, the necessary rate of build-up of military defenses would be impossible for the countries of Europe and the effort to achieve such a rate of build-up would lead to inflation, internal dislocation, and intolerable strain which would render them vulnerable to internal collapse and attack from within.

(The statements of General Kibler and Mr. Batt have been inserted in the executive session record.)

Chairman RICHARDS. Mr. Chipersfield, do you have any questions that you want to ask on the political, economic, or military phase of this problem?

Mr. CHIPERSFIELD. I would like to ask what use is going to be made of counterpart funds.

Ambassador KATZ. I might answer that, Mr. Chipersfield. Under the statute in its present form counterpart cannot be used for military purposes. We think the statute should be amended.

Mr. CHIPERSFIELD. We have discussed that. It probably will be changed.

Ambassador KATZ. I think it should be. Does that answer your question?

Mr. CHIPERSFIELD. Do you think we should have control of those counterpart funds?

Ambassador KATZ. My view would be this: I think the statute should specify the purpose for which counterpart should be used. I think it should specify the three or four purposes which would be in the United States interest.

In my view, those would be three or four things: the use of counterpart for the military build-up, the use of counterpart for strategic materials, and to increase the productivity of the European plant.

Mr. CHIPPERFIELD. How much counterpart is now available? We could not get the answer to that.

Ambassador KATZ. In the aggregate, all currency!

**STATEMENT OF HON. WILLIAM L. BATT, UNITED STATES MEMBER,
DEFENSE PRODUCTION BOARD**

Mr. BATT. About \$300 million.

Ambassador KATZ. I would not know the exact figure unfortunately, if I had to add in the drachma. If you want a rough figure, we gave them \$12 million worth of aid that was reflected in a corresponding part counterpart. That would be about \$11 million of counterpart by which they have probably spent three-quarters.

Mr. CHIPPERFIELD. We were given two lists of figures yesterday. One was the amount that would have been given to a country if there had not been additional war effort, and the other amount was what was necessary because of the war effort.

I recall, for example, we would have given Italy \$75 million for general economic relief, and we are going to give her an additional \$200 million because of the war effort.

Would it be feasible that we take the counterpart from the \$200 million that we are going to give her this year and make use of the production facilities in Italy, be it shipbuilding or what not, and use counterpart for military purposes in that country?

Ambassador KATZ. Mr. Chipperfield, the direct and practical answer to your question is "Yes." There are a lot of technical curlicues in that. If you want me to go into those, I will. Substantially, as a practical matter, the answer is "Yes."

Mr. CHIPPERFIELD. Are you going to use counterpart as part of the additional effort of the Italian Government? In other words, are they lifting themselves up instead of making an additional effort by using counterpart and saying, "What a big boy am I?"

Ambassador KATZ. Maybe I misunderstood your question. Did you mean to use the counterpart to buy equipment for the American forces?

Mr. CHIPPERFIELD. For anything that is necessary.

Ambassador KATZ. It would be very easy to provide that counterpart be used for Italian forces. Is that what you have in mind?

Mr. CHIPPERFIELD. Why Italian?

Ambassador KATZ. For European forces.

Mr. CHIPPERFIELD. NATO forces.

Ambassador KATZ. Yes.

Mr. CHIPPERFIELD. If they use counterpart made possible by us and say, "Look what a great additional effort we are making," they are not making it at all.

I think we should have control of counterpart, and say, "You make your extra effort. We are giving you \$200 million for that reason." And then we take control of the counterpart and make additional effort along military lines for NATO countries.

They paid for our products in counterpart funds, but we are all in this thing together. It seems to me that we should make use of the additional money we are putting in for military efforts, and use those counterpart funds for that purpose. Do you agree with me?

Ambassador KATZ. Mr. Chipfield, I would like to answer that question this way: What you suggest can be done, in my opinion. Therefore, the only question that I can see is, Is it in the United States' interest to do it that way?

My own view would be to provide that counterpart may on agreement between the country and the United States be used for armament production. And then make our decisions as we go along in the light of all the facts to see what gets us the best results.

Mr. SMITH. I would like to ask a question along that line. Has this matter been explored with the other governments on the point that has been raised by Mr. Chipfield?

Ambassador KATZ. Informally a number of the other governments have been told that we would recommend that the Congress amend the statute to provide that one of the primary uses for 95 percent counterpart will be armament.

To the best of my knowledge it has not been suggested to them that the control over the disposition of the counterpart should be under unilateral United States control.

What they understood was that the counterpart should be spent for the following classes of purposes upon agreement between the government and the United States, one of the primary purposes being armament.

Mr. SMITH. Part of it has been used, as a matter of fact, to retire some indebtedness; is that not true?

Mr. BATT. In Great Britain.

Ambassador KATZ. In Norway, Denmark, and France.

Mr. CHIPFIELD. That is all, Mr. Chairman.

Chairman RICHARDS. I want to ask this question. I am sure we are all impressed by the gains made by our friends over there in supplying themselves.

I would like to know to what extent they are using their manufacturing capacity as a give-and-take proposition to supply each other in this over-all program.

Would you say something on that?

(Discussion off the record.)

Mr. BATT. They are moving upward. The difficulty in every case as to using spare facilities, and there are spare facilities, particularly in France and Italy, to a lesser degree in Belgium, is that they do not have the budgets that enable them to buy the products of their own factories.

You have heard from various testimony that we have considered they are doing pretty nearly, within 10 or 15 percent, of what they can presently be expected to do in the way of budgets for rearmament.

Those budgets are not nearly big enough to supply their deficiencies. These deficiencies exist, and the Defense Production Board is making clear to all these countries the size of these deficiencies and where they exist.

They are stepping up their production, Mr. Richards, but it will never pick up this gap because there are certain things in a modern war they cannot make.

They do not have facilities for heavy artillery or heavy bombers.

Chairman RICHARDS. But there are certain things they can make and they are not doing it.

Mr. BATT. Yes. In the field of spare parts, small arms, small-arms ammunition, electronics, standard engineering parts, they have got more capacity than their deficiencies would presently occupy.

All they need however is the financial ability to utilize those capacities.

Mr. CHIPERFIELD. How about using counterpart?

Mr. BATT. Of course, your question runs directly to that. Offshore procurement from the United States we have not used up to the present time. We are actively discussing it now. And I think it is proper for me to say that we are firming up a decision, to be cleared through the proper sources, to do some procurement in Europe for our own forces or for the use of the NATO forces through these idle facilities.

As soon as we can get around to it, the use of counterpart for that purpose—

Mr. CHIPERFIELD. You could also use dollars in Europe?

Mr. BATT. Yes. We have not done that up to this point. We have been hesitant to do that. We were so afraid that the moment we started putting dollars in there they would sit back in the traces and say, "Well, obviously the United States is going to do it." There has been enough of that tendency anyway.

Our own analysis, which we had to make for presentation to this Congress, was that they were up to within 10 or 15 percent of all they could do. There the so-called disincentive argument begins to lose substance.

We have said they are doing all they can. Then there is not much disincentive in putting some American dollars over there, particularly if we put them over there to replace items that we have committed ourselves to under end-item aid.

The United States is chuck-a-block. If we can take some of that load off the shoulders of our own production facilities, I think our own production people will be glad.

The thing we have talked about as a starter are ammunition, particularly small-arms ammunition, and spare parts. Those are consumable goods. The significance of that is that once we get that capital build-up, which largely has to come from the United States because it cannot be done over there in any reasonable time, who is going to keep the thing going? The Europeans ought to keep it going. The maintenance of this equipment and the ammunition required will be the big element.

If we can prime that pump, get those lines going, with direct dollars, as soon as we can develop it with the use of counterpart, then we are in a position to say to those people, "Boys, you take it over. It is something you can do." Is that a reasonable answer to your question?

Chairman RICHARDS. I think that is good.

(Discussion off the record.)

Ambassador KATZ. We have estimated if the financing were there and the materials were available, if the labor were available, there is physical capacity to make another \$500 or \$600 million worth of stuff.

When we are talking about the potential increase, that is the potential; that is to say, the physical capacity for about \$500 or \$600 million worth of stuff.

It is stuff of a certain kind, as Mr. Batt pointed out, electronics, small arms, small-arms ammunition, certain engineering types of equipment, transport vehicles, and the rest.

If you provide the financing it does not follow, even if you put United States dollars in there, that you will actually get another half billion dollars' worth of production.

That will depend on whether the materials flow in. You may pass from the present situation where the limiting factor is financing to a new situation where the limiting factor is materials.

The situation that Mr. Batt referred to, which we have recommended and may be accepted, rests on two practical propositions.

The first is that no one will ever know how much of that half billion you can get until you try, so let us start and try.

The second is that since at the end of this period we want these countries to be able to maintain these forces themselves there is a second reason for activating this capacity. That is to say that in addition to getting the extra half billion dollars of production we want these fellows started on making the ammunition and spare parts they will have to make if they are to maintain the force after 1954.

What we will actually get will be something between zero and \$500 million. Nobody can give you a statistical figure.

Chairman RICHARDS. You will get that by what time?

Ambassador KATZ. That would depend on when we start buying. Our calculations were based on the assumption that when we made those assumptions we figured if we could start buying then we could realize the half billion assuming the materials would be there.

The later you start the less you get.

Mr. BATT. I want to emphasize the effect of raw materials, machinery tools, and the like in Europe. It is a great element of the problem. In Great Britain today financing is not the major element at all. It is raw materials, and, in Great Britain, manpower and machinery. We are going to run into that.

But we are also aware of the fact that another problem in getting spare-parts manufacture started is the problem of getting out of the United States, the firms in the United States, the drawings and specifications and the know-how for these spare parts. Gentlemen, I tell you that is not easy.

Ammunition we think we can deal with. That is a military problem. They have the specifications for it. Even some of the ammunition is tied up with patents in 16 different ways. Many of the spare parts are much worse.

We have been trying to develop a spare-parts program for study for the last 8 months. While we are closer to having it today, I assure you that we have had great difficulties in agreeing on spare parts to be made in Europe, for a thousand and one perfectly logical reasons.

I think the bottleneck is broken. You ask how soon. I would say if someone was ready to hand to me the blueprints and specifications we could go over and get the orders placed in 30 days.

I know we will not have the technical information that soon on spare parts. We ought to get it on ammunition. Fortunately, the services like this idea because it is a great addition to our security. It is far better to have all these small plants building the stuff that is necessary to keep the Army going, and have it right there independent of transport.

I gave you the reason why we have shied off it up to this time. We now are wholeheartedly of the opinion this is the time to start doing it.

Chairman RICHARDS. In answer to Mr. Chipperfield's question, you would say you are definitely shaping up a program to use counterpart for some of the—

Mr. BATT. Yes; but we do not want to be tied to counterpart, because you have to negotiate out the counterpart transactions.

We would like to start the pump flowing by diverting some of the dollars which are in the end-item program in the United States promptly as a first step, and then start to negotiate the use of counterpart to go along with it.

Mr. CHIPPERFIELD. You would not have to negotiate it if Congress made it a condition for our aid, that we have control of them.

Mr. BATT. Ambassador Katz pointed out certain difficulties to you, because this is, after all, a mutual job we are trying to do in Europe. We will all tell you, I think, that it is important that we maintain that element of mutuality.

Chairman RICHARDS. Mr. Battle, do you want to ask a question?

Mr. BATTLE. No questions, Mr. Chairman; but I would like to comment that I think most of us, at least those who were on the Economic Subcommittee that visited these gentlemen not long ago, were very much impressed by the caliber of personnel we had, and figured chiefly that the degree of success that they and we were enjoying was due more to their individual initiative and capacity rather than the organizational procedure that they were working under.

I just wanted to thank them personally, Mr. Chairman, for their kindness and patience in the way they went about helping us to get the information we wanted when we were on this trip.

Chairman RICHARDS. Mr. Vorys.

Mr. VORYS. How much counterpart is there uncommitted?

Ambassador KATZ. I do not know the exact figure. It would be around—

Mr. VORYS. Who knows the exact figure? We tried to get it yesterday. This is July 28. You are talking to a legislative committee. We asked the whole American team. Now we have the whole European team. Can somebody tell us that?

Ambassador KATZ. I will send out and see if we can get it.

Mr. VORYS. I would like to have the team explain about this 400,000 troops for Europe. That is part of the NATO program officially now, but we have never heard of that in this committee.

Chairman RICHARDS. What 400,000 troops—do you have reference to the story in the papers this morning?

Mr. VORYS. That the Secretary of Defense says is in the program.

Chairman RICHARDS. I do not know if any member of this team can tell us about that. What about that, General Kibler?

General KIBLER. Can this be off the record?

Chairman RICHARDS. Off the record.

(Discussion off the record.)

Chairman RICHARDS. Mr. Carnahan.

Mr. CARNAHAN. No questions, Mr. Chairman.

Chairman RICHARDS. Mrs. Bolton.

Mrs. BOLTON. Mr. Katz, I have checked these two statements of yours and I find only one paragraph from your secret testimony which is not included in the press release.

Ambassador KATZ. That is right. I do not know why they classified the whole thing secret. I guess it is because they are all grouped together. I tried to provide figures which you could use, and I had them checked here.

On the bottom of page 6 and at the top of page 7 there are a couple of sentences which should be classified, so they classified the whole thing secret.

Mr. BATT. They have to, securitywise.

Ambassador KATZ. The unclassified document contains everything except those sentences.

Mr. BATT. Mine won't keep you awake at night, for I have taken all the secret material out of it and it is a confidential document only.

Mrs. BOLTON. Thank you.

Chairman RICHARDS. Mr. Burleson.

Mr. BURLESON. I have no other questions, Mr. Chairman.

Chairman RICHARDS. Mr. Smith.

Mr. SMITH. This question is addressed to whoever wants to answer it.

What criteria are being used to determine to what extent the budgets of the European countries will stand the rearmament program?

Ambassador SPOFFORD. I think Mr. Katz can answer that, and others may then want to comment on it.

Ambassador KATZ. We go at it this way: First, I should say directly there really is not any precise calculation prepared. What we do is the following thing: First we take the budget for the country itself, which represents a minimum, and we then calculate various levels of possible increases, what the existing tax load is, and make a practical problem of it as to how much they could increase their tax in the course of the year, given the actual political factual realities. Then we figure how much of a deficit that increased budget would in fact represent. Then we figure what that deficit would mean to the price levels, that is, the inflationary factors with regard to the standard of living within the country.

We then make a judgment as to how much of a cut the standard of living in the country can take as a practical matter, so it is more or less a matter of judgments you run off and is not scientifically accurate or precise, and we would not pretend it was.

Mr. SMITH. Do you do the same thing as far as the United States budget is concerned?

Ambassador KATZ. That is not our job, Mr. Smith.

Mr. SMITH. I know, but do you take into consideration how that affects us?

Ambassador KATZ. We do in this practical sense——

Mr. SMITH. We are certainly furnishing the things the NATO countries need.

Ambassador KATZ. We do in this sense: Our idea is to get as much out of the Europeans as can conceivably be gotten out of them, and to keep to a minimum the United States load, but we do not go into the United States budget itself.

Mr. SMITH. From whom can I get an answer to that question? I want to have an answer as to whether or not we in this country are using the same criteria or the same rules they are using to set up these budgets in the NATO countries, excluding the United States.

Now, in regard to this matter of inflation and the standards of living, have you any suggestions as to how we might approach legislatively this question of the standards of living of the people over there? Also, with regard to inflation. As we get the figures today on the standards of living per capita in those European countries we know that the Marshall plan has not done much to increase their standard of living. There has been some rise, but it has been a slight rise.

Ambassador KATZ. There has been a tremendous rise since 1947, when the Marshall plan started. There was no rise as against prewar.

Mr. SMITH. No. They gave us the figures for 1947. They were in the hearings the other day. I think the figures actually, as applied to France, show that they have gone from about 524 to 560, something like that. That is the change in the over-all picture, it seems to me. It is one of the basic things, it seems to me, that we must consider in this whole rearmament of Europe for this reason: Why should these people be much concerned about getting behind this program if it does not mean anything to them?

A lot of money has been poured into Europe. Who has gotten it? We know it has gone into productive capacity to a great extent. Now, there must be some profits along the line somewhere, but the people are not getting the benefit of that increased productivity.

Is there anything we can do legislatively to correct that situation? Should we say, "We will go along with the program if you do thus and so in order to insure that the French people are going to get the benefit of this increased production"? In other words, what is it that the Frenchman is willing to do in order to get behind this program? What is the incentive, if any, or is it merely an operation, as the Communists now say, to help American imperialism. That is one of great questions I am concerned with.

Ambassador KATZ. There is no question that you are touching upon one of the fundamental problems, which is, how do you change the condition of a large section of the French, Italian, and German population. As a practical matter, I do not think the way to do that is to have the United States Government legislate for France, Italy, and Germany, although I must say it is sometimes doing it.

Mr. SMITH. I do not mean that by any means. We ought not to do that; but here we are pouring out all this money, and I want to know what is there that we can do here in our own Government which would say, conditionwise, "You do thus and so if you want our help"?

Perhaps we are taking the attitude that this is our job and Western Europe is our first line of defense, and notwithstanding all of these other things, we are going to continue to do this job regardless of its effect upon the people as a whole. If this is the case it is strictly a military approach.

It was not my understanding that we had assumed that position. I hope we have not. I can appreciate that perhaps legislatively we cannot do too much along that line, but it is certainly a very great problem and it is time that serious consideration should be given to it.

Ambassador KATZ. I would agree completely with your suggestion, Mr. Smith, that from the practical point of view of the United States' interests in Europe the problem of how to get better results of the nature you are talking about should be treated as a major instance of United States interest. The question of how we get results is a very complicated one. I agree it is something we should give all our attention to in order to see how we get the result.

Mr. BATT. Can I tell you something that interested me, and I think it would interest you, and I have never heard it commented on in any testimony? That is, the cost of equipping an army today compared with the recent period we all know about, in which I was involved up to my neck. Our heaviest bomber in 1941 cost about \$300,000 to build, as you can see when you break that down into terms of tools, man-hours, and raw materials, and so forth. Today our heaviest bomber costs \$4,000,000 to build, and heavier ones are in process of development.

Chairman RICHARDS. That is not due entirely to the cost of materials going up either.

Mr. BATT. No. It is just a bigger and more elaborate piece of equipment. Many fighters then were not equipped with electronic equipment. Today we are trying to equip every fighter with complete electronic equipment.

In 1941 it cost \$145 an hour to operate our heaviest bomber. Today it costs us \$1,000 an hour.

We had a commission that came over to see us about a month ago on ball bearings, which I think some of you understand I was supposed to know something about once upon a time. They came over to see about getting small ball bearings in Europe. I said, "What are they coming over here for? We have plenty of capacity in the United States to deal with anything we have to make." I knew what we had in the last war. That is why I made the statement.

They came over and showed me that the demand for small ball bearings today—and this is classified information——

(Discussion off the record.)

Mr. BATT. I give you that as a more specific answer to your question as to whether production is increasing in Europe. It is substantially increasing. There is no doubt about that, although it is still small, and has to be small, compared to the United States.

Mr. SMITH. May I ask Mr. Batt one more question in connection with this matter of production? If we are aiming at a 1954 target date for European self-sufficiency, will the other countries then be able to take care of their own production by that time?

Mr. BATT. I tried to cover that, but I did not do it specifically enough, I know. In connection with spare parts, small arms and small-arms ammunition I tried to make it clear that in that field they have capacity. It is not being used. It is in order to get that capacity activated that we are proposing to take up offshore procurement by one device or another along the line indicated by Mr. Chipfield.

They have the capacity generally to keep this thing going once it is set up. Do you agree with that statement, Frank?

General KIBLER. Yes.

Ambassador KATZ. That would be to this extent: There are some things they would not be able to make themselves, and we would hope by 1954 they would be able to buy those.

Mr. BATT. I made it perfectly clear they could not make heavy bombers or heavy artillery.

Chairman RICHARDS. Are you through, Mr. Smith?

Mr. SMITH. Yes.

Chairman RICHARDS. Mr. Mansfield.

Mr. MANSFIELD. We are all delighted that we are having this opportunity to meet with you again and to carry on the conferences we had while in Europe last month.

Ambassador Spofford, I was very pleased that you brought out the fact that neutralism as a political force this year is practically dead. It was quite prevalent a year ago, especially prior to Korea.

That indicates, of course, that there is a sharp cleavage now and the middle group has evidently come over more to our side.

You also emphasized that communism is something which we could not take too lightly, I recall. In talking with General Eisenhower he mentioned the fact that in this military program we cannot afford to go too far, because if we did then the standard of living would be depressed still more and the result would be just the opposite of what we are trying to achieve at the proper time.

Is it a true statement of fact that on the basis of this relatively small increase in the standard of living in certain of these European countries, at least France and Italy, that it may be considered one of the reasons why the Communist Party of both those countries is still able to poll a tremendously strong popular vote?

Ambassador Spofford. I could answer that, Mr. Mansfield. I think that is true. I think you are dealing there with something that goes pretty far back. I think it has been a problem of distribution of wealth in the broad sense in France and Italy, and I think the fact is that there is too large a proportion of the population in France and Italy that does not have a sufficient say in the present order of things.

I think the Communist vote is a protest vote against that.

I cannot be too precise about this, but I think a large part of it is not a vote in favor of the Soviet, but a vote against the present system. I say that is a condition that is not created by this defense effort. That has been in the picture for a long time.

I think what General Eisenhower said is that we all believe if you go too far, too fast, then you may recreate the condition which the European Recovery Program met. That involves the balance between getting the maximum in terms of results that go into the essentially nonproductive job of setting up a defense machine and increasing and not decreasing the standard of living in certain of these key segments of the population, such as the labor groups, for the most part. You try to do that so that you certainly do not increase the Communists, who are, as I say, not basically loyal to the present system. You certainly do not increase them, and you tend as far as you can to decrease them.

Mr. MANSFIELD. Evidently there has been some increase in the economic structure as it affects the ordinary people in France, because I understand that the election returns there indicate that on a popular basis the Communists polled 500,000 less than they did in the last election.

However, it does appear to me that while there is a great deal of hope in Europe at the present time, based on military strength, either actual or potential, that the weak spot in our endeavors is the fact that the program has not reached down to the little people sufficiently strong enough to give them a comparable degree of hope in that particular field.

In other words, as Mr. Smith said, the standard of living is a very potent factor, and it does appear that even with the judicious application of Marshall plan aid funds—which I fully approve of—there is still that weak factor to consider.

I wonder what could be done to bring about a further increase in the standard of living of these people in the NATO countries and thus to help draw them away from voting Communist at the polls?

Ambassador SPOFFORD. You have an immediate question that is before you when you talk about a further increase. You have this very serious price rise in Europe that you have had all over the world. I think the figures show that the wholesale prices have gone up in the past year from 20 to 40 percent, or an average of around 30 percent, I believe, as against the figure—and Mr. Katz will correct me if I am wrong—of about 16 percent here.

So that increase in the prices is a factor that you have to arrest. Then you have to go to work on the difficult process of raising the standard of living at the same time that you are putting an increased slice of the resources into defense.

The economic-aid program, of course, ties in with that, and I would like to have Ambassador Katz comment on this question, if he will.

Mr. MANSFIELD. Mr. Spofford, it is your assumption then that if it had not been for the inflation which is now taking place there, that very likely there would have been a sizable increase in the standard of living for the people of Europe?

Ambassador SPOFFORD. It has been on the way up.

Mr. MANSFIELD. It is a slow process anyway, at best.

Ambassador SPOFFORD. It is a slow process. I think the price rises of the last year have affected it in a serious way. They may have accounted for some of these election results.

Mr. MANSFIELD. Mr. Spofford, I want to ask you a question.

You mentioned patents. Will you explain to this committee just what the significance of patents is in the aid program now being carried on by this country for Europe?

Ambassador SPOFFORD. Patents?

Mr. MANSFIELD. Patents.

Ambassador SPOFFORD. I think it was Mr. Batt who mentioned it, but I will just answer the question this way and ask him to give you a comment on it also.

The production problem abroad involves not only patents, licenses, and designs, but you have a number of extremely difficult legal problems where patents are held by manufacturers here and it is difficult to get them released for manufacture abroad. It is a question we have been working on, but I think it has not been marked with much success today. It is a real drag on the production program abroad. Bill, that is in your class.

Mr. BATT. That is a satisfactory answer.

Mr. COOLIDGE. Mr. Chairman, might I put in there that this draft bill contains a provision which you will hear some testimony on, which is designed to relieve that situation.

Mr. MANSFIELD. I see. I know Mr. Ooms is going to be before the committee on Monday.

Mr. COOLIDGE. Yes. He is the man who will testify on this.

Mr. MANSFIELD. Mr. Batt, are we shipping trucks and jeeps to the NATO countries at the present time?

Mr. BATT. I expect we are. I will turn to General Kibler to answer that. It is part of the end-item aid program.

General KIBLER. We have in the past.

Mr. MANSFIELD. Is it possible for those European countries to build the trucks and jeeps necessary for their efforts?

General KIBLER. Not in the time required. Not in the time to correspond with the defense plans.

Mr. MANSFIELD. I can understand why it is impossible for them to build planes because of the tremendous time lag of 18 months to 2 years which is involved. However, it appears to me that with this oversupply of labor in a country like Italy, for example, and with their knowledge of making automobiles—and the same could be applied to France, I think—that is one item we would not have to build here for export abroad, and they could build themselves there out of their own funds.

Mr. BATT. You are absolutely right in theory, Mr. Mansfield, but I said the limitation to the situation on a good deal of this capacity was that their budgets are not big enough to produce the extra things like trucks or jeeps, which they regard as rather short-lead, and so do we. They regard them as short-lead-time items. When they break down their budget and decide how they are going to spend it, first they will put the long-lead items in there, as they should, and get those started. Then they will take the things which are most critical to the equipping of a force.

Then they will let those things, such as transport vehicles, wait. The British have not worried very much about it because they say, "If we really get in trouble we can requisition trucks out of our civilian economy." That does not apply to jeeps, of course.

We have been trying to get a jeep program started.

(Discussion off the record.)

Mr. BATT. When our military associates send troops there and they need some jeeps to make those troops effective they are for the present time sending them over.

However, we surely contemplate that capacity should be made available for the kind of thing they can make. They can make jeeps and ordinary commercial vehicles for back-up purposes in the quantities they need, in time.

Mr. MANSFIELD. Mr. Batt, what I had in mind was, that I believe there is unused automobile capacity in both France and Italy. Those countries have a very good automotive record over the years.

Mr. BATT. You are quite right.

Mr. MANSFIELD. Here we are building jeeps, for example, at great expense, and shipping them, when the same thing could be done over there more cheaply, even if we had to pay for them over there.

Mr. BATT. All right. Now you are going to off-shore purchasing. That is another matter. We could have had jeep production going today in Europe if it had been agreed that the starting of it with American dollars at that time was wise.

Mr. MANSFIELD. Could you use counterpart funds for that purpose?

Mr. BATT. Of course, Mr. Chipperfield raises that question. We cannot legally today. We hope you will make it possible for us to.

Ambassador KATZ. May I throw two cautions in on that? The first, Mr. Mansfield, is on the question of cost. When you get items like automotive equipment, the techniques and the volume involved in mass production are so important that actually it would probably cost you more even if you used American dollars to buy the truck in northern Italy or northern France, than it would in Detroit. We simply make them cheaper because of the production process and the great volume of production.

Mr. MANSFIELD. The difference is between the cost of producing the vehicles by mass production here with high labor costs and producing them there with a low cost of labor.

Ambassador KATZ. When it comes to that type of hardware the efficiency of American industry more than compensates for the low wages.

Mr. VORIS. Will the gentleman yield?

(Discussion off the record.)

Mr. MANSFIELD. What I had in mind, John, was not new facilities, but making use of available facilities and thinking of the fine automotive history both these countries have had over the years.

That is all, Mr. Chairman.

Mr. BATT. May I just make a statement off the record?

Chairman RICHARDS. Off the record.

(Discussion off the record.)

Mr. MANSFIELD. According to Mr. Katz, to do it on that basis would do more in the long run than it would over here.

Mr. BATT. He told you, Mr. Mansfield, that he was generalizing. There are instances and there are things that you can make somewhat cheaper over there. When you get to transport vehicles, that is an exception. It actually costs more for a truck in France or Italy than it costs for a truck from the United States.

Mrs. BOLTON. Including transportation?

Mr. BATT. That is not very much, Mrs. Bolton. I talked within the last 2 weeks to Canada's head of Willys-Overland about the cost of jeep production in Europe. In spite of this shortage in their real wage levels he says it is about a toss-up.

Ambassador KATZ. One reason why the recommendation to which Mr. Batt referred before is concentrated on spare parts and ammunition in Europe is that it depends on several factors.

One, we want to utilize European capacity.

Two, certain types of hardware are made more cheaply at home.

Three, certain types of production for security reasons we want to keep only in security areas.

Four, we want these countries to be self-sufficient after 1954.

Five, from the supply end of it they want to have the supply line for the maintenance and operation of an army there.

Putting them together we have come to the conclusion and recommended that the best net result is to utilize European capacity, that is, to provide American financing to utilize European capacity, concentrating on spare parts and ammunition.

If you do that you have as good a balance of all the factors as you can possibly have, and that is what we are really shooting for now.

Mr. BATT. You can add a sixth one to that, that in those particular things the efficiency of American manufacture is not so much relatively greater than that of Europe because it is not a peacetime thing which we are accustomed to producing in large quantity. There is sure to be an advantage in ammunition, I think, and in many spare parts.

Chairman RICHARDS. Would spare parts and ammunition amount to one-fifth of that?

Mr. BATT. Off the record, if I may?

Chairman RICHARDS. Off the record.

(Discussion off the record.)

Ambassador STOFFORD. Let me add a factor No. 7 to the six that Mr. Batt and Ambassador Katz put on the record. That is the very strong pressure of national pride of some of the countries to manufacture equipment for themselves, and sometimes it is equipment that economically they should not manufacture. That may be at their own expense.

For example, the French want to put more money than they should into certain types of armament because they would like to see France develop French weapons. Economically it would be better for them to put those resources into spare parts, but it is hard to convince them of that.

Chairman RICHARDS. That is one of your jobs.

Ambassador STOFFORD. Yes. I just wanted to add that seventh factor.

Mrs. BOLTON. Do they use women in the factories in France?

Mr. BATT. Oh, yes. In England it is about the same as we do.

Mrs. BOLTON. I know about England. It is about the same as with us?

Mr. BATT. Yes. I would think so on a rough guess. You do not see much difference.

Chairman RICHARDS. Before we go any further I would like to take up this suggestion of Mr. Vorys. I do not know if General Scott will make a statement about the 400,000 troops which are proposed to be sent to Europe and give us any information he has from headquarters. Do you want to do that, General Scott?

General SCOTT. I have been in touch with Secretary Marshall's office by telephone. He said he would furnish to the committee early next week a clarification of that 400,000 figure for troops in Europe if the committee desired it.

Chairman RICHARDS. Does that help you any, or not?

Mr. VORYS. I would like this on the record, because I am reading from what will be the public record of this committee on July 19.

I asked General Collins about this matter and I quoted Senator Green, who on February 19 said:

Up to the present time under the conditions as you see them now and believe you can reasonably forecast them, six divisions will do the trick?

General Collins answered:

Under the present world conditions, yes, sir.

I said to General Collins:

I want to ask you whether your answer would still be the same to that question.

General Collins answered:

Yea. Essentially the same.

Mr. CHIPERFIELD. What date was that?

Mr. VORYS. That was July 19.

General SCOTT. That is correct.

Mr. VORYS. Now, as to the divisional slice and all that sort of stuff, to which reference was made in the six-division discussion, General Bradley said the following for the Senate. This is public testimony, so I can read it:

Senator JOHNSON of Texas. But if you were making an estimate on your present plans based on four divisions and the men required to support them, your estimate would be 100,000?

General BRADLEY. The estimate would be approximately 100,000.

So that at the time of the Senate hearings it was roughly 100,000.

Chairman RICHARDS. What hearings are you talking about?

Mr. VORYS. The Senate hearings on the assignment of ground forces in European areas.

Chairman RICHARDS. You are not talking about this bill?

Mr. VORYS. It certainly has to do with this bill.

Chairman RICHARDS. I mean, the testimony was not in consideration of this particular bill over there?

Mr. VORYS. Yes. I quoted what General Collins said on July 19 to this committee.

Chairman RICHARDS. That is pertinent. It is in the record.

Mr. MANSFIELD. Will you please read that again as to what General Collins said? The reason I asked that is because there is a doubt in my mind as to just what the meaning of that is going to be.

Mr. VORYS. I will read it a little more fully. The question was asked him by Senator Green, as follows:

Senator GREEN. Up to the present time, under the conditions as you see them now and believe you can reasonably forecast them, six divisions will do the trick?

General COLLINS. Under the present world conditions, yes, sir.

That was the question of Senator Green. Then I said to him:

I want to ask you whether your answer would still be the same to that question?

General COLLINS. Yes. Essentially the same. Now, practically, it does not mean if world conditions change you would be necessarily limited to six divisions.

Skipping down again, he said:

However, if world conditions change, they might not be. You asked me if it would still be the case now. I said essentially the same. Yes.

I want to know if world conditions have changed in 9 days?

Mr. MANSFIELD. That 100,000 figure is what I am after, Mr. Vorys.

Chairman RICHARDS. Yes. That is what Senator Johnson was questioning on.

Mr. VORYS. On Senator Johnson's questions, it went as follows:

Senator JOHNSON of Texas. General Bradley, what is the approximate estimated size of our Armed Forces now in the European area?

General BRADLEY. Approximately 100,000. Ground troops, you are talking about?

Senator JOHNSON of Texas. Yes.

General BRADLEY. Approximately 100,000.

Senator JOHNSON of Texas. In your opinion, will 100,000 men be sufficient to supply the four divisions planned and the support necessary?

General BRADLEY. It will be an approximate figure. The question of supporting units is one which will have to be worked out by General Eisenhower and his staff. It may be that some of the units which we normally supply for our own integrated forces might be supplied by someone else in Europe.

Senator JOHNSON of Texas. But that is an approximate figure?

General BRADLEY. That is only an approximate figure, and I hate to use this division since because it has so many meanings.

Chairman RICHARDS. According to that ratio the 400,000 figure would be 16 divisions.

Mr. VORYS. According to that ratio 100,000 would be four divisions more to make up the six that was contemplated in the Senate hearings. That is what I was interrogating General Collins about. That was 200,000 men. Today we have a figure just double that.

General SCOTT. The Air Force is not included in your 200,000 figure.

General KIBLER. The 400,000 figure probably includes Air Force and Navy.

Chairman RICHARDS. Do you have anything to say on that while we are on it, General Scott?

Mr. MANSFIELD. Before the general says anything I want to explain why I raised the question. To me it does not seem to be accurate on the face of it because how can you have six divisions of 18 to 20,000 men to a division and expect to get by with 200,000 men, when you figure that the men in the divisions alone would be 110 to 120,000. That would mean you would have a back-up of less than one man for each man in a combat division.

Mr. VORYS. I am not a general.

Mr. MANSFIELD. I am not either.

Mr. VORYS. I am just reading what generals were saying.

I also think that to have the answers to all of our questions put off to the future, as of July 28, presents some difficulties, because we have to decide what these answers are.

Chairman RICHARDS. Let us hear what General Scott has to say about it.

General SCOTT. The only point I want to bring out is that there has been no change, sir, in any testimony of General Collins or General Marshall on that number of six divisions. Apparently the question is the support for those divisions and the numbers required for the other services.

I think that can be clarified in the statement that will be submitted by the Secretary.

Chairman RICHARDS. All right. Mr. Hays.

Mr. HAYS. Mr. Batt, this material, of course, comes to us in such volume that we cannot absorb it all, so if my question appears elementary you will understand.

(Discussion off the record.)

Mr. HAYS. This is on the record.

As I understand it, in the light of the things that Mr. Bissell had to say about the import-export equation, the whole idea of economic aid is to secure productiveness. I mean, it has actual production for military purposes as the objective.

Mr. BATT. Or military support. Something that directly supports the rearmament strength of the country.

Mr. HAYS. But it is that direct. It is not a vague directive affecting economic stability.

Mr. BATT. No. It is awfully hard to draw a line. I live in the middle of it and half the time I do not know what they are talking about, but I do know that a power plant in the neighborhood for a gun plant is direct armament supporting. There is no doubt about that. When you get to a power plant for a community, of which the armament plant may be only a part, then the thing gets a little hazy.

Mr. HAYS. Yes.

Mr. BATT. But we are trying in the use of this aid for this year to see as nearly as may be possible, that it is related to rearmament or something that is aiding rearmament.

In other words, there are some exceptions in some of the countries like Greece, for instance, that I do not know anything about. But generally in these NATO countries we are trying to see that this money is funneled into the direction that will immediately assist their rearmament.

There is no philanthropic approach to it. Does that meet your point?

Mr. HAYS. Yes, it does exactly; I think there is considerable logic in the economic items. I am not talking about the \$1,673,000,000, but of other items in this bill that are related to defense, such as technical assistance, for example.

Mr. BATT. That is very directly related to rearmament.

Mr. HAYS. Yes. I mean, there is not anything too hazy or too vague about that activity.

Mr. BATT. No. There is nothing philanthropic about that at all. That is very immediate. If you can raise the productive efficiency of a country, while some of that will, of course, go into other things than rearmament, the important byproduct is that your rearmament efficiency is substantially improved.

You take Great Britain. I think there is a sort of revolution going on there. They have increased their productivity or productive efficiency relatively more than any country in the world in the last 4 years. They have been running about 8 percent a year, and that is a big figure. They realize they have fallen hopelessly behind in competition with the rest of the world.

Anyone who wanted to go to Europe and study this particular question I think would be amazed at the enormous difference between the efficiency in Europe and the efficiency in the United States. Any American ought to be very proud of it and ought to be quite sure that he understands where it comes from, and that he does not do anything to hurt it.

These teams we are sending over in the case of Great Britain, that is, the Anglo-American Council on Productivity, are all coming back with the same story. The teams, incidentally, are made up of management and labor. They come back with the same story. They could almost write their report before they leave. They say that production in the United States is two or three times what it is in our particular industry, and these are the reasons why it is. There is a whole host of such reasons. It is no single thing.

It is a matter of education. I would submit if you look at it over a 10-year period you could not use money any better than to change the kind of education they have in most of the countries in Europe, because they are not directed toward increasing the production of things for people. Generally, the people cannot buy the things over

there that they make, and that is the basis for the success of the United States.

Mr. HAYS. That is not only true of industry, but it is true of agriculture. France, for example, has nothing that is comparable to our extension service.

Mr. BARR. No.

Mr. HAYS. Which takes research results and makes them available for general use.

Mr. BARR. Great Britain is the only country in Europe that has, and they are behind us. We have a team over here right now, or if it is not here now it will be in the next month, which is studying the extension service and utilization of the agricultural extension service by American land-grant colleges.

Mr. HAYS. I share some of Mr. Smith's fears about the inequitable distribution of the increased income. I do not know whether you would say gross national product or national income.

Mr. BARR. Your increased national income would be a proper expression, I think.

Mr. HAYS. Yes. But the distribution of it is what bothers me, so that in terms of economic and social conditions you get a more favorable situation.

I judge from your answer that you have shared that fear that not enough has been done in that respect, perhaps.

Mr. BARR. That is right. We understand that situation, Mr. Hays, but we cannot force it. It is the result of hundreds of years. It is a smart Frenchman—and I think Mr. Katz will bear me out on this—it is a smart Frenchman who can raise his prices and cut his wages at the same time. There is a philosophy of management in Europe that is totally different from that which exists in this country.

There are people over there, however, who are beginning to see that they need to have larger markets in order to sustain a larger production, and thus a larger distribution. There are a few people who are doing that, but the matter of price maintenance is not illegal in Europe. That is about the only thing they do get together on, and they get together on that regularly.

Mr. MANSFIELD. Will the gentleman yield?

Mr. HAYS. I yield.

Mr. MANSFIELD. Speaking of a smart Frenchman, I remember not so long ago a smart Frenchman who came to this country and found out how he could increase his productivity and sell his shoes—in this instance he was a shoe manufacturer—for less, and pay his workers more. He got by for a month or two and then the rest of the shoe manufacturers began to make trouble for him, and he was frozen out and could not get credit. He had to go back to the old system.

Mr. BARR. I can understand that. I said to an American distributor who has a big business here and a good reputation for low prices and a substantial plant in Great Britain, "What are your costs over here compared to the United States?" He said, "They are far less than the United States actually." I said, "What are you doing on selling prices?" He said, "I am selling the same as the British market. I could not live over here if I did not."

That is a practical consideration grown men will understand. It will break down in time, and I think it is beginning to break down, but there is no law over there which governs people and keeps them

from getting together and fixing a price. It is considered a fair thing to do that.

Mr. CARNAHAN. Will the gentleman yield for an interruption along that line?

Chairman RICHARDS. Mr. Carnahan.

Mr. CARNAHAN. If we are going to place rather big orders for spare parts and ammunition, such orders are certainly going to be an economic problem in the particular area where those parts are going to be made. Are these orders well enough distributed over the different European countries so that we will not get into quite a misunderstanding because of the fact that one country is getting practically all of the orders, and another one is not getting any?

Mr. BATT. We will put this up to the Defense Production Board and ask them for their recommendation and advice, and we will get out of the Defense Production Board and its international staff, headed by a very capable American, W. R. Herod, who is on leave as president of the International General Electric—we will get out of that staff and the action of the Board, a recommendation for the distribution of that business. We do not have to follow it, of course, but I hope that we will. Then the heat will be taken off the United States for having placed orders in this country in this amount.

Mr. CARNAHAN. Are we not running the risk of throwing the whole European economy out of balance by concentration of such orders? Is it your opinion the orders will be fairly well distributed, or will they be concentrated in certain centers?

Mr. BATT. They should be fairly distributed.

Ambassador KATZ. They will be mostly in three countries—France, Italy, and Belgium.

Mr. BATT. That is right. France will get the largest bulk of them because there is the manufacturing know-how and the idle capacity and a big deficiency there. France is supplying a larger number of men than she is able to supply equipment to support.

Ambassador KATZ. You see, Mr. Carnahan, on your distribution of capacity—and I am talking now of theoretical capacity, as to what the British could make—assuming the labor and materials and financing was there, Britain could roughly do one-seventh of what the United States can do, France one-twelfth, and Italy one-seventeenth, and all the others put together one-twentieth.

So, obviously if you are giving out the orders you place them in accordance with the capacity there, so that you have the program filled. However, you have to watch that from the political viewpoint of what the results will be.

Mr. BATT. We have nine teams who have covered these areas and reported on combat aircraft, small arms and ammunition, artillery, electronics, transport vehicles, combat vehicles, engineering equipment, and so forth. That has been an international study made by this Board, which is international in character. So, we have already gotten a good foundation on which we have begun to rely, because each of the countries has reviewed these reports, and we have their comments; so, we know and have an agreed position on the capacity of each of these countries for each of these things. It will not be difficult to get them under way.

Chairman RICHARDS. Mr. Batt, Mr. Hays has not had his time yet, and I wanted to get along with him.

Mr. HAYS. Yes. As I get it then, the problem is partly a long-range problem. Admittedly, these things must have attention, but not immediately at the expense of a production program.

That is a sound generalization; is it not?

Mr. BATT. I would agree with that.

Mr. HAYS. Again, it is partly to be directed to specific countries and not the whole of Western Europe, as you brought out with your reference to Britain. What you say, for example, with respect to a lag in France would not apply to Belgium, perhaps?

Mr. BATT. There is some idle capacity in Belgium. If you are asking whether Belgium is using as large a percentage of her national production for rearmament as France, I would say that the actual deliveries from Belgium today are larger than those coming from France, but the planned utilization of the budget in France is somewhat ahead of Belgium.

Am I correct in that?

Ambassador KATZ. That is correct.

Mr. HAYS. I understand at the end of the war we had a debit figure with Belgium. We owed Belgium money, in other words.

Mr. BATT. That is right. That is because of the materials we bought out of the Belgian Congo during the war.

Mr. HAYS. That was the Congo production?

Mr. BATT. Yes. Solely that.

Mr. HAYS. On the political side, in Italy, for example, you have a situation that is not general, but a specific political problem? You can hardly quote election results as a test either.

I asked a previous witness why we lost ground in Sicily. The Communists gained in Sicily. They generally lost in Italy, but why did they gain in Sicily?

The report I had was that primarily there was a failure to reach the people there with the story. We have that problem to consider, because actually Sicily should be favorable to the democratic elements in the light of what the democratic nations through the Marshall plan and otherwise have done for them.

Mr. BATT. The chairman told you this is a team, Mr. Hays, and that is not my part of the ball team.

Mr. HAYS. Mr. Ambassador, what about that?

Ambassador SPOFFORD. Referring to Sicily particularly, I think that that is probably a good example of a part of the world where your average voter just does not see enough in it for him. After all, in Sicily there are probably no floors, and the standard of living of the Sicilian peasant is very low, and when he gets this story he is apt to say, "Well, I have been living this way for a couple of thousand years. I do not see anything in it for me one way or another, but I do not like the present system, and I am going to vote against it."

The Communists have capitalized on the feeling of general protest. The Sicilian peasant has about the lowest standard of living, I suppose, of any population group in the whole NATO set-up. I think probably that is why we lost ground there.

Mr. HAYS. I have been pondering the things Mr. Smith is bringing out, and I think it is useful in this discussion. I am simply trying to simplify our problem by expressing my own thoughts about it and inviting comment. My purpose is to distinguish between the

immediate problem and the long-range problem. Certainly we have got to do that.

It seems to me we have to take care that we do not act against our own national interests respecting maximum production simply because there are these irritating problems which we seem to be unable to do anything about. That is the purpose of my question.

Ambassador SPORRORD. I would agree with that analysis and agree with your point of view on it.

Mr. HAYS. I would certainly agree with what Mr. Batt says, that in some cases, after all, it comes very close to being outside our province as a nation. To some extent that is true, too, and that poses a very difficult question for the Congress, because if we are going into an expensive program for the American taxpayers and yet meet frustration because we find the essential difficulties outside our province, then there is some logic in the negative attitude.

Ambassador KATZ. May I make a comment on that?

Mr. HAYS. Yes.

Ambassador KATZ. We are trying to hold Western Europe, and it is under attack by the Soviet Union. That attack follows a number of different channels. I know military officers speak to us about a military plan with a balanced defense, in which Army, Navy, and Air Force are balanced with one another. The Soviet Union has carried its attack way beyond that. They attack production through labor unions, and create economic dislocations and fear. They resort to economic warfare and blockade, like the blockade of Berlin. They resort to guerrilla warfare in Greece. There is no form of device they have not used in attempting to subjugate this continent.

Our job, however, is to hold Western Europe with the aid of the people there. When you are fighting a fight, you try to get realistic military intelligence. What is the fight we are fighting? The realistic military intelligence tells us this about this battlefield:

Right in the middle of the battlefield is France, Germany, and Italy. The people we have to work there with at this time happen to have unstable governments, and to be a confused and divided people. When you get unfavorable battlefield intelligence in an area in which you have to win, you do not say that that is a reason for turning tail and leaving the battlefield. Neither do you say, "I am not going to believe that evidence because I do not like it." What you do is say that is what the situation is, and you ask yourself what you can do about it.

Now, what you can do about it is a very complicated thing.

You fellows know more about politics than any of us. The disappointing vote in Sicily is not due to any one item, but it is due to many things. It is due to many complicated factors. One of the things I will mention is this: The Communists have a highly organized apparatus. I happen to believe you could raise the standard of living in Italy and France to that of the United States and you would still have a Communist problem. It will help a great deal, but you would still have the problem.

There is another part of the job, which is that of beating them at their own game. Take the United States. To a great extent the Communists had infiltrated into the United Electrical Workers Union. What did it mean to eliminate them? It meant we had to fight plant by plant, local by local, and city by city, a dirty, slugging fight, union

by union. That had to be done despite the standard of living in the United States.

So, it is very dangerous to oversimplify this thing. What we have to do from our point of view is to take this area and take the facts, whether we like them or not, and try to change the facts.

Mr. Hays. That is very helpful to me.

I have taken longer than I should, Mr. Chairman, but if I might intrude with one other question I would appreciate it.

Mr. Batt, you said lower wages are offset in cost factors by improved technology in America in many instances.

Mr. BATT. Yes.

Mr. Hays. We want to know before this record is finally completed just what the policies are with reference to determining the items that should be made in Europe and the items that should be made here—at least, we want to have assurance that there are logical formulas used in determining that. We were told, for example, that a bazooka could be made in Europe at one-fifth the cost in America. That was an illustration. I am pretty sure those references were made.

You do find, do you not, with regard to some of these items, that they ought to be made over there?

Mr. BATT. Yes. That is right, Mr. Hays. We work very carefully through the ECA missions in a country, and the MAAG missions, and then through JAMAAG, which is the over-all control of the MAAG missions, and OSR, which is the over-all control of the ECA missions, to bring into the Defense Production Board, of which I am the American member, the best judgments we can get as to the capacities of each of these countries for each of these things.

There is nothing haphazard about that. As I said in the beginning, we start with the knowledge that some of this equipment, which is long-term, ought to be ordered first, even if there is little to show for it in the way of finished production for some time. Then we start with the knowledge that some of this equipment cannot well be manufactured over there.

I would like to say this off the record.

(Discussion off the record.)

Mr. BATT. On the record. We are up against a problem there which you all ought to recognize. We cannot make a commitment to the armies of Europe as to what we are prepared to do for them next year or the year after.

Therefore, the generals, or those responsible for the military direction in the country, will say to us, "All right. We will agree not to make any 50-ton tanks, provided you will agree to furnish us with the heavy tanks 4 years from now." Now, you know we cannot make any such commitment.

They say to us, "You expect us to leave our armies improperly balanced as to equipment and dependent on the good nature of the United States." They will say, "No. We cannot buy that." Therefore, we are under that pressure when we say to them that they should not make a particular thing.

Is that clear?

Mr. Hays. Yes, indeed. Thank you very much.

Mr. CHIPERFIELD. This can be off the record.

(Discussion off the record.)

Chairman RICHARDS. I have two questions. One of them is how tight these figures are on economic aid. You know, people are talking about making it a 2-year program instead of a 1-year program, which means splitting it in half.

The other question is, How about a new organization to handle this thing instead of depending on you gentlemen, even though you love to get together and your personalities do not clash, and you have done a good job. However, why not put all of this under one organization, except for end-items that you have to have from the United States?

What do you think about that? I wish somebody would answer those two questions in just 5 minutes. I mean, each one of them in 5 minutes.

Ambassador KATZ. Do you want me to do that, Mr. Chairman?

Chairman RICHARDS. No. I want whoever wants to to answer the military and economic side of it. I am not talking about the political aspect of it at all, but of the business of operating the program.

Mr. CHIPERFIELD. I might call attention to the fact that Mr. Nelson Rockefeller has advocated one organization.

Chairman RICHARDS. That is right; and a great many other witnesses have testified it could be done, such as Mr. Foster and Mr. Bissell.

Mrs. BOLTON. Would the military accept procurement by the civilians?

Chairman RICHARDS. That is the question I brought up. End items could come from our own production. What you would do with that is another question which, of course, you are not involved in.

From the economic standpoint, I would like to have you tell me about that.

Ambassador KATZ. Do you want me to answer the economic organization question first?

Chairman RICHARDS. Yes. That is right.

Ambassador KATZ. May I speak personally on this, Mr. Richards?

Chairman RICHARDS. Yes.

Ambassador KATZ. This is my personal view, sir.

Chairman RICHARDS. You mean you want it off the record?

Ambassador KATZ. No. I want to explain it.

Chairman RICHARDS. I want your personal opinion.

Ambassador KATZ. It is a view which is based on the limited view of this thing I have had in Europe. There may be all sorts of questions back here I do not know anything about. It is my judgment that a separate organization can administer the economic aid and can administer the military aid subject to certain limitations.

Chairman RICHARDS. On point 2, or scientific aid, I mean, because you are not a specialist on point 4.

Ambassador KATZ. I was going to say the economic aid. I think actually the military assistance and economic assistance could be and should be put within one organization.

Having said that, I would say that in the case of the military end-product assistance it is necessary to handle it in such a way that the Defense Establishment retains responsibility for two primary functions:

First, they have to determine the military requirements. Is this thing really needed?

Secondly, they have to do the actual procurement and handle the physical process of delivery to get the weapons to the forces to which they have been assigned.

Chairman RICHARDS. They do that now.

Ambassador KATZ. Yes. But having said that, I think the military and economic aid could better be administered within a single organization.

I would like to add to that two other facts. As I said to you in Europe, I believe profoundly any aid program should have a definite terminal date and you should not embark upon any indefinite aid program. Maybe you will miscalculate on your terminal date. That is another matter, but I think you should make the best calculation you can of the period within which you ought to get the results, and fix the terminal date, and from that time forward operate against that terminal date.

I would suggest if you set up a separate agency to handle both these things, you should not in the process forget the importance of the terminal date in an aid program.

There is the other thing, which has been brought out by some witnesses, and that is the need to make sure that in the administration of such a program your operation should be harmonized with other foreign-policy objectives of the United States, so as to maintain in substance and practical terms a unified position.

Chairman RICHARDS. If that can be done under the present set-up it can be done under that.

Ambassador KATZ. I happen to believe it can be. In fact, I happen to believe it will be better actually—and this is not in my business, but I am speaking personally—I happen to believe it will be better even from the point of view of the political arm to have it relieved of the day-to-day operating responsibility. That happens to be my point of view, subject to those considerations.

Chairman RICHARDS. You say you have no ax to grind, and as I understand it, you have already resigned. Is that right?

Ambassador KATZ. That is right.

Chairman RICHARDS. And you are not hunting a job?

Ambassador KATZ. No; I am not hunting a job.

Chairman RICHARDS. I wanted that in the record.

Ambassador KATZ. On the tightness of the figures, as I said, no one can pretend these figures are scientifically accurate.

However, I believe this: If you look at the total future requirements of the situation, on any estimate of European availabilities and in any estimate of United States assistance as matters now stand there is a very substantial gap between what you ideally ought to have and what is now projected on the basis of present United States aid levels, and any estimate of European capacity.

I want to emphasize that point, because even if you could get significantly increased European production you would still have a substantial gap.

We have made an estimate of how much higher the Europeans ought to be than they are now, and in terms of physical hardware, which is just as good a practical measure as any, we have estimated they could make in the fiscal year 1952 another billion dollars' worth of hardware. Even if we are wrong, it will only be \$600,000,000 or \$700,000,000 worth of hardware.

The point I want to stress is if we are wrong on that calculation the error is from \$600,000,000 or \$700,000,000, as compared to \$1,000,000,000, or roughly \$200,000,000 or \$300,000,000 worth of hardware. The gap between what we are getting and what we would like to have is very much larger than that.

So I would like to say, Mr. Chairman, even if you trim your military requirements down to an austerity basis, and even if you conduct your military build-up on the most austere basis you can, and even if you get out of these Europeans everything you can get out of them, the aid figures which are projected in this bill and which we are discussing would be probably less than we ought to have ideally.

That does not mean that we should ask for more. In the first place, I think if we did ask for more dollars we would probably not be able to spend them very effectively with the present state of materials in the world. In the second place—and this factor is present here, as in everything else—you make a balanced judgment and consider the effect on the American budget and the American economy. But, speaking for myself, my conscience is completely clear. I believe this is an expenditure which is fully warranted on the basis of a conservative and hard-boiled estimate.

Mr. CHIPERFIELD. Every witness who has been before us talked about the impact on the European countries.

Ambassador KATZ. Yes.

Mr. CHIPERFIELD. We have not had any witness who has talked about the impact on the United States economy.

What consideration have you given to that?

Ambassador KATZ. Of course, in my official capacity I have tried to mind my own business, Mr. Chipersfield. I would not conceal from you, however, that as a citizen that thought sometimes crosses my mind. But may I answer that in the most direct and concrete way I can possibly answer it?

Here is the way I have tried to answer this to myself: There are about 30,000,000 taxpayers in the United States. You take the cost of this whole program—the economic part of it, let us say, is \$1,500,000,000. I will start with that. That means that comes to roughly \$1,500,000,000 into which you divide 30,000,000 taxpayers, which gives you a cost of roughly—

Mr. CHIPERFIELD. It comes to \$56.20 for every man, woman, and child in the United States.

Ambassador KATZ. Let us take the \$56.20 and let us say for those of us at this table we happen to be in an income-tax bracket which would not be \$56. My share might be \$500. Putting it to myself as M. Katz, individually, and M. Katz, United States citizen, I ask myself whether, as between spending \$500 for what this bill gives the United States of America, and spending \$500 on anything else I, or even my wife can think of, would I rather spend that money on one or the other? As far as I am concerned, I would rather spend the \$500 this way.

Mr. CHIPERFIELD. I would too, but what about the economy itself? We will have to have a financial structure that is strong. We cannot break ourselves.

Ambassador KATZ. I completely agree with you. I think it has to be taken into account.

However, Mr. Chipperfield, everyone talks about armament as a diversion from economic progress, and everyone spends his time talking about the question as to whether bread and guns are compatible or not.

I want to go a little further. I want to say to you over any period of time, or let us take a 10-year period, that guns and bread are not only compatible, but you just are not going to have the bread without the guns.

May I be specific? Will you please go off the record on this?

(Discussion off the record.)

Mr. BARR. I want to leave one thought with you, which is purely my own, for what it is worth.

When you talk about cutting this in half and seeing what will happen, I will tell you that you will shock the rearmament recovery of Western Europe beyond belief, because they are just looking for excuses, or enough of them are. They are not looking for evasive excuses, but excuses that satisfy their own conscience for not doing more.

If this Congress in its wisdom says to the rest of the world, "We have decided that this thing is not serious and therefore we are only going to send over half as much stuff as we have been sending," I tell you, Congressmen, you cannot measure the repercussion of it in Europe.

If you just look at dollars expended, we are asking you for \$7,000,000,000 for the NATO area in title I. Indirect aid is not included. An army of roughly 2,000,000 men is being put together and 180,000,000 people are daily being made more willing to be a part of this defense structure. If you start pinching that \$7,000,000,000 very far you are playing, I think, with terrific hazards in the state of mind of these 180,000,000 people, and this army and its equipment.

You cannot cut this appropriation without having an effect on the goods that are going to come out of the United States.

If anybody thinks that cutting it that much means that they will pick it up and do it themselves, they are whistling down a dark alley, because that will not happen.

Chairman RICHARDS. Now, I want to ask you this: We are talking about the possibility of reorganizing this thing. A good many good businessmen who have been employed by the Government think it can be done without injury. There may be injury here and there, but it can be done with over-all success. Here is what bothers me about your end items.

If you leave that out of there, a lot of the end items furnished by the United States are going to depend on the items provided by Europe. A certain amount of economic aid, of course, is to be used to increase that. That is the primary job of most of it. A good bit of it, or, say, one-fifth of it, would be used to increase the production of ammunition and spare parts.

One is related to the other. You put this one over here in the military end entirely, and then you put this other part of the military program over here. If you do that, how are you going to get that synchronized so you get the best out of it? It would be simple to me if it were not for that.

Ambassador KATZ. May I tell you how I see that?

Chairman RICHARDS. Yes.

Ambassador KATZ. I see it this way: Let us say you are dealing with France and there is a computation made concerning the build-up of French forces. That has been made, you see.

Chairman RICHARDS. Yes.

Ambassador KATZ. But the question is, How do you develop the equipment for those forces? You make your best judgment on how much the French can produce and finance themselves.

Chairman RICHARDS. You touched on that.

Ambassador KATZ. Then the French come along and say, "We need help because, having done everything we can possibly do, we are still short." I am assuming they will have done everything they possibly can do.

They then come to the single aid agency and say, "We need help." Here I want to be sure to say something, Mr. Richards, speaking still from my point of view. We talk about military and economic aid. In a sense those titles are not accurate, because military aid really is economic aid, and economic aid really is military aid. What do I mean by that? If you give the French \$2,000,000,000 worth of equipment for their army, to that extent you relieve the French budget and the French economy. If you give the French dollars to buy steel and tools to make tanks, that is military aid.

So the accurate way to look at it is this way: We want this additional build-up which the French can have. For that they need help. How much help can we give them, and in what form can we give it? The judgment as to which form it should be in should be a practical judgment, as to which gets the best result. So we make a calculation that if we give them a certain amount of aid in dollars to buy steel and tools, and so on, they could increase their production by such and such an amount. That is one calculation of how much economic aid there should be.

We also calculate that if we were to give them any more aid in the form of steel and tools, it would not yield a sufficient return in the form of increased French production. So we feel the balance has to be made up of military end-item aid, in our view.

At that point we turn to the military and say, "You fellows have determined the requirements for aiding France, as to whether they need such-and-such a force. On the basis of that force we think the French will be short of equipment by X. We have figured we can cover one-third of X efficiently by giving them steel and tools and other items to increase their own production, but the remaining two-thirds has to be covered by weapons.

"Here you take over from this point and you figure the kind of weapons, and you figure where they should be procured, and take care of the whole process of delivery."

I think that can be tied together in that way.

Chairman RICHARDS. If you are going to do that, why not keep the end-item funds where they are, and then allocate so much? Why can you not say, "Here. We have some money in the United States, and we have to have that much stuff." You could put the whole thing under that one heading.

Ambassador KATZ. It really does not require much more than if you were to take the role of the State Department right now in MDAP and transfer that particular role to a single agency which also admin-

isters the economic aid. Then you will have substantially what I am talking about.

Chairman RICHARDS. End-items and everything else.

Ambassador KATZ. Yes. Even in the case of the State Department the Defense Department still has the responsibility and is given the responsibility for securing military items.

Chairman RICHARDS. It has to say how much can be spared.

Ambassador KATZ. Yes.

Chairman RICHARDS. We have been discussing the end-item business and Mr. Herter, who is certainly one of the best exponents of the aid situation in this Congress, has the idea that with regard to the end-items we ought to say this: Let us give them 15 percent of the production in the United States of this program, or 12 percent, or whatever you are going to make it. Then they will have the same controls as they have now, and all that, but cut that off and put it in a separate department. That would mean, so far as this Congress is concerned, and possibly the Defense Establishment itself, that they would be in the same relationship to that and have the same authority over that that they would with the budget for home defense and the establishment here. It was the thought last year, I think, that part of it should properly go to the Armed Services Committee, dealing with arms aid abroad, and should not come here to this committee.

However, when you do that, you divorce the thing from the composite plan.

Ambassador KATZ. Not only that, Mr. Richards, but it seems to me you divorce your military aid from the build-up of forces. In other words, how do you calculate how many tanks or guns you want to give the French? You do not do that by figuring just the United States production. We estimate the French production, and also it is a question of how many men they can raise, and how long it takes them to train them, and what they have in the way of cadres and officers to train those men. On that basis you have a scheduled build-up of French divisions and you tie your flow of arms to the scheduled build-up of French troops. If that happens to call for 2,000 tanks and your percentage figure applies to United States production happens to be 1,000 tanks, that is just too bad.

Not only that, but here are our fellows working with the French to get this much from them, and the French say it is too much. The French say, "Look here, when we get all of this and get these fellows out on the field, are we going to have the weapons for them?" Our fellows have to be able to say "Yes." That means the flow of weapons has to be scheduled into the flow of French forces.

If you make your flow of weapons dependent on someone's production, there is just no reason to it.

Chairman RICHARDS. What about that, General?

General KIBLER. I think the requirements have to be determined by the Defense Department essentially as they are now, just as Mr. Katz explained it. Otherwise General Eisenhower is not going to have his troops and is not going to have an army to fight with. If you leave with the Defense Department essentially its present functions in this thing with regard to training, in addition to just end-items, I think you could have any number of organizations above that for coordinating end-items.

Chairman RICHARDS. We do not want any number. We want it solidified.

General KILMER. I could be satisfied with our present system. We are about half through this thing and I should not see any reason for changing that.

Mr. CHIPPERFIELD. How about changing the name of ECA?

General KILMER. I think it is important to remember we are half through with this thing and should not change unless essential.

Chairman RICHARDS. We are about through with ECA.

Mr. CHIPPERFIELD. We promised the American people there would be a termination date to this thing.

Chairman RICHARDS. We are going to terminate it.

Mr. CHIPPERFIELD. You heard Mr. Bissell talking about it yesterday.

Chairman RICHARDS. As such, for economic aid for the Marshall plan. The termination date was written in at the start.

You were talking about that, Mr. Katz, and said you think you ought to write it into any program. Of course, you get into a field there that you people do not have anything to do with. There is one phase of this bill which deals with long-time scientific research, and that sort of thing. That is the so-called point 4.

Ambassador KATZ. You can administer that separately. If you put your point 4 in, Mr. Richards, you could provide by statute that those functions that have no terminal date should be administered in a distinct unit under the whole organization, so that when the time comes when you terminate the other functions this thing can be carried on.

Chairman RICHARDS. You could have that in the organization and still not have a terminal date. Is that right?

Ambassador KATZ. Yes.

Mr. CHIPPERFIELD. How about the Export-Import Bank coming into that organization, and the International Bank?

Mr. KATZ. My views on that would be just abstract. I do not know a thing about that.

Chairman RICHARDS. You would say they would have the same relationship to that organization as they have to the others?

Ambassador KATZ. There is a limit to your putting this together. No one in his right mind would suggest that we have a single Department of Domestic Affairs. That is not because they are all unrelated to one another, but because you cannot get more than a certain amount into a single ministry.

If you take the position that everything that deals with foreign countries should get into one organization it will be so unwieldy that no one can administer it.

Mr. CHIPPERFIELD. But when you are giving aid to a country you have to know whether they are getting aid from the Export-Import Bank or the International Bank. You do not want to have duplication there.

Ambassador KATZ. As a practical matter, there has not been any difficulty in keeping ECA and the Export-Import Bank apart.

Chairman RICHARDS. What do you say about having a single agency for the functions we are talking about, Mr. Spofford?

Ambassador SPOFFORD. I think anything we do toward a more effective backstopping of the foreign-aid items is in the right direction.

That is one of the problems we have not worked on, and we have plenty of our own.

Chairman RICHMONDS. You have done a good job.

Bill, what do you think about that?

Mr. BARR. There has been so much said on it, Mr. Chairman. I will personally agree with Mr. Spofford. I am not resigned and in the position that Mr. Katz is in, but I am certainly not tied to this job I have. What is needed is more authority in the hands of the people who are supposed to do things. It seems to us, as we see it over there, that this place is being run by committees, and people spend two-thirds of their time attending committees.

I would like to see the people who are running things here run them without spending so much time clearing with everybody else. We are trying to do that over in Europe. We have a terrible time trying to get answers over here, because by the time they get cleared over here, half the things are done.

Chairman RICHMONDS. Why do you not set up a few more suborganizations? You have a few. Set up a few more subs.

Mr. BARR. I would like to see ISAC with enough authority to operate here, but you have to give those people the stuff to make it possible.

Chairman RICHMONDS. Before we close, how long will you be in town? All of next week?

Ambassador SPOFFORD. I think we will. We are going over to the Senate committee.

Chairman RICHMONDS. If we need you Monday or Tuesday and it does not conflict with that, will you gentlemen be available for a very short time? I do not know, but perhaps some of the others will want to ask you something.

Ambassador KATZ. We would appreciate it if we could get as much notice as possible. I have to go to New York for 1 day.

Chairman RICHMONDS. Mr. Mansfield.

Mr. MANSFIELD. Reverting back to the question raised by Mr. Chipperfield, which has certainly a good deal of merit to it, as to whether or not the people who work on these programs think of the United States as well as the needs of the European countries, I want to say in my opinion I think they do. That is, they have to do it just as we have to do it here.

However, the thought strikes me when we are engaged in a program such as this, which costs a great deal of money, and which I, and I am sure the rest of the committee, have to explain to our constituencies that we represent, I am struck by the idea that what we are doing here is spending money in behalf of the security of the United States. We are spending money in a fight for freedom and a fight for survival.

I think that if people think of this program and realize how much it will cost us in dollars and cents if we lose Western Europe and become isolated, then we are in a position where we have no choice in the matter. This is not just a struggle of a Korea here and a Korea there, but it is a struggle which contains a continuing number of Koreas, and it will be so for some years to come.

So, in my opinion, the money is being spent for a good security purpose.

I want to ask one question of General Kibler. How many divisions do we contemplate having in Europe?

General KIMMER. The United States?

Mr. MANFIELD. Yes.

General KIMMER. Six.

Mr. MANFIELD. Are those six to be in Germany?

General KIMMER. Yes.

Mr. MANFIELD. Is it true then that the troops in Austria and Czech will, in effect, comprise another division?

General KIMMER. That is right.

Mr. MANFIELD. The average American division—and this is just for the record—comprises anywhere from 18,000 to 20,000 men. Is that right? I am just reiterating now.

General KIMMER. Yes. Around that.

Mr. MANFIELD. Exclusive of that 18,000 to 20,000 men in each combat division, how many men do you have backing up each combat division?

General KIMMER. I said a moment ago that our normal theater division slice is 40,000. That means roughly 20,000 behind each division.

Mr. MANFIELD. All right.

Chairman RICHARDS. Wait a minute. You said 20,000?

General KIMMER. Roughly 20,000. That makes a total normal theater division slice of 60,000.

Mr. MANFIELD. You have one man behind one man in a combat unit?

General KIMMER. Yes. That does not include the Air Force but only the Army.

Mr. MANFIELD. The 60,000 is out. This is just the ground back-up of these divisions and exclusive of the 60,000 Air Forces.

General KIMMER. That is right.

Mr. MANFIELD. And that would give us roughly 180,000 men comprising seven divisions, plus another 180,000 behind them. That would be 360,000, plus the 60,000 Air that has been mentioned. We will say, as a round figure, that it would be 420,000.

General KIMMER. Yes.

Mr. MANFIELD. That is all, Mr. Chairman.

General KIMMER. There is something to add to that. When you add the Air and Navy you are not far away from that figure.

Mr. MANFIELD. I have already added the 60,000 figure, but have left out the Navy. I am trying to get this clear in the record because this question is coming up and we will have to get it straightened out.

Chairman RICHARDS. Then with all the necessary component groups, including the Navy, and the communications people, that figure would not be far from that.

General KIMMER. It would not be far from 400,000.

Mrs. BOLTON. May I ask that you have somebody give us the meaning of these "slices," such as the world slice and some other slice? There were three of them?

General KIMMER. Just two. I only know of two. That is enough.

Mrs. BOLTON. I would think so. If we could just have that, or if you would give it to us here. What is the world slice and what does it represent?

General KIMMER. Sixty-five and forty. That is my knowledge of it. I think the Defense Department ought to give that.

Mrs. BORTON. What is the meaning of "world slice"?

General KUTLER. It includes the zone of interior and includes the United States, and everything you have here which is necessary to support an army.

Mrs. BORTON. That is very clear. Thank you.

Ambassador KATZ. I would like to say one thing for the record, that the figures which Mr. Vorys requested with regard to counterpart were handed to Mr. Vorys.

Chairman RICHARDS. That is correct.

The committee stands adjourned until Monday morning at 10 o'clock.

(Whereupon, at 1:10 p. m. the committee adjourned until 10 a. m., Monday, July 30, 1951.)

THE MUTUAL SECURITY PROGRAM

MONDAY, JULY 30, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the House Foreign Affairs Committee room, the Capitol, at 10 a. m., the Honorable James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

Ladies and gentlemen, we will continue the hearings on the so-called Mutual Security Program.

The question was raised, I believe by Mr. Vorys, and some others, a day or two ago concerning General Marshall's statement about the question of sending 400,000 troops to Europe.

I have a letter here from General Marshall on the subject. Without objection, after the clerk has read this letter to the committee, I will put it in the record.

Is there any objection? There being no objection, it will be included in the record.

Mr. CRAWFORD. This is a letter addressed to the Honorable James P. Richards, chairman, House Committee on Foreign Affairs, House of Representatives. It is dated July 28, 1951.

I have been informed that a question has arisen as to the basis for my statement before the Senate Foreign Relations Committee yesterday as follows: "We will have, I think, about 340,000 in Ground Forces, and some 50 or 60,000 in the Air Forces, reference United States military strengths in Europe in 1952."

I want to confirm at this point that the total figure of approximately 400,000 is correct, of which approximately 60,000 will be Air Force personnel.

The 340,000 Ground Force troops represent the approximate total personnel strength of the six divisions reported to the Congress, the necessary "combat support" and "logistic support" troops to maintain, supply, and support these six divisions in combat readiness, the necessary corps and Army headquarters troops, the necessary antiaircraft units for the protection of both ground and air units, and includes also our forces in Austria and Trieste.

The foregoing figures and requirements provide the necessary types of troop units to maintain, both in combat readiness and in combat itself, the six combat divisions. The number of supporting troops per combat division is less than that required in Europe for the support of our combat divisions in World War II.

When the Congress discussed the six divisions, there were already in Europe some 100,000 military personnel.

Faithfully yours,

G. C. MARSHALL.

Chairman RICHARDS. The first witness we have this morning is the Honorable Carlisle Humelsine, Deputy Under Secretary of State. He will testify on the question of salaries and super-grades.

STATEMENT OF HON. CARLISLE HUMELSINE, DEPUTY UNDER SECRETARY OF STATE

Mr. HUMELSINE. I am going to talk, Mr. Chairman, to section 512, subsection (a) and (b), and section 513, on page 56 of the Mutual Security Program.

We are asking for eight top positions to direct and operate this ISAC organizational arrangement.

Section 512(a) is the section that has to do with the Director, International Security Affairs' position. That is a position that is filled by Mr. Cabot at the present time. We are asking for a salary of \$17,500 for that particular position. That is the top position in the ISAC committee. It is in the hierarchy of the executive branch. It is the equivalent of a Deputy Secretary of State.

He is, I would say, in this field the number one man, if you excluded the Secretary of Defense, the Secretary of State, and the head man of the ECA. That is a position covered in section 512.

In section 512, subsection (b), we are asking for four positions at \$15,000 a year. Those positions are for a Deputy Director, Mr. Coolidge holds that position at the present time; an Assistant Director for Policy and Program Development, that is a position held by Mr. Jack Ohly; Assistant to the Secretary of Defense, which is the job in Defense comparable to Mr. Cabot's position in the State Department, and also that is the position of the Defense representative on ISAC. In other words, Mr. Nash wears two hats. He is the Defense representative on ISAC, and he is the man who operates the total program within the Defense Establishment.

The next is the Executive Director of the European Coordinating Committee, Mr. Bonesteel. He is the man that works as the Executive Secretary and Executive Director of the American team over there. The American team is made up of Mr. Spofford, as the United States Deputy of the North Atlantic Treaty arrangements, General Handy, the Defense representative there from the Department of Defense, Mr. Katz the top ECA representative in Europe, and Mr. Batt, the United States member of the NATO Defense Production Board and ECA top man in England.

Mr. GORDON. Has not Mr. Katz resigned already? It was stated in the press.

Mr. HUMELSINE. The 15th of August. I am talking about Mr. Katz as an individual. When he resigns there will be a replacement, presumably, who will have the exact same position.

Then, in addition, under section 513, we have asked for three additional positions in the so-called supergrade structure of the executive branch. Those three would be at the GS-18 level, pay \$14,000 apiece a year.

Those would be for the three assistant directors that we have not covered in the other five positions.

Mrs. BOLTON. They are at what level?

Mr. HUMELSINE. At the GS-18 level. That is the top rating. That is the \$14,000 job. Those would be for the Assistant Director in Charge of Program Management, Mr. John Bell, Assistant Director for European Security and NATO Affairs, Mr. Ernest Pittman, and the Assistant Director for non-European Security Affairs, Mr. Jonathan Bingham.

That is the sum-total of the jobs that we are asking for in the super-grades.

I would be delighted, Mr. Chairman, to answer any questions I could in regard to these positions.

Chairman RICHARDS. Thank you, Mr. Humelsine. You are short and to the point. That is what we want. That is what you are up here to tell us about. Are there any questions? Dr. Eaton.

Mr. EATON. No, I got in too late for questions, although I am startled at hearing of the salary of \$14,000. That beats being a Congressman.

Mr. HUMELSINE. Practically any job, I would say, beats being a Congressman.

Chairman RICHARDS. The witness has just testified that any job beats being a Congressman. Do you agree with that?

Mr. EATON. Sure. From the point of view of profit, permanence, and peace.

Chairman RICHARDS. Mr. Gordon.

Mr. GORDON. Mr. Chairman, this additional help that you are asking for, will they remain here or will they do most of their work in Europe?

Mr. HUMELSINE. They will be here, practically all of them, except Mr. Bonesteel, who will be in Europe. This will be the framework for the ISAC organization; also, the individual that runs the top job in ECA, or whatever would be determined under the act, and the Defense Establishment.

Mr. GORDON. That means it will increase the personnel by how many people?

Mr. HUMELSINE. Under the MDAP Act, we had eight positions filled, but we were paying certain of these \$50 a day as consultants, which is the consultant fee with the Government.

We did not have under the MDAP the type of program that you have under this particular act. Under the MDAP, you were talking about a program that had only to do with military assistance, which was in the neighborhood of \$1 billion. Here you are talking about a program of \$8½ billion. It has to do not only with military assistance, but it has to do with the pulling together of these international security arrangements, I mean, the backstopping of the North Atlantic Treaty Organization, the Organization of American States, and those particular arrangements. It is a different animal from what the MDAP was.

Mr. GORDON. That is all, Mr. Chairman.

Chairman RICHARDS. Mrs. Bolton.

Mrs. BOLTON. Mr. Secretary, what is your sense of this new organization? Do you feel it should be a separate organization? How do you see it set up? How do you see this work done?

Mr. HUMELSINE. I would be pleased to give my own views on that. Actually, I was not prepared to testify to that.

I am afraid I am pretty orthodox in that. I think that the set-up that the administration has asked for here is logical. The reason I think it is logical I would like to set down, if I could, briefly for you. I do not think there is any way of getting away from the following facts: The military character of the aid program is a job for the Defense Department to do. I do not think there is any doubt about that, at least in my mind.

The second fact is that to determine the economic character of the program, and the economic operations, is a job for a single economic agency in the aid field.

I think you have to have something like the ECA, or some such organization, to do that.

But then here in Washington I think you have a real job of coordinating whatever you do.

There are two of the aspects, the defense part, the economic part.

Then you have the overriding consideration of the political, and the total coordination of all three of these things so that we have a program that makes sense, so far as this Government is concerned, and which sees that this money which is appropriated is used wisely.

To coordinate is the job, as I understand it, of the State Department. That is the job set down in the way the executive branch is organized. They are supposed to take care of the foreign policy under the direction of the President. That is what is proposed under ISAC, that in the State Department you set up an operating committee that includes the defense and the economic arm that is decided on for this aid program, along with the responsibilities that normally are handled by the Secretary of State in doing this coordinating.

You keep a small organization, and then you coordinate United States policy there. If you take this thing and put it somewhere else, all you are doing is setting up, at least in my judgment, a second Department of State. If you are going to do that, my suggestion is make it complete enough and then you can move the whole thing kit and caboodle over there.

I do not see any other way to run it except that way, if you are going to follow the premise that the Department of State is the organization that coordinates foreign policy.

I think I ought to emphasize that this ISAC committee is not the committee that is going to run this thing. They are the committee that is going to coordinate it. The defense part is going to be operated by the Defense Department.

Any economic phase that comes up I would assume would be operated by the economic agency, in the same sense that ECA did it. But you still have to have the thing coordinated. We are talking about an organization of about 100 people. That is the total personnel in the office of International Security Affairs in the Department of State. I would say about 30 of those people are tied up in a fiscal operation to make sure that this thing is properly coordinated.

Mr. HERTER. Would Mrs. Bolton yield?

Mrs. BOLTON. Yes, indeed.

Mr. HERTER. You speak of this as a coordinating organization. On the other hand, the money that was appropriated in the last 2 years has been actually expended by that organization, that is, the money is spent by the State Department, so it becomes more than a coordinating agency; in effect, it has control over the funds.

Chairman RICHARDS. When you answer that, I would like to interpose a question on that, if the gentlewoman will yield.

Mr. HUMELINE. Mr. Congressman, as far as the appropriations, I think the appropriations of the funds should be made to the President, and then the President decide where it is wisest to subappro-

priate those funds in order to do the best job in the executive branch of the Government.

In all reality, in the way the Military Assistance Program operated, there were large sums in the breakdown that were given to defense under the MDAP. But in order to have any sense of control to this coordinating committee, the funds virtually had to be there. It would be like trying to coordinate somebody if they had all the money, all the power, and so forth. They are going to tell you to go chase over the hill. You have no authority over them whatsoever. It makes it practically impossible to do a job of coordination.

Chairman RICHARDS. Will you yield?

Mrs. BOLTON. I think my time is up, Mr. Chairman.

Chairman RICHARDS. I will interpose a question there. Granting, of course, that the State Department, under the President, makes policy, policy in Europe, in regard to the Atlantic Pact and the NATO, and all of that, I think that is pretty well defined in all of our minds.

This thing is based on policy. That being the case, why could there not be an independent agency to carry out that policy? If there was an independent agency in ECA to carry out ECA operations, why not an independent agency over the whole thing?

Mr. HUMELSINE. This thing, Mr. Chairman, at least as I visualize it, is beyond anything under the ECA. ECA had one single job to do. It was pretty definitely laid down what they were to do. The guide lines were there. Actually, you do not have all of your policy made. You have your preliminary policy made and your operating policy as far as the present arrangements under the North Atlantic Treaty Organization, as far as Europe goes. But that is a shifting thing. That is going to shift from day to day, as new crises come along.

NATO is in its infancy. It is going to become, I hope, a much stronger thing than it is today. Today it is nothing but laid out on a piece of paper, and the structure over there has but a skeleton staff working in it. There are no forces in being, as such.

You have a long way to go before this is the meaningful thing that I am sure we need in order to carry out our objects of our foreign policy.

If you take and put the defense, put the economic, put all that business in a separate agency, that fellow virtually is going to be a Secretary of State. He is going to be in the position that he is making and has the authority to practically make the decisions.

Chairman RICHARDS. He could not override the President.

Mr. HUMELSINE. No; but you could get such a complication and so much confusion down there, with the President being in the position of coordinating two Secretaries of State, that I think you would have yourself in a fine kettle of fish.

Chairman RICHARDS. How about end items? Do you think they ought to be under this policy—military items?

Mr. HUMELSINE. End items?

Chairman RICHARDS. Yes; tanks, guns, and so forth.

Mr. HUMELSINE. I think that is a defense problem to do.

Chairman RICHARDS. Then that should not be like it is in this bill. Defense makes those decisions, anyway. Why not turn those over to

General Eisenhower that are in this bill, those from our production line, that is, a certain percentage of them. It has been suggested here that this is an over-all program of defense. It has been suggested if a portion is assigned to Europe why not let the military handle it entirely.

Mr. HUMELINE. Largely, under the way it operates now, the military does handle it practically 100 percent, as far as the procuring of that. I think, within the framework of this ISAC committee you ought to keep control of that thing to make sure that as this thing shifts from time to time you can adjust accordingly, as far as the overriding political necessities are concerned.

If you could lay this thing down like General Motors does in laying out their production of cars, and if you only had to worry about what the market was going to be for cars in the United States, then you could go ahead in the program to fill that.

That is one thing. But this thing is shifting all the time. It is not static as the demand for cars is in this particular country.

I heard someone say this morning that we are not operating a thing as simple as a popsicle wagon here. It is not like a fellow taking a very simple business and running it himself. This is a very complex arrangement that has to do with everything that we are doing in the foreign-policy field.

If you take that and put it lock, stock, and barrel outside of any coordinating responsibility of the Secretary of State and the State Department as such, I think you have got yourselves away from the fundamental idea.

Chairman RICHARDS. The economic aid under the Marshall plan was a departure from the foreign policy of the United States. As far as that announced foreign policy to build up the world to combat communism, this Congress wrote into the law it would be an independent agency. That is before some of these other things came into it. I cannot see the distinction.

If you could operate under that, and not have a head-on clash with foreign policy or the State Department, I cannot see why that same theory should not go along the line, unless it does not answer the problem in the military field.

Mr. Herter has arisen the question here about end items from time to time. That is one phase of it, but I am talking about the over-all program of economic relief.

For instance, some of the economic relief is for military production. That blends in from one to the other. I think if this thing worked under ECA, and there was not a head-on clash or conflict with the policy-making end of the Government, I just cannot see why the other will not work.

Mr. HUMELINE. Probably it is an oversimplification, but my general impression of ECA was that you had a very specific job that ECA was going to do, that was that you were going to get European production and the European economy back on its feet after the disaster of the Second World War.

Chairman RICHARDS. Now ECA is going out and you have another job.

Mr. HUMELINE. That was, I think, a relatively simple job, as compared to what we are getting into now. It was a difficult job.

There is no doubt about that. But it was directed toward simple objectives. They were difficult to achieve.

Chairman RICHARDS. I am getting a little away from your particular field. I will call on Mr. Mansfield.

Mr. MANSFIELD. No questions.

Chairman RICHARDS. Mr. Smith.

Mr. SMITH. Mr. Humelsine, what position do you fill down in the Department?

Mr. HUMELSINE. Deputy Under Secretary for Administration, sir.

Mr. SMITH. In that capacity you have the responsibility of considering personnel?

Mr. HUMELSINE. Yes, sir.

Mr. SMITH. How many people are now engaged in this program? How many are employed?

Mr. HUMELSINE. In this particular program?

Mr. SMITH. That is right.

Mr. HUMELSINE. Approximately 100 actually employed in the Office of International Security Affairs.

Mr. SMITH. Here in this country?

Mr. HUMELSINE. Yes, sir.

Mr. SMITH. How many overseas?

Mr. HUMELSINE. About 100 involved in the direction of the program, including the organization under Mr. Spofford. This includes a small staff under Mr. Bonesteel, Executive Director of the ECC.

Mr. SMITH. As you visualize the growth of this particular activity, have you been thinking in terms, or has your Department been thinking of the maximum number of employees required for the over-all program?

Mr. HUMELSINE. As far as the over-all program is concerned in the State Department, I do not visualize for the coordinating responsibility that we have a very large organization. The organization that is going to take care of the economic phase, and the organization that is going to take care of the military phase, as far as getting these things in production and handling the total economic arrangement, that is going to be, I imagine, a sizable staff.

Mr. SMITH. Who would have that information?

Mr. HUMELSINE. I imagine Mr. Foster would have that information, and I imagine Mr. Nash would have that information, as far as Defense is concerned. We do not, as far as State goes.

This ISAC is a coordinating instrumentality. That is exactly what it is. It will not build up into a big organization, unless I am sadly mistaken. That is my understanding. Is that not correct, Mr. Coolidge?

Mr. COOLIDGE. There are no plans for that.

Mr. SMITH. What activities are they coordinating?

Mr. HUMELSINE. Under that, they are coordinating the entire purposes of this particular act.

Mr. SMITH. You mean the whole act?

Mr. HUMELSINE. The whole act, including the four titles, including NATO. NATO will come under title 1. That will be the largest, and the rest.

They will be backstopping Mr. Spofford's organization as the United States Deputy to the North Atlantic Treaty Organization. It

will be centered on this coordinating job, and will not get into the operations per se of the program.

Mr. EFRON. May I say that a letter has gone forward to you this morning outlining all the personnel, both in the United States and overseas, civilian and military, that the Department of Defense has.

Chairman RICHARDS. I think we have that letter here. I was going to put it in the record.

(The documents referred to are as follows:)

Department of Defense employment under Mutual Defense Assistance

	Present	1952 estimate
Military:		
United States.....	239	351
Overseas.....	2,327	3,217
Total.....	2,566	3,571
Civilian:		
United States.....	8,108	7,667
Overseas.....	620	735
Total.....	8,728	8,402

This statement includes only military personnel regularly assigned and civilian personnel regularly employed on a full-time basis for MDAP. The military personnel overseas does not include the members of mobile training teams, which are usually in temporary duty status. The civilian personnel in the United States does not include the labor force employed in the various installations and facilities from time to time in connection with the rehabilitation, repair, and delivery of matériel, or in the manufacture of equipment in Government plants and arsenals. There was an average of approximately 20,000 so employed during fiscal year 1951. The civilian personnel overseas does not include indigenous employees paid from contributed local currency. There was approximately 675 so employed during the greater part of 1951.

OFFICE OF THE SECRETARY OF DEFENSE,
Washington D. C., August 3, 1951.

Hon. JAMES P. RICHARDS,
Chairman, Committee on Foreign Affairs,
House of Representatives.

DEAR MR. RICHARDS: I am attaching for the information of the committee budget estimates and a general statement justifying them, prepared by the Department of Defense for administrative expenses for the Mutual Defense Assistance Program for fiscal year 1952. There is also attached a statement with respect to personnel services in the military assistance advisory groups, together with a breakdown of military and civilian personnel in each of the country missions.

The attachments represent the most complete information as to personnel and administrative expense requirements available to the Department of Defense. We will, of course, be happy to furnish any further information you may require.

Sincerely yours,

EDWARD L. WADDELL, Jr.,
Lieutenant Colonel, OSC, Executive.
(for S. L. Scott,
Major General, United States Army,
Director, Office of Military Assistance).

PERSONNEL SERVICES IN MILITARY ASSISTANCE ADVISORY GROUPS

The general statement in the budget justifications for administrative expenses of the Department of Defense emphasizes that the military assistance advisory groups (MAAG's) are representative of the entire Department and not primarily

of the services. This statement is based on the nature of these advisory groups and the functions they must perform.

Their personnel are not compartmented; the mission of training is one which is performed to some extent by every member of each of these MAAAG's, for example: similarly the checking on utilization of equipment provided is performed as part of the duty of every member of the MAAAG as he carries out his duties related to matériel and training programs. The level of forces, the status of training and effectiveness of utilization of matériel on hand and an estimate of the capacity to utilize additional matériel effectively must all be weighed in developing, screening, and recommending country programs for additional matériel as well as additional training to be financed from United States appropriations for mutual defense assistance.

The statement which follows outlines the duties of the chief of a military assistance advisory group. All of its subordinate personnel are assigned to provide the necessary specialized assistance required to effect the mission of the chief.

The chief of the MAAAG, with appropriate assistance from the ECA Mission chief, is responsible, under the general direction of the chief of the diplomatic mission, for leading and coordinating United States military program efforts within the country and for making appropriate recommendations. He is primarily responsible for furnishing military judgment on all aspects of the program and for:

(a) Advising the military staff of the country government on the initiation and development of requests for aid.

(b) Determining, in accordance with policy and instructions, matériel requirements, and submitting necessary itemized lists of equipment to be included in the country grant aid program.

(c) Directing and assisting in the preparation of requisitions for United States military matériel.

(d) Recommending priorities of receipt of equipment within the limitations of an approved program.

(e) Coordinating proposed military-end-item programs with the ECA Mission to permit elimination of items which can be obtained from other sources, and to serve as a basis for support by ECA of defense programs.

(f) Participating, in cooperation with ECA representatives, in the development of programs for indigenous production.

(g) Receiving United States military matériel and effecting transfer of title to the recipient government.

(h) Advising and assisting the recipient government in the receipt, identification, storage, maintenance, warehousing, and proper use of military supplies and equipment furnished by the United States.

(i) Maintaining supply records showing the status of all approved military programs with respect, particularly, to items not yet requisitioned, items requisitioned but not shipped, items in transit, items received but not yet transferred, and items transferred to the recipient government and making required reports.

(j) Initiating recommendations for the standardization of equipment, training methods and doctrines, and advising in the implementation thereof.

(k) Advising and assisting in the development of approved training programs, and establishing such United States training detachments requested by the country government as are approved by the United States Government. This will include direction of temporary training personnel assigned in accordance with approved policies and programs.

(l) Observing and reporting on the end-use and maintenance of items of equipment furnished.

(m) Reporting on program progress, status of training, the capacity of the local armed forces to utilize the equipment scheduled for shipment, and similar matters.

In a number of countries, particularly Greece, Turkey, Formosa, the Philippines, and Thailand, the military assistance advisory group includes a field training mission with its personnel stationed with, and attached to, troop units of the host nation. In all other military assistance advisory groups, the training function is that stated in the description of the duties of the chief of the military assistance advisory group; performance of training—to the extent that it is performed by United States personnel in these countries—is by mobile training teams (composed almost entirely of military personnel) detached for temporary periods to conduct specific courses at facilities provided by the host nation, whose extra expenses within a country are paid by the host country. The operations func-

tion embraces the whole field of program development, supply, and end-use check—including the receipt of material, and assistance to the recipient country in utilization, storage, and distribution of matériel. With minor exceptions, civilian personnel are primarily stenographic and clerical employees who are United States nationals. A distribution of MAAG personnel complements estimated for 1052 MDAP operations is provided on the attached tables.

Mr. SMITH. I wish we might have that, Mr. Chairman. I think when we were in Paris, we were informed in Paris alone there were 3,400 Americans engaged in all of the activities.

Chairman RICHARDS. I think the distinction he made there was that that was the administrative end of the program, and not in the field; is that right?

Mr. HUMPHREY. That is right.

Mr. REEVE. Would the gentleman yield? Would it be feasible, Mr. Chairman, to have an over-all personnel breakdown which would include ECA and ISAC and MDAP, etc.?

Chairman RICHARDS. I think so. I think we should have it. I was under the impression we had most of that now. If we have not got it, I will assure the gentleman we will get it.

Mr. REECE. Then it would be all together?

Chairman RICHARDS. Yes; and it would show your particular field that you are talking about, Mr. Secretary.

Mr. HUMELSINE. I will see that is prepared and furnished to the committee. I am sure Mr. Cabot has that.

(The information referred to is as follows:)

August 1, 1951.

Memorandum for: Mr. Albert Westphal, House Foreign Affairs Committee staff.

In accordance with our conversation of yesterday, I am forwarding, herewith, the data on MDAP employment in the Department of State. I understand you have already received like data from Defense and ECA and that taken together, these data meet the request of the committee as made to Mr. Humelsine during his testimony on Monday, July 30.

I trust you will see copies of these tables are made available to Mr. Reese.

J. E. MURPHY,

Comptroller, International Security Affairs.

MDAP American Employment as at June 30, 1951

United States:	
Program direction.....	88
Program support ¹	110
Total United States.....	207
Overseas:	
Program direction.....	107
Program support ²	140
Total overseas.....	247
Grand total.....	454

¹ Program support includes positions necessary to absorb the impact of the MDAP on regular department operations. Includes such personnel as account clerks, clerk stenographers, cryptographers, and other personnel in the geographic bureaus required to handle the increased work load generated by the program.

² In most overseas locations, the Department of State provides administrative support in the form of housekeeping services to defense elements in addition to State program personnel.

Chairman RICHARDS. I know we have some. I wish you would see if there is an over-all statement from Mr. Cabot on down through the operations of the set-up that you are talking about, and the administration of the ECA itself.

Is there anything else, Mr. Smith?

Mr. SMITH. I noticed in a release last Friday or Saturday by Mr. Foster that he is discussing changes also in administrative personnel. I was wondering what connection that had with the thing you are talking about.

Mr. HUMELSINE. That is within the framework of his own organization. On this particular organization he has a representative. He has one of the five members of the coordinating set-up. That would be made up of the Defense representative, the State representative, as chairman, Mr. Cabot, and representatives of ECA, the Treasury, and Mr. Harriman's office.

Then this particular organization, this little coordinating organization, 100 people work in effect, for this group within the frame-

work of the State Department, that is in the Office of International Security Affairs.

Mr. SMITH. You said something a moment ago about somebody making mention of the fact that this whole proposition ought not to be considered from the standpoint of a popsicle business.

Is there anybody down in your organization that really feels that Congress is really approaching this matter from that standpoint?

Mr. HUMELSINE. I was not referring to Congress.

Mr. SMITH. You were referring to somebody, and from your remarks I am impressed that they had reference to Congress' approach in this matter.

Mr. HUMELSINE. No, sir. I am sorry if I gave that impression.

Mr. SMITH. That is all, Mr. Chairman.

Chairman RICHARDS. Mr. Carnahan.

Mr. CARNAHAN. No questions.

Chairman RICHARDS. Mr. Herter.

Mr. HERTER. Have I not exhausted my time by breaking in?

Mr. Humelsine, I find myself a little embarrassed because both Mr. Cabot and Mr. Coolidge are close friends of mine and I have the greatest admiration for them, but I am still very confused about this coordinating set-up.

When the ECA set up a regional office in Paris as a coordinating set-up for the European scene it began with a very small office. Today it is much the largest office in Europe. I think with some one-thousand-three-hundred-and-some-odd people in it. It is literally a coordinating office. While it had certain specialists in it that operated for the different missions, it nevertheless started as a coordinating office for Europe, and in effect became a second screening office for everything that was done by every European mission. That would be screened again when it came to Washington. So you had three screening processes.

In order to do that, the OSR kept growing in numbers, and as the work tapered off it continued to stay at its full personnel.

Here you have individuals with the best of intent wanting to hold down the personnel of this coordinating operation, which is also an operating organization. The fellow who controls the funds is the operator. There is no getting away from it. If he wants to put the heat on at any moment he can withhold funds and he, in effect, takes the major responsibility for the operation under that process.

When you are doing that, in order to keep yourself as well informed as all the missions and all the coordinating agencies, the tendency always is to build, and build and build, and you never get away from it when you officially set up a coordinating body of this kind.

I have serious doubt as to whether it is good administration to do this, but I am impressed by your feeling that it is the logical way to go at it. I can understand it would be entirely the logical way to go at it if the State Department were taking primary responsibility for operating all the way, but operation and coordination are two entirely different things.

Mr. HUMELSINE. That is right, and we try to keep those two things distinct.

Mr. HERTER. The fellow who controls the money sooner or later gets into the operation, and you cannot help it.

Mr. HUMELSINE. I do not think history bears you out on that because we have controlled the money as far as the MDAP is concerned. We do not have a great, big organization there built up. We have kept it small. The operation has been done by the military in that field, and I think you have a splendid object lesson there to look at.

Yet, that has been going on for 2 years.

Mr. HERTER. Yet, Mr. Humelsine, the military testified on Friday that the whole operation would be simplified and speeded up tremendously if they had a direct line of responsibility.

Mr. HUMELSINE. It would be speeded up as far as their business is concerned. I admit if you give the money directly to the military, insofar as their particular phase of it is concerned, looking at it from the military standpoint, surely it is going to be speeded up.

If you give money directly to anyone, it is going to be gotten rid of sooner in order probably to get the tanks, guns, and that sort of thing. However, there is more to this particular program than that one facet of it.

We want these things to be pooled together, so that we get our total United States objective out of it. We do not want one fellow running down one road and one fellow running down another road and another fellow running down a third road.

Mrs. KELLY. Will the gentleman yield?

Mr. HERTER. Yes.

Mrs. KELLY. Did I understand you to say that ISAC had full control of MDAP?

Mr. HUMELSINE. That is right.

Mrs. KELLY. I thought ISAC only came into being about 4 months ago?

Mr. HUMELSINE. ISAC came into being about 4 months ago, but it is the successor agency to MDAP. MDAP was limited to the military.

Now, actually, in getting ready for this presentation and in preparing this program to submit to the Congress, the ISAC organization was created, but it still includes the MDAP going concern.

Chairman RICHARDS. Are you through, Mr. Herter?

Mr. HERTER. Yes. Thank you.

Chairman RICHARDS. Mr. Ribicoff.

Mr. RIBICOFF. No questions.

Chairman RICHARDS. Mr. Reece.

Mr. REECE. I do not have any questions, Mr. Chairman, but just a further comment with reference to the personnel breakdown. It would seem to me it would be helpful if that could be broken down so as to show the number of personnel in each one of these phases of the operation, so that when a person looks at it he gets a pretty good picture of what is being required to carry on each phase of the operation.

Mr. HUMELSINE. I think I understand what you are driving at, and I will be glad to get that drawn up. If the chairman would permit, I would like to show it to you first in the draft form to see if we have what you are aiming at.

Mr. REECE. Mr. Chairman, in some meeting of Congressmen I was attending, someone made the suggestion about the overlapping of responsibility or operations of the ECA and the Voice of America in Europe, saying that the ECA is exercising a good deal of responsibility in that field.

I am not sufficiently well advised to know what they were talking about, but they spoke as if we had two pretty well-established voices there. One reached back to the ECA for its responsibility, and the other to the State Department.

Chairman RICHARDS. You will get those?

Mr. HUMELSINE. Yes, sir.

(The information requested is as follows:)

USIE RELATIONSHIP TO ECA

In the field of overseas information, the ECA and the State Department perform different and distinct jobs. Although the ECA uses many of the same techniques and media as the USIE, the division of labor between the two agencies is carefully worked out to avoid overlapping.

The principal distinction is this: ECA supports and defends its program in countries in which it operates and it reports on its activities to the United States. The State Department handles the rest of the United States information program.

In order to insure effective teamwork and to avert duplication, there are regular weekly conferences between the USIE officers and the ECA information officers in all the Marshall-plan countries.

The Department of State and ECA-Washington maintain continued close contact. As our economic and military aid programs change their scope and direction, changes will be made in our information programs to keep them in step and prevent the growth of duplication.

Chairman RICHARDS. Mr. Hays.

Mr. HAYS. No questions.

Chairman RICHARDS. Mrs. Kelly.

Mrs. KELLY. I have just one question.

Is it a requirement for all personnel overseas to be American citizens?

Mr. HUMELSINE. No, ma'am. We employ overseas a certain number of alien employees as support for some of these particular programs. There is a requirement that any officer of any responsibility be an American, and anyone who has access to any classified information has to be an American. We do have certain clerical people and custodial people, chauffeurs, and individuals such as that, who are aliens.

One of the main reasons we do that is from an economy standpoint, because it costs one-fifth as much to hire an alien as an American citizen when you take into account the salaries and the movement of families back and forth, and all the costs incident to keeping an American overseas.

Mrs. KELLY. All administrative positions are held by American citizens?

Mr. HUMELSINE. That is correct.

Mrs. KELLY. That is all, Mr. Chairman.

Chairman RICHARDS. Mr. Lanham.

Mr. LANHAM. No questions.

Chairman RICHARDS. Are there any other questions?

Mr. LANHAM. I might ask if these aliens are checked for loyalty?

Mr. HUMELSINE. Yes, sir. We check them for security.

Mr. LANHAM. I mean security.

Mr. HUMELSINE. Yes, sir. For security, but not for loyalty.

Mr. LANHAM. I meant security. I used the wrong word.

Mr. FULTON. Could I have one question, Mr. Chairman?

Chairman RICHARDS. Yes.

Mr. FULTON. Under section 16 of the Displaced Persons Act of last year, there was an authorization for countries that were overpopulated, for the transfer and emigration of their citizens to underpopulated areas of the world. Has there been any organization set up under the ECA Act by way of personnel to implement that section?

Mr. HUMELSINE. You will have to ask the ECA people on that.

Mr. ALLAN. What was the question?

Mr. FULTON. Will you read the question?

(Whereupon the question by Mr. Fulton was read by the reporter.)

Mr. ALLAN. I know we have some people in ECA in Washington who are actively concerned with that problem, but I do not think there has been a separate organization set up.

Mr. FULTON. Could you get that for us?

Mr. HUMELSINE. I know quite a little of that. We have a Special Assistant to the Secretary in the Department of State, a Mr. Robert West, who is Special Assistant for Migration Problems. His office consists of himself and a secretary. As I understand it, he is working on that field with Government agencies to try to implement that very requirement laid down that you mentioned.

I can get from him, I think, the type of information you are seeking.

Mr. FULTON. Would you please have him submit a statement to us for the record? I ask unanimous consent to put in the record at this point that statement as to the implementation of that section.

Chairman RICHARDS. Without objection, that statement will be forthcoming, you say, Mr. Secretary, and will be placed in the record at the point indicated.

(The information submitted by the Department of State is as follows:)

The Department has been aware of the intent of the Congress to facilitate the movement of surplus manpower from Europe, including persons of German ethnic origin, as expressed in section 115 (e) of the ECA Act of 1948, as amended; section 16 of the Displaced Persons Act of 1948, as amended; paragraph 6, page 87, of the report of a special subcommittee of the Committee on the Judiciary, House of Representatives, No. 1841, Eighty-first Congress, second session; and the statement made on the floor of the House by Congressman Walter, on June 22, 1951, in connection with the extension of the Displaced Persons Act, as amended (Congressional Record, 82d Cong., vol. 97, pp. 7149-7150).

Acting to carry out the intent of the Congress to increase the movement of surplus manpower from Europe, the Department has held a number of informal consultations with other governments and with international organizations on this subject and in this connection has given special attention to developing ways and means of continuing the operation of approximately 12 ships already reconverted for this type of movement, which the International Refugee Organization will relinquish for other services upon its termination before December 31, 1951. A plan of operation has emerged from these conferences involving the continuing use of these ships under other auspices than the IRO in the service of moving surplus manpower from Europe. This plan envisages, in the first instance, the calling of a conference of approximately 20 governments at the earliest possible date, at which time the plan may be submitted for amendment and approval of these governments. The 20 governments would represent countries of emigration, immigration, and certain other countries which have an interest in reducing the pressures of surplus manpower in Europe.

The plan envisages the establishment of a provisional arrangement among these governments, under which the IRO ships will be taken over, as relinquished, for the movement of surplus manpower from Europe which would not otherwise be moved by present unilateral and bilateral arrangements. Estimates based on accumulated experience suggest that 100,000 additional persons could be moved in a full year of operations at a cost of approximately \$30,000,000, covering all administrative, processing, and ocean transport expenditures. Of these costs, \$10,000,000 might come from ECA funds, although the ECA has not taken

this into account in its present request to the Congress for funds; \$10,000,000 from funds of countries of emigration in Europe; and \$10,000,000 from immigrant receiving and other countries concerned with the pressures of population in Europe.

In the light of the expressed interest of other governments in the plan, there is reason to believe that \$20,000,000 of the total funds required for a full year's operation will become available from these governments.

Acceptance of this plan involves a commitment to participate for 1 year by the concerned governments, including the United States, in this provisional arrangement. It is recognized that the maintenance of these shipping facilities in operation will only partly resolve the problem of emigration of the substantial Europe and who desire resettlement opportunities overseas. Feasible plans for the resettlement of larger numbers will be presented to the Congress as they develop. It would seem wasteful and uneconomical to permit these shipping facilities to be disbanded at a time when plans for the movement of larger numbers may emerge. Any commitment of United States participation beyond 1 year in a further migration program, however, will be a matter of later presentation to the Congress. The Department of State is prepared to proceed with this plan to afford facilities to move an additional 100,000 persons provided ECA funds in the amount of \$10,000,000 are assured for this purpose.

Mr. FULTON. Under the ECA Act, as we passed it, there was a section which provided for the discovery of the assets of aliens of the ECA countries in this country and the possible application of those assets toward the program. There was some feeling that various nationals of certain ECA countries, I believe, and also Greece and Turkey, were not sharing the tax burden or the other burdens that should be shared within each country. This is the problem of flight capital.

Could you tell us what the organization is working on implementing that section and what are the results, if any, to date?

Mr. HUMELINE. On that, again, I am not familiar intimately with the organization of the ECA.

Mr. ALLAN. I will see that there is an answer on that.

Mr. FULTON. I ask unanimous consent to put that report in the record on the progress made on that phase.

Chairman RICHARDS. Without objection, that will be done.

(The information requested is as follows:)

UTILIZATION OF ALIEN ASSETS IN CONNECTION WITH FOREIGN-ASSISTANCE PROGRAM

The question has been raised as to what type of organization ECA has established to assist the participating countries in locating, identifying, and putting into appropriate use foreign assets and earnings therefrom located in the United States. The question has also been raised as to how successful participating countries have been in mobilizing these assets.

ECA legislation does not require the agency to establish an administrative staff for the purpose of assisting countries receiving ECA aid in mobilizing the gold and dollar assets of their nationals. However, the United States Government has taken steps to assist such mobilization. These steps were taken by the Foreign Funds Control Division of the Treasury Department in connection with its program of unblocking assets which were blocked during the war. The program involved three principal elements:

1. Public notice was given that at the end of the specified period assets not certified by the foreign governments are free from enemy taint would be transferred to the jurisdiction of the United States Alien Property Custodian.

2. Accounts containing amounts of property, less than \$5,000, were unblocked unless a known amount of enemy interests existed.

3. A new census of assets in the United States held by foreign nationals was taken and the information gained was made available to the governments of the countries receiving United States aid.

It has been argued that the participating countries should pay for a part of the aid program by utilizing their gold and dollar assets in the United States by

liquidating the American investments of their own citizens. In this way it has also been asserted that the liquidation of these assets would constitute a means of relief to the American taxpayer. The ECA consulted on this matter with the National Advisory Council on International Monetary and Financial Problems. The conclusion was reached that it would be unwise for the United States to force the European countries to liquidate their gold and dollar balances in order to finance their dollar costs. This dissipation of gold and dollar balances would add element of instability to the monetary systems of these countries. Moreover, investments in the United States earn an income which can be used to defray part of the cost of European requirements during the life of the program and in subsequent years. To force the liquidation of invested assets would weaken the balance-of-payments positions of the participating countries in the future. Accordingly it was concluded that liquidation of dollar assets should not be a condition to aid under the European recovery program, but that assistance should be given to the participating countries in obtaining control of these assets along the lines indicated above.

Participating countries have taken steps to mobilize assets, additional to the steps taken by the United States. The sections following will describe briefly the various measures taken by the participating countries.

The Austrian Government has required that all foreign assets of its citizens be registered with the Austrian National Bank, and that all earnings therefrom be sold to the national bank. Further information on Austrian foreign assets was made available to the Austrian Government by the United States Alien Property Custodian.

Belgium has sought to integrate the problem of repatriating foreign assets with its general economic policy of free enterprise. By restricting internal credit, the Belgian authorities have induced private holders of foreign assets to repatriate them in substantial amounts, particularly in the early years after the war. This was done without introducing direct controls or surrender requirements. There are no plans to introduce such controls or requirements at present.

Danish laws require that all dollar assets held by Danes must be declared and, except for certain assets, like stocks and bonds, must be repatriated. In case of stocks and bonds, regulations do not require that these be sold, but do require that interest on them must be returned to Denmark.

The French Government has taken measures both to stimulate voluntary repatriation of French capital abroad, and also measures to force such repatriation. These measures, together with the actions of the United States Treasury, referred to above, have resulted in substantial repatriation of French capital. According to figures issued by the French Government during the period February 1-20, 1948, \$112 million of French dollar assets were repatriated, of which \$58 million were in Swiss dossier. As of June 1, 1948, a census of assets in the United States belonging to French nationals indicated holdings totaling about \$59 million.

There are no German national assets in the United States. Such assets were sequestered by the United States at the beginning of World War II, and no foreign investment of any consequence has been permitted Germany in the postwar period.

Under legislation of January 1949 all Greek nationals, not permanently registered abroad, were required to declare all assets held in the United States. Individual holdings, in excess of \$10,000 per person, were required to be reported. In February 1950, legislation required that 20 percent of such assets be transferred and utilized in Greece for the repatriation of the economy. No comprehensive information is presently available on Greek dollar assets. According to the July 1951 issue of International Financial Statistics published by the IMF, dollar exchange in the United States banks owned by Greek businesses and individuals totaled \$6.5 million as of May 31, 1951.

The Icelandic Government has indicated that it does not have information on assets held by its nationals in this country. Such assets are believed to be exceedingly small.

Italian assets in the United States are subject to stringent controls exercised by the Italian Government over all foreign exchange assets. Italian nationals are prohibited from holding Italian assets in this country except for the purpose of enabling business concerns to maintain adequate working balances and except for the so-called 50-percent accounts, i. e. 50 percent of foreign-exchange earnings retained by exporters to retain 50 percent of their receipts in dollars. Holdings in these accounts remain normally at about \$10 million. All Italian long- and

short-term assets in the United States are the property of the Italian Government with the exceptions noted above. The earnings derived from such assets revert to the Italian Government.

The Netherlands Government has taken severe measures to acquire control of the dollar assets of its private citizens. Dollar balances with United States banks were taken over by the Government in exchange for guilders, except for such dollar assets as were required for working needs. Dollar securities must be registered with the Government. In this connection, the assistance of the United States Government referred to above was of great help to the Netherlands Government in uncovering such securities. It is reliably estimated that some \$155 million in dollar assets have been liquidated by the Netherlands in the postwar period.

Norway has very stringent control over the use of foreign currencies. In 1948 the Norwegian Embassy utilized all sources available to it for locating the payment accounts belonging to Norwegian citizens and companies in the United States. Inheritances to Norwegian citizens from the United States must be paid to the Embassy in dollars, and the Norwegian Government in turn disburses the Norwegian kroner equivalent. All countries are required to file a report on their dollar earnings.

Turkish nationals do not hold important amounts of foreign capital. But Turkey has taken several steps lately to tighten up control on export proceeds to prevent circumvention of exchange control, and the illegal accumulation of exchange assets.

Wartime exchange control regulations in the United Kingdom authorized treasury to regulate all foreign exchange transactions, and the Government was given the power to requisition foreign securities in exchange for sterling. During the war period very large amounts of such assets were liquidated in order to finance war costs. The Exchange Control Act of 1947 provided a permanent legislative basis for control of foreign-exchange transactions, but did not renew the power on the part of the Government to requisition foreign assets. However, at the present time all residents of the United Kingdom are obliged to surrender to an authorized dealer all receipts of dollars derived from foreign assets held abroad, in return for which they receive sterling.

Mr. FULTON. Could I make one further explanation on my first previous question?

I refer specifically to the Walter amendment to the ECA bill on the immigration problems of overpopulated States.

Chairman RICHARDS. Thank you very much, Mr. Humelsine. It is good to have you with us again.

Mr. HUMELSINE. Thank you, Mr. Chairman.

Chairman RICHARDS. The next witness is Mr. Casper W. Ooms, consultant to the Secretary of Defense on patent matters.

Mr. Ooms, you have a prepared statement you wish to make, do you not?

STATEMENT OF CASPER W. OOMS, CONSULTANT TO THE SECRETARY OF DEFENSE ON PATENT MATTERS (PATENTS)

Mr. Ooms. I have, Mr. Chairman, and I can hand it in, however, if the committee finds it most useful to have that done.

Chairman RICHARDS. It is a very short statement. Suppose you go ahead and make that statement and see if there are any questions.

Mr. Ooms. I shall do that, Mr. Chairman. I shall not object to any questions that arise even while I am reading the statement. It will not interfere at all.

Mr. Chairman and ladies and gentlemen of the Congress, my name is Casper W. Ooms. I am an attorney with offices in Chicago, where I have specialized in patent law for more than 20 years. From 1945 to 1947 I served as United States Commissioner of Patents. Since that time I have contributed my services on a part-time basis as Chairman

of the Patents Compensation Board of the United States Atomic Energy Commission, as a member of its Patent Advisory Panel, and as patent consultant to various Government departments and offices. I appear here as a consultant to the Office of the Secretary of Defense to render what help I can in respect to section 509 of the mutual security bill (S. 1762).

The inclusion of section 509 in this bill was intended to accomplish several things to improve the efficiency of this program.

1. In the first place, the section would make unmistakable that the use of patented inventions in the advancement of the purposes of the act would be used "by or for the United States" and placed upon the same basis that has been established since 1910 for patented inventions used by or for the United States. Legislation has for more than 40 years provided that the usual remedies, particularly the injunction, of patent owners shall not be available where the invention is used by or for the Government.

The purpose of this legislation has been to prevent the interference with manufacturers of military equipment by injunction, and to prevent numerous suits in scattered places against subcontractors and others who may participate in the manufacture of equipment for the Government. The patent owner retains his full right to damages for any infringement that may occur, but must prosecute his suit directly against the United States in the Court of Claims. Since the United States Government would be ultimately liable anyway, no new burden is placed on the Treasury by this proposal.

In view of the fact that the bill before you provides for assistance to other nations, which may involve procurement directly by them or for them, using United States Government funds, the question immediately arises whether such procurement and the manufacture pursuant thereto, is subject to the normal patent remedies or is subject to the special provisions which have long been effective with respect to manufacture which can be more directly identified with the United States. This section eliminates any such question and merely classifies the activities which this legislation contemplates with manufacture by or for the United States. It involves no change in the patent law and no novel procedure.

2. The second effect of this section would be to group with patented inventions special types of information, secretly kept, such as secret processes, designs, and know-how employed in this program. I am talking about trade secrecy in this connection, not secrecy for reasons of national security. The former type of secret information has always been protected at common law in this country, both by injunction and damages, and section 509 recognizes this, but remits the owner of such information to the single remedy of a suit directly against the United States in the Court of Claims.

It is to be observed that the type of information for which this remedy is provided is carefully specified by section 509 (a) (ii) as—

1. "peculiarly within the knowledge of its owner";
2. "not available to the public"; and
3. "subject to protection as property under recognized principles."

This definition should insure that any disclosure which might have to be paid for under this section will be one upon which there would be an unquestionable right to recover at law.

Further, if the Government or any of its agencies has independently arrived at the information before any disclosure thereof was made to the United States by any claimant under this section, that would constitute a complete defense to such claim. That would meet the situation, which not infrequently arises in the development of weapons, that designs are made or processes developed by our own services and agencies which are not put into immediate use or published, but filed away. Subsequently the need for employment of this information arises and it is put into use. Meanwhile, the same information may have been independently arrived at by an individual who submits it to the Government.

Regardless of the value of the information, obviously the Government should not be required to purchase what it had previously acquired by its own efforts and expense.

This principle has been written into section 509, beginning at line 12 on page 15 of S. 1762 through line 3 on page 16.

I am informed that some apprehension is felt outside the Government over the possible ramifications of putting this language into the law. Since it is intended only to state existing principles as to defenses in suits of this type, it can be deleted without harm.

Section 509 involves no legal novelties. It should encourage the submission of information of this special character, as it is one of the few statutory expressions to give it recognition. In addition, it will enable the Armed Services, which are now in possession of information procured in various ways during the enormous procurement program of World War II, to employ that information in furtherance of this assistance program with assurance that any owner of it is protected in any rights he may have in the information.

The other provisions of the section are conventional. They expressly authorize Government departments and agencies to settle or compromise any claim made under the section, and they contain the usual provision against claims by Government employees arising from the use of inventions or information developed by Government employees. The latter is based entirely on existing law; i. e., section 68 of title 35 of the code.

In brief, this section creates no new liabilities, but does clarify a few questions that might embarrass the procurement under this legislation. Actually, the problem to which the section is addressed is a simple one which should raise no substantial obstacles, but it is one of those intangible difficulties which raise questions in the minds of contractors and the procurement services and thus create a problem. This section should answer those questions and eliminate the problem. For this reason, I believe it should be incorporated into the act.

I should like to add that this proposal has been discussed from time to time with a group of lawyers representing private industry who have been asked to give their advice in this field. They were selected on the advice of the Department of Commerce through the medium of various well-known trade associations. It was they who urged the omission on page 15 that I have already endorsed.

I believe it is accurate to state that, with their help, we have eliminated from this proposal anything that would be opposed by private industry. It must be borne in mind that one of the two chief purposes

of this proposed section is to assure private owners of inventions and know-how of their just compensation. The other purpose, of course, is to further the Mutual Defense Program.

I might say, since I prepared this statement last week it occurred to me that the problem of a statute of limitations from the time when these claims may be submitted has been raised. The usual statute of limitations in patent matters is 6 years. For private litigation, that is quite generous and completely adequate. However, in view of the provisions which are common in Federal legislation that the claims may be administratively determined, and because of the fact that frequently that consumes a great deal of time, it has been proposed in the code which is now pending under the general revision of the Patent Act that the statute of limitations shall be tolled from the time such a claim is administratively presented and answered by the Government.

In other words, the citizen who has the claim should not be penalized by the fact that the claim may take a year or two in processing in one of the Government departments.

Accordingly, with the approval of the various services who have been consulted about this act, I have a brief amendment which I am suggesting to care for that.

Mr. FULTON. Could you restate that again as to when the statute is tolled, specifying the exact time period?

Mr. Ooms. It would be from the time that the claim is first presented to one of the Government bureaus.

Mr. FULTON. Formally?

Mr. Ooms. By a letter. That is considered formal for the presentation of any of these claims. When that first claim is passed upon by the particular bureau. In other words, we want to protect the man against the delays that are natural in the bureau handling of claims of this type. We do not want to give him the opportunity of presenting the claim first to the Defense Department and getting it turned down there in a matter of months, and then going to the Atomic Energy Commission and waiting another few months, and then going somewhere else and repeating the process and filing the same claim repeatedly, and adding in the 6 years provided by statute he has ultimately some 10 years. That is one of the exigencies that the language is designed to protect against.

The presentation of the claim and the time of intervention between its first presentation and its first disposition which will be taken are added to the 6 years, and that alone will toll the statute. Have I made it clear?

Mr. FULTON. Yes, but I wonder if it is compounding confusion by having these people make the claim to a number of departments. While a claimant is held up by those departments probably for a very good reason, that the United States is so busy on defense orders and we cannot take care of those things, the claimant's time runs out. I mean, will this not fool the average citizen?

Mr. Ooms. The thought is that he will present the claim to the service which is most directly involved.

Mr. RIBICOFF. My understanding is just the opposite. This tacks it on and gives him extra time, and does not take it away.

Mr. FULTON. Yes, we know the extra time is given to the claimant, by extending the statutory times. The point I am making is this:

The claimant is probably dealing with the Atomic Energy Commission, the Defense Department, the Army, the Navy, and maybe the Air Force.

Mr. OOMS. Normally not.

Mr. FULTON. But the claimant could be under this system. Then he is refused in one department, but he still is being carried on by the others possibly without any decision.

Mr. RIBICOFF. No. What I understand Mr. Ooms is saying is that the man had a 6-year statute of limitation. He files a claim with the Army, and then no action is taken for a year. That is then tacked on. That is not deducted away from the 6 years.

Is that right?

Mr. OOMS. It is tacked on.

Mr. FULTON. Yes; of course, that is not the question.

Mr. RIBICOFF. It is extra time that he has.

Mr. OOMS. Yes.

Chairman RICHARDS. One man to a witness, please. We will proceed under the 5-minute rule here. I will start at that end of the table.

Mrs. Kelly.

Mrs. KELLY. I have no questions.

Chairman RICHARDS. Mr. Reece.

Mr. REECE. The elimination of this language you suggest on page 3 of your statement would not impede the defense effort in any way, would it?

Mr. OOMS. I think not. It was merely an expression of a recognized defense at law. There may be a few cases that are not in complete agreement with the majority of the decisions, but I am convinced that the expression of the defense in the statute was merely the recognition of an established and widely accepted legal principle; so, it will not be impaired by deletion of the provision.

I might add, I have a copy of the statute here marked up to follow the suggestions I have made in my testimony.

Chairman RICHARDS. Is that all, Mr. Reece?

Mr. REECE. Yes.

Chairman RICHARDS. Mr. Hays.

Mr. HAYS. No questions.

Chairman RICHARDS. Mr. Herter.

Mr. HERTER. Mr. Ooms, how would these suggested amendments affect a situation of this kind that we ran across when we were overseas? We found that the NATO there was trying very hard to get some 155 millimeter howitzers built in both France and Italy. They ran into a situation where they found there were some 1,500 different patents that had been taken out on different parts of that gun as manufactured here, and were unable to get a clearance there so as to allow the foreign manufacturer to start in and get the blueprints and go ahead in making those standard guns.

Would this language of yours simplify this situation?

Mr. OOMS. I think it would, and I think that is just a typical situation to which this provision is addressed.

Mr. HERTER. Is that the kind of situation this is meant to cover, as well as any other?

Mr. Ooms. Exactly. That is very frequently encountered. You do not want to put the small manufacturer, who may be a subcontractor down at the end of the line, to the burden of determining whether he can truly go ahead on behalf of the United States. So what you do is concentrate all of the responsibility in the United States and require a single suit to be brought against the United States by the owner of any of these patents.

Mr. HERTER. Assuming these guns are being made on designs furnished by the United States to a foreign government for its own account, then what happens to the holder of the patent rights?

Mr. Ooms. The holder of the patent rights, unless he had foreign patents corresponding to those in the United States, could do nothing about it. That is, there are no rights. The right of the patent extends only to the borders of our own sovereignty. Unless there were comparable foreign patents, if all the manufacture were done abroad, there would be no patent liability whatsoever.

Mr. HERTER. Even though the particular design which was patented in this country had been given by our Government to another government to operate on?

Mr. Ooms. It would make no difference as far as patent liability is concerned. Once the patent is published in the United States and there are no corresponding foreign patents, that invention may be made anywhere in the world, because the publication of that patent is a book that is circulated throughout the world, and anybody who wants to follow its teachings may do so, and there is no liability.

If the Italian and French manufacturers performed all the work in their own country and there were no corresponding French and Italian patents, there would be no problem at all. But there frequently are corresponding foreign patents and they raise the problem.

If that were procurement for the United States and there were a United States patent and any part of the work was done here which ran into one of the 1,500 patents—although that figure may be a little high—

Mr. HERTER. It sounds a little excessive.

Mr. Ooms (continuing). The suit would have to be brought here in Washington in the Court of Claims against the United States and the work would proceed without any interference.

Chairman RICHARDS. Are you through, Mr. Herter?

Mr. HERTER. Yes.

Chairman RICHARDS. Mr. Ribicoff.

Mr. RIBICOFF. I have no questions.

Chairman RICHARDS. Mr. Fulton.

Mr. FULTON. I do not want to give the impression that anyone at the table believes that tolling the statute cuts down the 6-year period. It does not. It adds to it. However, the question is, if the claim is to be made to one Government department, and then on the date of the decision by that department the statute is tolled and begins to run again from the time of the decision, might not the average person be confused if he is still being held up by other departments without their having made a decision?

I wonder, as a result, if in the statute we should not be definite and have some set-up specifically designating where all claims are

to be made, and where all of this time element is to be worked out. You see what I mean, do you not?

Mr. Ooms. I see what you mean. May I make these few suggestions that arise out of a little familiarity with the program in the field? Usually the man who makes the claim gets to the right department immediately. The bicycling efforts between departments occurs usually on the part of the man who does not have a real claim, and it is not a bona fide claim. He thinks he has, but he does not have one. He mistakenly goes about. But when the claim is presented to one of the services there is usually consultation to determine just where the claim should be presented, and the man is told quite promptly that he has made his claim to the wrong department.

Now, Captain Robillard is here from the defense services, and he has had a great deal of experience with this procurement, and he can go into that further with you, Mr. Fulton.

However, I think that the 6 years, plus the time for handling the first claim, will meet every practical situation which I can think of.

Mr. FULTON. Could I hear your amendment which you propose to meet the particular problem?

Mr. Ooms. Yes. I would be happy to read that. I am going to leave the copy, if I may, and ask that it be incorporated here: The amendment would read as follows—it would be section 509 (e), and it would read as follows:

Except as otherwise provided by law, no recovery shall be had for any infringement of a patent committed more than 6 years prior to the filing of the complaint or counterclaim for infringement in the action, except that the period between the date of receipt by the Government of a written claim under subsection (c) above for compensation for infringement of a patent and the date of mailing by the Government of a notice to the claimant that his claim has been denied shall not be counted as part of the 6 years unless suit is brought before the last-mentioned date.

Mr. FULTON. May I comment on that? Why do you state it as the date of the receipt by the Government of a written claim? Why is it the receipt of the claim by the Government rather than the time of posting or a registered mail notice?

Mr. Ooms. I think the proving of the receipt by the Government records is a much more reliable method of doing it.

Mr. FULTON. With whom have you cleared this particular section 509? Have you cleared it with Westinghouse Electric, United States Steel, Jones & Laughlin, Koopers Co., and others involved?

Mr. Ooms. I would like to submit for the record, if I may, Mr. Chairman, the list of the industry people who have been consulted. They have been consulted on 509 (e) also.

Mr. FULTON. I will ask unanimous consent to put that list in the record.

Mr. GORDON (presiding). Without objection, it will be placed in the record.

(The list referred to is as follows:)

ADVISORY COMMITTEE ON PRODUCTION INFORMATION

At the suggestion of the Department of State, the Department of Commerce invited representatives of a number of well-known associations and manufacturers in industry to participate in discussions on the question of patents and information arising in the Mutual Defense Assistance Program. As a result, the individuals named on the attached list have participated in this Committee.

Advisory Committee on Production Information

Member	Representing—	Membership in other patent associations
Mr. George C. Arvedson, Automobile Manufacturers Association, 320 New Center Bldg., Detroit, Mich.	Automobile Manufacturers Association.	American Patent Law Association, section of American patent, trademark, and copyright law of the American Bar Association.
Mr. F. J. Curtis, Monsanto Chemical Co., 918 16th Street NW., Washington, D. C.	Chemical Industry.	
Mr. J. E. Dickenson, United Engineering & Foundry Co., 943 Duquesne Way, Pittsburgh, Pa.	Engineering equipment industry.	
Mr. J. M. Hadley, Bendix Aviation Corp., 1333 G Street NW., Washington, D. C.	National Security Industrial Association.	
Mr. Martin E. Hogan, Jr., Glenn L. Martin Co., the Glenn L. Martin Co., Baltimore 3, Md.	Aeronautical equipment industry.	American Patent Law Association, section of American patent, trademark and copyright law of the American Bar Association.
Mr. Edward D. Phinney, International Telephone & Telegraph Corp., 67 Broad Street, New York, N. Y.	National Foreign Trade Council.	American Patent Law Association.
Mr. B. E. Shackelford, Radio Corp. of America, 30 Rockefeller Plaza, New York 20, N. Y.	Electronics and electronic equipment industry.	
Mr. F. Gerald Toye, General Electric Corp., Munsey Bldg., Washington 4, D. C.	National Association of Manufacturers.	2d vice president, American Patent Law Association, section of American patent, trademark, and copyright law of the American Bar Association.

Mr. SMITH. There is nothing secret about it, is there?

Mr. Ooms. Oh, no. There is nothing secret about it. They were selected by various associations, such as the National Association of Manufacturers, the Automobile Manufacturers Association, the National Foreign Trade Council, the engineering equipment industry, the aeronautical equipment industry, the electronics and electronic equipment industry, the chemical industry, and the National Security Industrial Association. They took patent men from the large companies, such as United Engineering & Foundry Co. of Pittsburgh, the Glenn L. Martin Co. of Baltimore, RCA, General Electric, Monsanto Chemical Co., Bendix Aviation, and the International Telephone & Telegraph Corp.

Mr. FULTON. What associations of attorneys have approved it?

Mr. Ooms. I do not know.

Mr. FULTON. Any patent associations?

Mr. Ooms. I do not know to what extent they have been consulted. My last meeting was with this group.

Mr. FULTON. Would you submit that for the record later?

Mr. Ooms. I would be happy to.

Mr. FULTON. I have been advised you have taken out section (e) of 509 which is really a protection for Government employees against fine for disclosing of secrets in their necessary duties. It will not submit it here, nor take the time of the committee, but I have a very strong complaint from an industrial company in Pittsburgh concerning what it considers very secret processes involved in a disclosure by Government employees. The complaint covers things they feel are vital to the defense of this country and vital to their company. I can give you that later, if you like.

Mr. GORDON (presiding). Your time is up, Mr. Fulton.

Have you any questions, Mr. Carnahan?

Mr. CARNAHAN. No questions.

Mr. FULTON. Would you yield your time to me for one more question?

Mr. CARNAHAN. I will yield to the gentleman.

Mr. FULTON. The question comes up too on the the use of foreign patents in the defense program. The question comes up, how should we implement that? There is no doubt that under this bill all the patents of United States citizens and United States patents will be open to the program and subject to later suit before the Court of Claims as to determination of the damage done to the individual.

Should we have in this bill some sort of a prior condition which recipient countries should accept, which is a reciprocal arrangement, stating that they too will do as we are doing with our patentees?

Mr. OOMS. May I defer to Mr. Cardozo of the State Department on that? That is being worked on. I have forgotten the name of the documents, but a series of negotiations and agreements are being worked on between the various governments to take care of that situation.

Mr. FULTON. I say that because I think some of our companies would likewise like to have ready access to these foreign patents, which I understand in many cases are being very zealously guarded.

STATEMENT OF MICHAEL H. CARDOZO, ASSISTANT LEGAL ADVISER FOR ECONOMIC AFFAIRS OF THE DEPARTMENT OF STATE

Mr. CARDOZO. I am the assistant legal adviser for economic affairs of the State Department.

In the Mutual Defense Assistance agreements there was a mention of the patent problem, and that subsidiary agreements would be made between the United States and the NATO countries, covering the question of the use of patents and their use in the program. In accordance with that we have started negotiating agreements with all the countries, looking toward the use of patents and patented information for the furtherance of the program.

We have gotten to the point where we have a draft agreement which we are about to submit to the other countries, in order to assure that the program would not be impeded in any way by difficulties in getting patent licenses and know-how, and at the same time protecting the rights of the patent holders and of the originators of the know-how.

One of the problems in this connection has been that once know-how is revealed, there is no way of getting it back and preventing its use in commercial fields. So one of the things we want to be sure of is that when it is revealed for defense purposes the originator of it will be contacted and will get proper compensation if it is used for any other purpose.

Mr. FULTON. Then another point that should be raised is the protection of the United States Treasury as to the amount of the claim allowed to a foreign patentee on a foreign patent, because there may not be the same resistance in the foreign government to the payment of a claim when it can be easily seen the United States taxpayers will do the footing of the bill.

What kind of protection do we have there? Do we have a consent of the United States Government required as to the payment of claims on foreign patents by foreign governments under this program?

Mr. CARDOZO. If you are talking about a patent taken out in the foreign country—

Mr. FULTON. In the foreign country and used in this program.

Mr. CARDOZO. It is very unlikely that the United States would pay anything on that unless the patent holder were an American citizen. In some cases we might pay his claim against the other government for its use of his patent in the Mutual Defense Program. If the patent is in this country and we are using it for production for defense purposes, then the United States Government would be liable to the patent holder. If that patent holder is a foreigner, in some cases, we will ask the other governments to pay him the royalties under that patent.

Mr. FULTON. But we in the United States do not have any say as to how large a payment will be made when we are interested in the amount because of our making up the deficit in the foreign government's military program?

Mr. CARDOZO. If the foreign government pays him they would pay him in local currency and you would not be concerned with the amount that they pay him. If we pay a foreigner who has a patent in this country it would only be in accordance with the rules and standards of how much we would pay any patent holder in this country. If he were not satisfied with what he was offered he would have to sue in the Court of Claims and get his regular allowance.

Mr. GORDON (presiding). Your time is up, Mr. Fulton.

Mr. FULTON. Mr. Chairman, could I finish with this?

Could you submit to us either a form of amendment to protect that situation, or give it to us in the form of a paragraph or two that should be put in the report to settle that question, because that would be immediately questioned by businessmen in some of our industrial areas.

Mr. CARDOZO. Yes, sir.

Mr. FULTON. Thank you very much.

Mr. RIBICOFF. I have a question. That is not to be the policy, is it? I assume the committee will have an opportunity to pass on what Mr. Fulton's suggested amendment is.

Mr. FULTON. Of course. They are just submitting a form for our study.

(The information, supplied by the Department of State, is as follows:)

Mr. Fulton asked what measures were being taken to protect the United States Treasury from claims by foreign nationals in case the other governments are not as careful to defend against such claims as the United States. It must be emphasized that the United States Government has not undertaken to indemnify the other governments against claims filed against them arising out of the use of patented inventions and information. In some selected cases, the United States may pay the claims of American nationals against other governments, when such claims are based on foreign patents used in the Mutual Defense Program. In such cases, the transactions will be carefully scrutinized in order to assure that no more than the necessary amount will be paid. Some experience in this field was gained in World War II and no difficulty was encountered in protecting the interests of the United States when such claims were paid.

Mr. GORDON (presiding). Mr. Smith.

Mr. SMITH. Did much of this develop in World War II?

Mr. OOMS. Considering the size of our procurement, I would say it was a trifling amount. I do not know the amount of claims pending

now in the Court of Claims, but it is very small considering our activities.

Captain ROBILLARD. It is very small.

Mr. SMITH. What would be the particular need to throw in these safeguards such as you are proposing now?

What I am worrying about now is not the big fellow whose rights might be trespassed on, but the little fellow who has a very little patent claim, and what he is getting here is a good lawsuit. In the time it takes to adjudicate these matters in the Federal court he might be dead and buried and his heirs might still be in court. There is no relief from that kind of situation, is there, for the smaller concerns or individuals?

Mr. OOMS. No. There is not, excepting just the general improvement. There has been a very marked improvement in the handling of these claims in the Court of Claims. They are moving through right along. There is no relief any other way. That is, if a small manufacturer had a suit against a contractor or subcontractor way down the line in this procurement line he would encounter the same delays.

I would question, if it were shown the procurement were for the United States, if any court would issue an injunction. The matter of determining liability would take just as long in the district courts throughout the country as it would in the Court of Claims.

Mr. SMITH. Would it be advisable, do you think, in this legislation to set up some kind of mediation board?

Mr. OOMS. I think it would. Not in this legislation, Mr. Smith. The purpose here is too limited. There is a movement under way now to set up an Inventors Award Commission that will have a much more extensive jurisdiction over all of these types of problems. They are recommending it in almost every type of legislation you get for military procurement.

Our present situation has been a patchwork one, which should be met by just such a commission as you contemplate, which would have jurisdiction over this type of thing.

We have a small one in the Atomic Energy Commission. It has been running now for 4 years, and there have been only 10 claims filed, 7 of which have been disposed of. Three of us are sitting on the board. Two of the men are leading industrialists, and I happen to be an attorney. We donated our services. They are getting along very well. That could be done on a much broader basis, but I think to put that specialized type of thing into this legislation would be a mistake.

Mr. SMITH. That is all. Thank you.

Mr. GORDON (presiding). Mrs. Bolton.

Mrs. BOLTON. No questions.

Mr. GORDON (presiding). Mr. Javits.

Mr. JAVITS. Thank you, Mr. Chairman. I have no questions at this point.

Mr. GORDON (presiding). You may ask a further question, Mr. Fulton.

Mr. FULTON. The set-up in World War II had some sort of an agency where inventors put their ideas in. That was a quasi-Government agency. What was that?

Mr. OOMS. The National Inventors Council, Mr. Fulton.

Mr. FULTON. And the inventors would write in to that National Inventors Council during World War II, would they not?

Mr. OOMS. That is correct.

Mr. FULTON. That would be a Government agency to the inventor, would it not?

Mr. OOMS. It was, except that it was completely manned, with the exception of a half a dozen service people and the Commissioner of Patents—it was completely manned by industrial representatives, such as Charles Kettering, of General Motors; and Zeder, of Chrysler; and Coolidge, of General Electric; and a group of that type of men.

Mr. FULTON. Is there any similar agency for this defense production program?

Mr. OOMS. That same agency has been continued. It has been given some encouragement and is being revived for this purpose. It is continued on a stand-by basis, but it is now being recognized and reestablished for this purpose as well as all other purposes.

Mr. FULTON. When the inventor under this defense program writes in to this agency, stating what his invention is, will that be considered an appropriate Government agency for making a record for him or making a decision?

Suppose he writes into that agency and it is 4 or 5 months before they make a decision as to whether they like it or not? Is the inventor's time for filing his suit then tolled for the amount of time that this agency takes to make a decision?

Mr. OOMS. No. He has not at that time made any claims. There has been no controversy at that stage. He has merely submitted an idea. If it is an idea that the United States has begun to use and has procured from him, his time is running, and I think if he files a claim at any time that would toll the statute for that purpose, even though the claim were filed with the National Inventors Council. It is a Government Agency.

Mr. FULTON. That is what I wanted to get. How does this agency definition affect the tolling of the statute of limitations on the filing of the claim by the inventor?

Mr. OOMS. The proposed section, 509 (e), merely says, "Receipt by the Government of a written claim." The National Inventors Council is a governmental agency. You people make the appropriations for maintaining it.

Mr. JAVITS. Will the gentleman yield?

Mr. FULTON. I yield.

Mr. JAVITS. Would the record show as a completion of that question the statutory authority for that organization? I happen to know a good deal about the National Inventors Council because I dealt with it during the war as an officer in the Chemical Corps, and they were very good and very useful.

Mr. OOMS. I would be happy to provide that.

Mr. JAVITS. So that we are all sure that is so. I remember there was some doubt about that. It was supposedly just a tolerated affiliate of the Department of Commerce, as I recall it. I think the record ought to show some substantiation for your statement that it is a Government agency, that is, some Executive order or statutory authority.

Mr. GORDON (presiding). Without objection, it will be placed in the record.

(The information requested is as follows:)

NATIONAL INVENTORS COUNCIL

The National Inventors Council is described in the United States Government Organization Manual in the following terms:

"The National Inventors Council was created in August 1940, by the Secretary of Commerce with the concurrence of the President of the United States, to receive, evaluate, and pass on to appropriate branches of the armed services all inventions, inventive ideas, and new products and processes submitted by the public as a contribution to the war effort. It works in collaboration with the Army and Navy. Existing Army regulations require that all inventions submitted by the general public through the Department of the Army should be referred first to the Council.

"The Council embraces in its membership noted inventors, industrialists (experienced in the development of inventions), and public officials, including representatives of the Army and Navy."

In addition, by a letter to the Chairman of the National Inventors Council dated March 20, 1951, the Secretary of Commerce has delegated to the Council his responsibility under section 4 of Public Law 776, approved September 9, 1950, which reads as follows:

"The Secretary is directed to refer to the armed services all scientific or technical information, coming to his attention, which he deems to have an immediate or potential practical military value or significance, and to refer to the heads of other Government agencies such scientific or technical information as relates to activities within the primary responsibility of such agencies."

The expenses of the Council are paid out of funds of the Office of Technical Services of the Department of Commerce.

Mr. FULTON. Could I finish that line of questions? This is really important to us in Pittsburgh and it is the thing we are interested in. I think we are developing something of interest to the business people. It is important to those of us who are interested in these property and business rights.

Section 509 (e), as originally submitted, which deals with the protection of Government officers and agents against fine for the disclosure of necessary information in the course of their duties, has been deleted. Why?

Mr. CARDOZO. May I answer that?

Mr. GORDON (presiding). Yes, Mr. Cardozo.

Mr. CARDOZO. When we were working on the drafting of this provision we understood that a great many officers and employees of the service departments primarily were greatly concerned because they were unable to communicate know-how in the possession of the Defense Department to manufacturers and the like, for fear that if they communicated that information they would be subject to the penalty of the existing statute, which is a criminal law, 18 United States Code 1005. That law is so broad that it looked as though if they got any information in any way in the course of their work, even if it were not confidential information, they would not be able to pass it on.

So this provision was drafted in order to see that this program would not be impeded because those people would be unable to communicate the information. On further study of the section as to the history of it and the like, the conclusion was reached that they should not be concerned about the application of that law in connection with legitimate communication of information in the course of their employment.

Consequently, we concluded that if there was no improper action on their part and they were acting in the course of their employment,

that they would not be subject to criminal penalties. They are being advised in that sense, and therefore this section has been deleted.

We have made a suggestion to both committees that it be taken out. One reason for that is that as drafted this section in itself was too broad, going in the other direction, so we feel we do not need any such section.

Mr. FULTON. Could I state a situation then which raises bitter complaints and leaves people who are contractors in the defense program pretty much at sea. That situation is this: When the contractor feels—and he is a very loyal citizen in feeling it—that certain officers and agents of the Government are going clear beyond the scope of their duties, or are simply careless or thoughtless in disclosing vital information, then what can he do to stop it? I have a very large company with a very important officer in it writing to me as a Congressman, saying, "This is greatly interfering with our war effort, and if this disclosure continues we just supply information to foreign people who would be very anxious to get it."

How does the particular contractor, as a matter of implementation under this section, get a chance to state his claim? Could I ask the witness that? It seems to me deficient from the point of view of the patriotic American contractor unless he has some place to go to put his claim in that there is wrongful disclosure.

Mr. Ooms. I think, Mr. Fulton, that the language of this section 509—

Mr. FULTON. What subsection?

Mr. Ooms. (b) would cover that situation if he had secret information that was employed by others in pursuance of the military program. If he is damaged by that he can recover under 509 (b) (2).

Mr. FULTON. That is for his damages, but he wants to stop the disclosure from occurring rather than to get damages. As I said, he is a patriotic American and he will in this case not be interested to take damages. He just does not want the information disclosed and he has no place to go to stop it. Here he is on the end of a rope with no knot, seeing the disclosures made because he has started to disclose and then finds there is an irresponsibility that he thinks will endanger our country.

Is there any place he can go to complain, or can he get an injunction against such disclosure?

Mr. Ooms. I doubt that he can get an injunction, but the military services, I am sure, would be happy—not happy, but they would be receptive to any complaint of that character because it violates every tenet they have over there. It discourages the submission of very much needed information if it is freely passed out, contrary to regulations and contrary to the purposes for which it is submitted.

Captain Robillard, with his long experience, would be able to answer that. I suggest that not to dodge the question, because I think that that man, if his facts are correct, has a very proper complaint which the services will receive and attend to immediately, because it is a very discouraging thing in the procurement services.

Mr. FULTON. In this particular case the contractor is obviously not getting the results it thinks are necessary for the security of the United States.

Would it be possible to have such an agency set up in the mutual defense program that is on a policy level and over and above the

organization and administration level, where if a dispute occurred on the lower levels, or within an organization or between organizations in the defense program, that there is some place where you can have such a policy decision made?

Mr. Ooms. I am sure it could be done.

Captain ROBILLARD. May I answer that, sir?

Mr. FULTON. Yes; I would be glad to have your answer.

Captain ROBILLARD. Every contractor has the right of appeal to the contracting officer, and from there to the Secretary of the particular service. I am quite sure that if he followed it he would have no difficulty. As a policy—and a very strong policy in the Navy, and I understand it is so in the other two services—we do not disclose any information of any manufacturer without permission of that manufacturer. Unfortunately, there will be times when it gets out, but when you take the number of people and the amount of information we handle it is a little difficult to prevent altogether. The Navy Regulations 1265—

Mr. FULTON. I have no complaint as to the Navy, possibly because I was in it, but I will submit this case to you later rather than take the time of the committee.

Mr. Ooms. Mr. Chairman, may I leave with you the marked-up statute of the section which contains the changes I have discussed, and also the list of industrial representatives and the associations at whose behest they were respectively consulted with respect to the legislation?

Mr. GORDON (presiding). I want to thank you for your appearance this morning.

Our next witness this morning is Captain Robillard. Do you have a prepared statement, Captain?

STATEMENT OF CAPT. GEORGE N. ROBILLARD, UNITED STATES NAVY, ASSISTANT CHIEF OF NAVAL RESEARCH FOR PATENTS AND PATENT COUNSEL FOR THE NAVY

Captain ROBILLARD. Unfortunately, I do not have enough copies to go around.

I am Capt. George N. Robillard, patent counsel for the Navy and appearing for the Department of Defense. May I say here that the similarity between my own and Mr. Ooms' statement is purely coincidental. We did not exchange notes until we got into this room this morning.

If the committee please, my remarks will be directed solely to section 509. The primary purpose of this section is to vest the Court of Claims with jurisdiction, when in connection with the furnishing of military assistance in furtherance of the purposes of this Act—

(a) infringement of a United States patent occurs; or

(b) an owner of proprietary information is damaged by the disclosure of the information by reason of acts of the United States or its officers or its employees.

In either instance, the remedy of the owner shall be by suit against the United States in the Court of Claims for reasonable and entire compensation.

The Department of Defense considers it essential that such jurisdiction be vested in the Court of Claims, in order to assure an uninterrupted flow of materials for the purpose of military assistance.

Considering patent infringement, the Court of Claims presently has jurisdiction when the infringement is by the United States, or by those acting for the United States. The controlling statute is 28 United States Code 1498 but the court has had jurisdiction for acts of patent infringement by the United States since 1910. In 1918 the jurisdiction was broadened to include acts of infringement by those contracting with the United States. The purpose of broadening the jurisdiction was to prevent a patent owner from bringing suit in a district court against a contractor with the Government, obtaining an injunction, and thus prevent the flow of essential materials to the Government.

For the purposes of military assistance it is not only necessary to prevent any stoppage in the flow of materials to the United States, but necessary to prevent any stoppage in the flow of materials to our allies. In many instances, materials for our allies will not be purchased directly by the United States and in the absence of this legislation a patent owner could enjoin a manufacturer from supplying the materials if patent infringement exists.

This provision will deprive a patent owner of the right to obtain an injunction and limit him to a money recovery. Balanced against this is the fact that manufacturers may be encouraged to enter into military defense production because they will not be faced with patent litigation.

For the reasons set forth, it is strongly recommended that the Court of Claims be given this additional jurisdiction in patent cases.

In addition to vesting the Court of Claims with jurisdiction when patent infringement occurs, this section will also give the court jurisdiction when an owner of proprietary information has been damaged by disclosure of the information by reason of acts of the United States, its officers or employees.

That the owner of proprietary information has a right of action against a recipient of that information who has used it without the owner's consent, is well established in the State courts. At least one Court of Claims case (*Patton v. United States*, 110 Ct. Clms. 195) implies that an owner of information also has right of action against the United States, if the owner can establish an express or implied contract.

In many instances the information constitutes the manufacturer's know-how. At times, such as when replacement of existing material or parts thereof is required, it is absolutely essential to have the manufacturer's know-how in order that the tolerances and other technical features be identical in the replacements.

The United States has in its possession volumes of such know-how. It has been acquired in many ways. Some of it has been voluntarily submitted; other has been submitted in conjunction with invitations to bid; and much of it has been acquired under research and development contracts. When acquired under research and development contracts the United States has a right to disseminate it, but it does not have such right in all instances.

It has been the policy, generally, to obtain the consent of the owner of the know-how prior to its transmission, but there are instances when

time does not permit, and other instances where an accurate determination as to who the owner is cannot be made. Without consent of the owner there is an understandable reluctance on the part of officials and employees of the defense departments to disclose the information to other sources. It is believed that this reluctance could be swept away and that manufacturers and others would be much freer in providing know-how if they were to be made whole for any damage resulting from the transmission of that know-how.

The purpose of establishing an affirmative remedy in the Court of Claims is to give the owners assurance that if they are damaged they shall have the right to seek reasonable and entire compensation. For the reasons given it is strongly recommended that this remedy be established as an affirmative part of the law.

In providing the Court of Claims with additional jurisdiction, section 509 further provides, beginning at page 15, line 9, that—

In any such suit the United States may avail itself of any and all defense, general or special, that might be pleaded in a like motion.

This has always been true with respect to patent litigation and prior to the codification in 28 U. S. C. 1498 like language was used in the earlier statute. Upon codification, this language was omitted, the reviser's note stating:

In the absence of statutory restriction, any defense available to a private party is equally available to the United States.

The inclusion of the above language therefore appears to be a matter of choice; it does make the act more explicit, and for that reason it may be desirable.

The above language establishing defenses runs to both patent cases and those based on disclosure of information, but beginning at line 12, on page 15, there is spelled out a defense running only to suits for damages for use or disclosure of information. This defense, in brief, provides that if the United States already has the information in its files it shall be a complete defense for the Government, provided—

(a) it has a date prior to the disclosure by the owner of the information;

(b) it constitutes sufficient description of the information; and

(c) the information has not been obtained directly or indirectly from the owner.

The reason for spelling out this defense arises because of conflicting opinions in the courts as to whether or not a defendant in an action of this kind may show that the information was in fact old at the time of receipt. Some courts have held that the recipient may show that the information is old and thus the recipient is relieved from liability, even though he uses the information. Other decisions have held that, if the information is new to the recipient and he uses it, he is liable on the doctrine of an unjust enrichment, even though he is able to establish the information was in fact old.

Despite the uncertainty as to what defense a recipient may raise, in order to avoid liability, one writer who has made a broad study of the subject reached the following conclusion:

If the receiver had the submitted idea in his possession prior to the submission, he receives nothing of value, and an obligation to pay will not be implied or imposed by law (vol. XXIX, No. 3, Journal of Patent Office Society, p. 161 (March 1947)).

If this conclusion is correct, then this part of section 509 is nothing more than a codification of existing law. However, if it is not correct, this bill will enact into law a special defense for the benefit of the United States.

As the Defense Department considers that the conclusion is correct, it does not, if there be any doubts, wish to press for inclusion of the defense. If the defense is a proper one, it will be available to the United States just as all other defenses are, whether or not it is spelled out in the act.

Turning now to section 509 (c), this section gives to department heads the authority to settle any claims arising out of patent infringement or information disclosure, provided the claim is submitted prior to bringing of suit in the Court of Claims. The agencies presently have authority to settle claims for patent infringement under 35 U. S. C. 91, when the infringement is by or for the United States.

The authority to consider a claim of this type administratively is highly desirable. The procedure enables the Department of Defense to retain control over a matter which was developed by its action, and further enables a determination by personnel having intimate knowledge of the situation. If the matter be classified, the claimant must await the removal of security before proceeding in the Court of Claims, and thus, although having a remedy, he may not invoke it. When suit is initiated, not only is the time of the agency involved consumed but also that of the Department of Justice. By providing for administrative compromise and settlement of claims, the over-all cost of determining the existence of Government liability is reduced, both from the Government's standpoint and that of the claimant.

Section 509 (d) excludes an employee of the United States or his assignees from bringing suit under the provisions of this act while he is in the employment or service of the United States or on any information or invention discovered, invented, or developed while in the employment of the United States. This exclusionary provision is found in 28 U. S. C. 1498, and has been in the law since 1910.

The next page and a half does nothing more than restate the amendment which Mr. Ooms suggested. I might say that that amendment originated in the Department of Defense. That is the tolling of the statute of limitations and was first proposed in the codification of the patent laws. I do not think there is any need to reread it, and it can be incorporated in the record.

Mr. GORDON (presiding). Without objection, the balance of your statement may be placed in the record.

(The balance of Captain Robillard's statement is as follows:)

It is suggested that one further provision be added to section 509, as subsection (e) thereof. This provision should read as follows:

"Except as otherwise provided by law, no recovery shall be had for any infringement of a patent committed more than six years prior to the filing of the complaint or counterclaim for infringement in the action, except that the period between the date of receipt by the Government of a written claim under subsection (c) above, for compensation for infringement of a patent and the date of mailing by the Government of a notice to the claimant that his claim has been denied, shall not be counted as part of the six years, unless suit is brought before the last-mentioned date."

Under 35 U. S. C. 70, if a claimant, wishing to take advantage of the administrative settlement of his claim, files a claim and more than 6 years elapses from date of first use and denial of the claim, he loses the right to recover compensation for the period of time in excess of 6 years. Assuming that a claim is

denied 2 years after it is submitted, and first use was 5 years prior to the filing of the claim, then the claimant has lost the right to recover compensation for a 1-year period should he be successful in the Court of Claims. The claimant cannot maintain this action in the Court of Claims concurrently with the administrative claim, since filing of the action in the Court of Claims would divest the administrative agency of jurisdiction.

In view of the foregoing, it appears that it would be in the best interests of the Government and equitable to the claimant to provide a tolling of the time a claim is being administratively considered.

Summing up, the Department of Defense supports and recommends approval of section 509, but would not press for inclusion of the special defense running to disclosure of information.

Mr. GORDON (presiding). We will proceed under the 5-minute rule.

Mr. Judd.

Mr. Judd. I want to ask this question, which is a little off the line, for my own information, because I have often wondered about it.

Suppose in the war some weapon of ours is captured by the enemy. Let us say it contains some device developed from a privately owned secret patent, and the enemy, or maybe even an ally, gets it and duplicates it. Does the owner of that patent have any recourse?

Captain ROBILLARD. In the foreign country?

Mr. Judd. Suppose it is an American patent, but the British or Russians get it.

Captain ROBILLARD. He has recourse against us.

Mr. Judd. Against us?

Captain ROBILLARD. Yes, sir.

Mr. Judd. Because it was through the action of the United States by being at war with that country or giving them something through lend-lease or MDAP that they got the secret?

Captain ROBILLARD. No, sir. He would not have any action against us if, for example, there was something like that happened during the last war, when the Norden bombsight was compromised. Of course, if the Japanese went on to build it, there would be no recourse against the United States Government if the Japanese got it. His only recourse against us would be for our making use of it. If the Japanese went ahead and made it and used it, he would not have any recourse against us, but if there was Japanese patent he could sue the Japanese.

Mr. Judd. For example, the cruiser *Milwaukee* was lend-leased to Russia. I am told it had on it every secret and latest model weapon the United States Navy had. Obviously, the Russians got all of them. I do not know whether any of the late-model secret weapons were built under private patents or not, but suppose they were and the Russians came out with a bombsight, or something of commercial value, that they got through this cruiser *Milwaukee* lend-lease deal. Of course, after the war they will make it in commercial quantities and sell it, and in that way the patent owner has been deprived of some of his proper rights by this action of the United States.

Captain ROBILLARD. I would say he has no remedy because, by the same token, if the Russians came here and bought the same thing off a shelf somewhere they could go back to Russia and manufacture it without any liability. Just because we happened to give it to them does not change it too much.

Mr. CARDOZO. I would like to add something to that, if I could.

Mr. GORDON (presiding). Mr. Cardozo.

Mr. CARDOZO. There is a good deal of history which is going on with the Russians at the present time on that. In all the master lend-lease agreements there were provisions that the other country would protect the rights of Americans who had patents in articles that were transferred. Drawing on that provisions and other agreements with the Russians, we have asked them to pay to the holders of patents in American companies, or oil refineries, that were transferred to the Russians under lend-lease. Interestingly enough, the Russians have made settlements with a number of companies in the past few months, and have made some of the payments on that. We hope that they will continue the negotiations with the other companies.

As a matter of fact, the negotiations are going on from time to time right now.

Of course, it was the State Department that got the Russians and the companies together and got them to sit down and negotiate, drawing on this agreement between the two countries.

Captain ROBILLARD. May I point out I think there has been entirely too much emphasis on the question of patents. If there is a patent and if it is worth-while filing and obtaining a patent in this country, they generally get it abroad. The important thing here, in my estimation, is the know-how, because you can take any patent from the Patent Office, but it will take you years to put it into production. That is the important thing. Where we want to manufacture something, and manufacture it in a hurry, we can go to the contractor and say, "Look. We want to get this into production somewhere else. Will you sell us the know-how?"

Well, they are not very much inclined to do so. They are very much inclined not to give away anything because, after all, we are establishing a competitor. If they also have a patent position with that know-how their problem then is not too bad, because although we give the know-how to the other people we are still not letting them out from under the patent.

However, until we can establish that they have some kind of a remedy and some kind of recourse in case we accidentally give away know-how, they are going to be very reluctant to come in voluntarily and help us on the matter.

Mr. JUDD. Thank you.

Mr. GORDON (presiding). Mr. Hays, have you any questions?

Mr. HAYS. No questions. Thank you.

Mr. GORDON (presiding). Mr. Fulton.

Mr. FULTON. You have said that section 509 of S. 1762, on page 15, lines 12 to 16, is already in the law in section 509 (e) of the act of 1910. Am I correct in that?

Captain ROBILLARD. About the defense?

Mr. FULTON. Yes. What did your section 509 (e) of the act of 1910 refer to when you said there was something already in the law?

Captain ROBILLARD (reading):

In providing the Court of Claims with additional jurisdiction, section 509 further provides, beginning at page 15, line 9, that:

"In any such suit the United States may avail itself of any and all defense, general or special, that might be pleaded in a like action."

Mr. FULTON. Was that just with respect to compromises administratively? That is what I am asking.

Captain ROBILARD (reading):

The United States may avail itself of any and all defense—

Yes, sir.

Mr. FULTON. Would you explain that?

Captain ROBILARD. Pardon me. Maybe we are referring to the settlement of claims?

Mr. FULTON. Yes. You referred to the act of 1910. That referred only to the administrative settlement of claims and the compromise of claims; did it not?

Captain ROBILARD. No, sir. We have had in the law since 1910 the right to sue the Government for patent infringement.

Mr. FULTON. I see.

Captain ROBILARD. But we have only had, since World War II, in 35 USC 91, the right to make an administrative settlement.

Mr. FULTON. I see. Your administrative settlement or compromise is limited solely to the time prior to the filing of the action in the Court of Claims; is it not?

Captain ROBILARD. We recognize, just the way the Court of Claims does, 6 years prior, and, of course, the right to a future license, which is the most important thing in most instances.

Mr. FULTON. Who handles the administrative compromise once it is filed in the Court of Claims?

Captain ROBILARD. Once it goes to the Court of Claims it passes to the Department of Justice, and we have nothing to say about it unless we are invited. We have, however, administratively settled them at the request of the Department of Justice after they have gone there.

Mr. FULTON. In Mr. Ooms' statement he said:

I am informed that some apprehension is felt outside the Government over the possible ramifications of putting this language into the law.

That is the principle of giving the Government this defense on having prior information?

Captain ROBILARD. Yes, sir.

Mr. FULTON. Mr. Ooms also says:

Since it is intended only to state existing principles as to defenses in suits of this type, it can be deleted without harm.

May I comment shortly on that? You have evidently in your testimony disagreed with Mr. Ooms as to what constitutes the law. For example, you have said that there is an article in the Journal of Patent Law that disagrees with certain court decisions which you inferentially state disagree among themselves on this type of defense. The basis of Mr. Ooms' testimony here has been that the law is settled and, therefore, because it is settled this need not be in the act and it would be just surplusage. Your position, though changes a bit from that. If it is your position that we put that section into this law, then we are saying it is necessary to put it into the Defense Production Act. Then it casts a question or a doubt on anyone left out of the section.

On the principle of exclusion that would mean that whoever is not under this defense program might not, by way of inference, have the right to this defense, because we found it necessary to put it in for defense purposes.

Captain ROBILLARD. Well, I did quote an authority, but I quote him merely because he happens to be an outstanding authority. I have made an extensive study of this whole problem of submission of information because we get them at the rate of approximately 300 a week, and what our liability is I still do not know. You can go into all of the ramifications.

For example, in the State courts—

Mr. FULTON. Could I stop you there?

Captain ROBILLARD. Yes.

Mr. FULTON. Because that is where you disagree with Mr. Ooms. He, however, says it is the settled law outside of our even putting it in this act.

Captain ROBILLARD. Well, I do not. I will disagree to that extent. I say if it is the settled law we do not need it in the act. If it is not the settled law we are enacting something special.

I say from my own personal belief it should be left out, because I do not think we should put in a special defense in this case, because the files of the Government are so voluminous that I think it would just be another deterrent against getting people to give us anything.

Mr. FULTON. Do you think if we put that section in the bill, it might be throwing a doubt on people not under the act because we felt it was necessary to put that section in?

Captain ROBILLARD. Oh, definitely.

Mr. FULTON. So that it would cast a reflection on other private organizations not having to do with the Government in their handling of this type of defense?

Captain ROBILLARD. Exactly.

Mr. FULTON. I would like Mr. Ooms or you, because you both have been working with it, to give us your idea of who it is who would have the apprehension outside of the Government on the possible ramifications of putting this language in the act.

Then, secondly, I would like to know what those ramifications are.

Captain ROBILLARD. May I just give you about 2 minutes on this, Mr. Fulton? This same defense has been offered to the Congress repeatedly for the patent cases. There is a history that goes back maybe 20 years.

Mr. FULTON. Then why try to force it under this legislation?

Captain ROBILLARD. It has been repeatedly thrown out.

Mr. FULTON. Then why try to put it in this bill?

Captain ROBILLARD. Both of us are in agreement to throw it out.

Mr. FULTON. Then who was for putting it in?

Captain ROBILLARD. The drafting of this act and this provision, in particular, was a long and onerous task. There are many people involved and at times there are things put in that some do not agree to, and it is just trying to get everybody into agreement on something.

Mr. FULTON. This is an important thing which affects many companies in Pittsburgh. Would you submit to us a history that you have spoken of concerning the attempts to put this defense provision into law in various respects. Would you also give to us who or what groups it was that have sponsored the placing of this defense provision in the defense production program at this time?

Captain ROBILLARD. Yes, sir.

Mr. GORDON (presiding). Mr. Herter, have you any questions?

Mr. HERTER. No questions. Thank you.

Mr. GORDON (presiding). Mr. Javits?

Mr. JAVITS. No questions. Thank you.

Mr. GORDON (presiding). Thank you very much, Captain Robillard, for your appearance and statement.

Mr. FULTON. I would like to say that I believe Mr. Ooms and Captain Robillard because they have disagreed as to the status of the law as a basis for their statements, should have a little further amplification in the record of each point of view.

(The information requested is as follows:)

STATEMENT OF MR. OOMS AND CAPTAIN ROBILLARD

It will be noted from the committee print on the Mutual Security Program for the fiscal year 1952, on page 55, that the defense initially ran not only against information but also against patents. As set forth in S. 1762, the defense only runs to information.

The defense, as originally set forth in section 509, of the House version, was an attempt to incorporate a defense which many in Government have long felt should be available to the Government. This defense has heretofore been supported by the Department of Justice and the armed services. Despite this, there has never been unanimity throughout the services as to the propriety of the defense.

The defense was originally presented as an amendment to the act of 1910 (now 28 U. S. C. 1498). It was proposed as early as 1940 but the Congress rejected it and it was again proposed in 1947. At this time extensive hearings were held and they are found in the printed hearings, serial No. 22 of 1948. Whereas in 1940 the use of the defense, if successful, would have invalidated a patent, H. R. 3929 proposed that the defense would only be good for the Government and would not invalidate a patent. H. R. 3929 was supported by the Department of Justice and the Department of Defense and it was opposed by the following:

American Patent Law Association
New York Patent Law Association
Chicago Patent Law Association
Los Angeles Patent Law Association
Banning & Banning, Chicago, Ill.
Burnitol Manufacturing Co., Boston, Mass.
George Crompton, Jr., Worcester, Mass.
The Glidden Co., Cleveland, Ohio
Roger Sherman Hoar, South Milwaukee, Wis.
Frank Kelper, M. E., Rochester, N. Y.
Liverance & Van Antwerp, Grand Rapids, Mich.
Hubert B. Miller, Wichita, Kans.
National Association of Manufacturers, New York, N. Y.
Packard Motor Car Co., Detroit, Mich.
C. B. Shane Corp., Chicago, Ill.
Ralph B. Stewart, Washington, D. C.
Oliver W. Storey, Chicago, Ill.
Watson, Bristol, Johnson & Leavenworth, New York, N. Y.

The Subcommittee on Patents ordered an amended bill reported. The amended bill was a watered-down version of what had been proposed. The most important change being that the defense would be available if it could be shown that the records relied upon arose out of a single project of one agency or a common coordinated single project of more than one agency.

So far as can be determined, the bill was never reported out by the Judiciary Committee, and no further attempts were made to have the bill reinstated.

During the drafting of the provisions to be incorporated in the Mutual Security Act of 1951 this defense of using records, as against patents, was again proposed and logically extended as a defense against liability for use of information. Again there was no unanimity and subsequent to the printing of the committee print on basic data supplied by the executive branch it was agreed that the defense of using information as against patents should be withdrawn. The only instance where the Government could be injured would be when it fails to file an application for a patent on something which has been developed within the Government. Unpublished Government records are not public records

and, therefore, do not fall within the statutory defense of a prior publication. However, the Government may rely upon the statutory defenses of prior use and sales. Under the Secrecy Act the Government is protected when it files a patent application on classified matter, and by so doing it can establish its defenses against patents. In almost all instances the Government may protect itself by diligent filing of patent applications.

In view of the repeated attempts to obtain the defense against patents, and the repeated rejection by the Congress, those in the armed services accepted these rejections as expressing the intent of the Congress that the Government should not have this special defense against patents.

With respect to the defense of using information in Government files, as against information submitted by another, the situation is quite different. It was agreed by all that this is a proper defense at law, and therefore incorporating the language within the act, was nothing more than a codification of the law.

Nevertheless, there was apprehension by a large cross segment of industry as well as lawyers. This apprehension appears to be founded on the fact that by spelling out the defense in legislation, it might become much broader than intended. The bothersome question of what records could be relied upon again became a matter of discussion. For example, the 2,700,000 patents in the Patent Office are all Government records. Could the Government, after adopting and using information submitted to it, escape liability by searching after the fact the patents to find something which proximated the information? Could the Government fit together records from various agencies and thus build up a defense? These were the same type of questions which bothered the subcommittee of the Judiciary when H. R. 3920 was before it, and that is why the committee amended the bill to provide that the records must have originated from a single project of one agency or a common coordinated single project of several agencies.

It was felt by many that if the defense were written into the law, courts would be constrained to hold that any defense built up from Government records could be relied upon. If the provision is not written into the law they feel that what the Government may introduce in the way of evidence remains within the discretion of the court and the court would not be bound by any statutory definition.

Because of this apprehension, it was agreed among the armed services and the Department of State that the defense should be stricken from the bill. All concluded that the defense would be available, and therefore there is no necessity for writing it into legislation. A careful examination of the record shows that there is no conflict between Mr. Ooms and Captain Robillard on this point. The apparent conflict arose because Captain Robillard said he could not determine what the liability of the Government would be under this defense.

Otherwise they are in agreement for they have both read the record and are convinced that there was no real, but only an apparent conflict arising from differences in language.

The following brief citation of the law of trade secrets seems to justify the opinion that if the United States has independently come into possession of the information assertedly to be a trade secret by a third party, such third party has no claim against the United States:

"1. Anyone may use it who fairly by analysis and experiment discovers it." (*Willkop and Holmes Co. v. Boyce*, 61 N. Y. Misc. 126, 112 N. Y. S. 874).¹

"2. . . . On the other hand, trade secrets are not given protection against all the world or persons who have not learned the secret by improper means or by virtue of a confidential relation; all that the owner of a trade secret is entitled to is protection from a breach of contract or confidence against one to whom he has confided the secret and those to whom such person may divulge it, and anyone who honestly and fairly comes into possession of the secret has the right to use, disclose, or sell it without being subject to restraint by injunction. (*Am. Dirigold Corp. v. Dirigold Metals Corp.*, 125 F. 2d 446; *Schavoir v. Am. Rebonded Leather Co.*, 133 A. 582, 104 Conn. 472; *Godfrey Mfg. Co. v. Lady Lennox Co.*, 134 SW 140; *McClary v. Hubbard*, 122 A. 460, 97 Vt. 222).²

"3. In a recent case, the trade secret which equity will protect by injunction was defined as 'a plan or process, tool, mechanism, or compound, known only to its owner and those of his employees to whom it was necessary to

¹ Williston on Contracts, vol. III, p. 2900, sec. 1646, 1920.

² Corpus Juris Secundum, sec. 145 (4) Trade Secrets (pp. 750-753).

confide it. It was a property right, and differed from a patent in that as soon as the secret was discovered either by an examination of the product or any other honest way, the discoverer had the full right to use it' (*Progress Laundry Co. v. Hamilton (Ky.)*, 270 S. W. 834; *Victor Chemical Works v. Hoff*, 289 Ill. 532, 132 N. E. 806)."

Mr. GORDON (presiding). The committee will recess until 2:30 this afternoon.

(Whereupon, at 12:25 p. m. the committee adjourned until 2:30 p. m. of the same day.)

AFTERNOON SESSION

(The committee reconvened at 2:35 p. m., the Honorable James P. Richards (chairman) presiding.)

Chairman RICHARDS. The committee will come to order, please.

Ladies and gentlemen, the next witness is Dr. Henry G. Bennett, Administrator, Technical Cooperation Administration, State Department. Dr. Bennett, will you have a seat, sir?

Doctor, you have a prepared statement, do you not?

STATEMENT OF DR. HENRY G. BENNETT, ADMINISTRATOR, TECHNICAL COOPERATION ADMINISTRATION, STATE DEPARTMENT

Dr. BENNETT. Yes, sir.

Chairman RICHARDS. Will you proceed, sir?

Dr. BENNETT. Mr. Chairman, I am glad to be permitted to present the statement of the Technical Cooperation Administration, commonly called the Point IV: Administration, to the committee during the hearings on the Mutual Security Program.

You have no doubt heard of the Technical Cooperation Administration, because it is involved in three of the titles. But it occurred to me, if it is agreeable to you, Mr. Chairman, and with the committee, I would like to discuss briefly the point 4 program in its entirety as it affects all of the areas.

Chairman RICHARDS. Do you mean by that, Doctor, that you want to put your statement in the record and then discuss it, or will you read your statement later?

Dr. BENNETT. I would like to put the statement in the record, if I may.

Chairman RICHARDS. That will be fine. I think the committee would rather have you put your statement in the record to study and have you make a statement and then ask questions.

Dr. BENNETT. That is agreeable.

Chairman RICHARDS. Without objection, the statement will be included in the record at this point.

Dr. BENNETT. During the course of these hearings you have necessarily received piecemeal information about the Technical Cooperation program since it is included as a part of each of the regional programs. At some time, however, I think you will want to get a picture of the total job being done and contemplated under what is broadly known as the point 4 program which is being carried on by the Technical Cooperation Administration of the Department of State. I would also like to give you my understanding of the distinction

¹ The Law of Injunctions, Lewis & Spelling (1926).

between point 4 and other types of economic aid and of the plan of operation for 1952.

If the world were not threatened with armed aggression, it would still be in our self-interest to help other peoples to free themselves from their historic enemies—starvation, disease, and ignorance. We know that the Communists capitalize on troubled situations, and the best way for us to combat communism is to help improve the situation. Such a program would be part of the long-range point 4 program.

But today we are threatened with armed aggression and, while the point 4 approach is no less necessary, there are certain parts of the world where it is not enough. There are certain countries where military considerations make it necessary for us to do far more than should or could be done under a point 4 program which is founded on a long-range self-help basis.

In such countries, therefore, it will be necessary to have actually two programs—the emergency big-grant program and the long-range point 4 program.

The question arose, Should we have two agencies carrying on different but related programs in some countries, or should we have one agency carrying on both types of programs in those countries?

It was decided to combine both programs in the single agency whose particular type of program predominated in a given country. This seemed to be the best mechanism for handling both an emergency situation and a long-range situation at the same time. If and when the emergency passes I assume we will want to reexamine this arrangement.

Only one agency will have responsibility for administering economic and technical assistance programs in any single country. Consequently, in those countries where ECA is assigned the job of administering grant and capital improvement programs they will also take over the existing technical cooperation activities.

The proposed program for the Near East, north Africa, and Latin America is primarily one of technical cooperation and one in which considerable emphasis must be placed upon the rural approach. Substantial grants are involved but they are accompanied generally by technical guidance and supervision at the village level. Such programs will be administered by TCA through a regional operation.

The Technical Cooperation Administration program for fiscal year 1952, under this plan, would consist of programs totaling \$79,256,000. This figure includes \$13,000,000 for the multilateral technical assistance activities. You have the detailed regional statistics before you. In summary form, the Technical Cooperation Administration bilateral program, exclusive of administrative costs, would consist of the following:

Area:	Proposed program
American Republics.....	\$18,000,000
Near East and north Africa.....	47,808,000
Asia (Afghanistan, Ceylon, and Nepal).....	450,000
Total.....	66,258,000

In addition, as noted above, we would allocate for multilateral technical assistance activities \$13,000,000, of which \$1,000,000 would go to the Organization of American States, and \$12,000,000 to the United Nations and the specialized agencies. We work very closely with those

organizations in correlating our activities. In connection with the Near East program, we would work in close relationship with the Palestine Refugee Agency on problems involved in refugee resettlement.

The above figures do not include the \$6,000,000 for administrative and domestic program costs which are provided for in title I.

Point 4 activities are now under way in Asia, in the Near East and north Africa, and in Latin America. As I indicated, these activities will be carried forward in each region with funds provided under the Mutual Security Program legislation.

I should like now to tell you briefly about our present program and how it is being administered.

The act for international development which authorized the point 4 program was approved in June 1950. Appropriations to implement this act became available in September 1950. New appropriations for technical cooperation activities totaled \$26,900,000.

In addition, there became available an appropriation of \$5,000,000 plus a carry-over of \$1,369,309 for the work of the Institute of Inter-American Affairs, and also a sum of \$2,537,000 which was transferred to the Technical Cooperation Administration from funds appropriated for technical assistance work under Public Law 402.

An over-all total, therefore, of \$35,806,309 was available during fiscal year 1951 for all technical cooperation programs.

On September 8, the point 4 program became a responsibility of the Department of State by Executive order. On October 27, 1950, the Technical Cooperation Administration was established and given central responsibility within the State Department for administration of the program.

The task of negotiating bilateral agreements and receiving official requests for assistance must necessarily be handled slowly and with great care. Nevertheless, in the few months we have been in operation we have made substantial progress. We have fully utilized the funds which were made available. I believe we have utilized the funds wisely and effectively.

We now have technical cooperation programs underway in the following 36 countries: Afghanistan, Bolivia, Brazil, Burma, Ceylon, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Egypt, Ecuador, El Salvador, Greece, Guatemala, Haiti, Honduras, India, Indonesia, Iran, Iraq, Israel, Lebanon, Liberia, Libya, Mexico, Nicaragua, Pakistan, Panama, Paraguay, Peru, Philippines, Saudi Arabia, Thailand, Uruguay, and Venezuela.

We have authorized projects providing for the employment of over 1,200 technicians in the field. Of these, 710 will be employed by various Government agencies, and approximately 500 will work for private contractors. Government agencies already have 451 employees at work, and private contractors have 233 employees at work, a total of 684 American technicians actually at work on foreign assignments. They are supported by 209 technicians stationed either full or part time in this country or in irregular roving assignment. In summary, 893 American experts are now on the job. In addition, there are 164 employees who were recruited locally.

Between September 1950, and June 30, 1951, the Technical Cooperation Administration received 690 requests for assistance from 43 countries. Almost 500 of these requests have been approved; 872 point

4 training grants were approved in fiscal year 1951 for trainees to study in the United States. They come from 41 countries.

Out of the \$35,800,000 available for the program in 1951, \$12,000,000 was made available to the United Nations and the specialized agencies for the expanded multilateral technical assistance program. The UN now has programs operating in 37 countries. We are working closely with UN officials both in planning and in operation in the field.

We provided \$1,000,000 to the Organization of American States for technical assistance programs in Latin America. This was primarily for regional training centers.

A total of \$8,826,000 was available for programs administered by the IIAA. An additional \$6,139,351 was allocated to other agencies such as the Department of Agriculture and the Department of the Interior for carrying out projects approved by TCA. Finally, a total of \$7,833,009 was utilized directly by TCA in the Department of State. The following table summarizes the use of 1951 funds by cooperating agencies:

Department of Agriculture.....	\$2,452,284
Department of Commerce.....	1,015,837
Department of the Interior.....	1,162,834
Federal Security Agency.....	1,017,372
Department of Labor.....	325,922
Bureau of the Budget.....	72,377
Housing and Home Finance Agency.....	15,890
Tariff Commission.....	2,550
Tennessee Valley Authority.....	3,120
Department of the Treasury.....	2,920
Federal Power Commission.....	4,460
Post Office Department.....	2,692
Department of the Army.....	8,360
Federal Communications Commission.....	52,683
Institute of Inter-American Affairs.....	8,826,449
Department of State:	
Multilateral programs.....	13,007,500
Bilateral programs.....	7,833,009
Grand total.....	35,806,309

These have been high lights of our 1951 program. I should like now to tell you briefly how the program is being administered.

Although the TOA is still very young, I believe it has made a sound beginning. As you know, the point 4 program includes operations in a large variety of technical fields—agriculture, mineral development, roads and highways, communications, health and sanitation, education, civil aeronautics, water engineering, and many others.

We are fortunate in that in nearly all these fields one or another of the Federal agencies has already a great reservoir of skill and experience. I believe our greatest strength lies in the fact that we are bringing to bear upon the problems of the underdeveloped areas the resources and experience of the entire United States Government.

In fact, we have gone even further. We are bringing to bear also the experience and skill of private business firms, educational institutions, and of other private organizations from all parts of the United States.

We have continued the programs of the Institute of Inter-American Affairs in Latin America and in fact have expanded its operation considerably. We have enlisted the participation of 14 technical agencies of the United States Government. We have entered into direct con-

tractual arrangements with 56 private organizations and institutions involving work in 19 countries at a cost of \$3,852,000.

Many of the contracts are with land grant colleges and other educational institutions including the University of Arkansas, Texas A. & M. College, the University of Minnesota, Utah State Agricultural College, New Mexico A. & M. College, Brigham Young University, the University of Illinois, Vanderbilt University, the University of Utah, Purdue University, the University of Wisconsin, University of Maryland, the University of Denver, and Northwestern University.

Other contracts are with research organizations such as the Armour Research Foundation of Illinois and the Southwest Research Institute.

We have made arrangements to expand the activities of training institutions abroad such as the Near East Foundation and the American University at Beirut.

Finally, we have made arrangements for specific tasks to be undertaken abroad by American engineering and other private firms.

Let me stress this point. The Technical Cooperation Administration directs and controls the program carried out with the assistance of this wide variety of Government and private agencies. We thus secure the advantages of using the specialized skills of the agencies of the Federal Government, while providing a unified administration of the total program.

TCA has entered into bilateral general agreements looking toward long-term cooperation with the underdeveloped countries with which we are cooperating. These general agreements are supplemented by specific project agreements setting forth detailed plans of work.

Program plans are developed in the field by American officers of our Foreign Service missions, including agricultural and other specialized United States representatives, as well as by special representatives of the Technical Cooperation Administration. All work, of course, with representatives of the host governments.

Typical point 4 technical cooperation projects are those which will (a) assist the local government and local population in taking the most urgently needed steps to develop the country's resources; (b) improve local skills, by sending experts to provide such skills and by training local personnel, both within the country and by bringing them to the United States; and (c) those which hold out the most promise of growing into enduring and long-term cooperation between the United States and the country.

Supplies and equipment are included in point 4 programs to the extent necessary to insure substantial results in assisting the country with each project undertaking, whether it be land reclamation or expansion of education.

The plans and the official requests from the governments are presented to the Technical Cooperation Administration. We review them in consultation with representatives of the technical agencies which have competence in the particular fields of work involved and in consultation with area experts within the State Department's regional bureaus.

As soon as the projects are approved, funds are either allocated to one of the participating technical agencies, which then assigns or recruits experts needed to carry out the project in the field, or the project is let out on contract to a private concern. Many projects are administered directly by TCA itself.

Periodic reports are submitted to the Technical Cooperation Administration on the progress and operation of each activity, and close supervision is maintained at all times.

Although the individual experts in the field receive their technical guidance from their own agencies in Washington, all personnel in a particular country are administratively supervised by a representative of TCA. In some instances this representative is a member of the Embassy economic staff. In other instances, he is an officer specifically employed by TCA for that purpose. As the volume of activity increases, we are employing country directors of technical cooperation whenever needed.

That briefly summarizes the nature and scope of our present program. Before I close, I should like to say a few words about the point 4 idea, about its objectives, its fundamental approach and its long-term implications.

The point 4 program is not something brand new although the conception of it as a national policy on a world-wide basis is new. Missionaries of all faiths were the pioneers in the work in helping the peoples of underdeveloped areas to help themselves in improving their way of living. Private organizations and institutions of many kinds have for years carried on technical assistance work abroad costing millions of dollars annually.

Moreover, the Congress of the United States authorized technical cooperation programs when it established the Institute of Inter-American Affairs and enacted the Smith-Mundt Act.

The point 4 program is not just a program to do good. It is very clearly a program in our own self-interest. We are increasingly economically dependent upon the underdeveloped countries. Our productive capacity has increased at a great rate; from producing about one-third of the world's manufactured goods in 1940, we now produce about 60 percent of the total world production. Present plans call for a further increase in our production of 20 percent by 1953.

At the same time, raw material production has remained constant and as you know is expected to fall off in the future. An absolutely vital 73 percent of raw material requirements come from the underdeveloped areas.

Basically, therefore, as Mr. Rockefeller ably pointed out in his report, *Partners in Progress*, our domestic economic and military strength depends upon maintaining the supply of raw materials from the underdeveloped areas.

The underdeveloped areas offer the greatest prospect for future markets for United States production. The problem of markets is, as you know, very acute and if, as we hope, our excess capacity for military production should become surplus, unless markets are found for the products of these industries the standard of living of our people would be seriously endangered.

If, however, the underdeveloped countries are able with our help to increase their productivity and income, and consequently their capacity to buy abroad, they will become increasingly important purchasers of United States goods. The potentialities of our trade with these regions in conditions of peace and developing economies are tremendous.

However, we cannot either commandeer their raw materials nor can we force them to take our manufactured goods. The democratic

way is to seek the cooperation of the peoples and the governments so that we and they can together embark on a program which is in our joint interest. It is a basic United States policy to do everything possible to assist and strengthen the peoples who are our allies in the free world.

The underdeveloped areas are potentially, with a few exceptions, rich and fruitful countries. As in our own country, the problem is one of a better use of the resources available; that is, land, water, and people. Because of poor use of these resources the 1 billion persons who inhabit the underdeveloped areas are today suffering from hunger, from disease, from poverty and from illiteracy. Average per capita incomes are about \$80 per annum. About three-fourths of the people live on the land practicing the most primitive agriculture.

Our projects in most of these countries are designed particularly to improve agriculture. They have as a second direct purpose, the best use of the available human resources.

The projects, almost without exception, are small-scale operations not intended to bring overnight remedies to ancient problems. Since they are small scale, they are inexpensive.

Whenever possible, the projects have been geared to have an impact through a dramatic demonstration or pilot operation. The idea is to send in the minimum number of people, with tools and limited amounts of supplies, so they may show the people by doing, and guide and instruct their doing.

Through extension instruction and the use of informational media on training, it is hoped that the new and better ways of doing things will catch on, so that in the course of 2 or 3 years, there will be much less need for outside technical experts.

The projects are designed to have certain effects on the peoples and on the governments of the region. The United States makes its plans and works with the government, and no project is undertaken which the governments have not requested, and which they themselves have not or are not ready to support fully.

The point 4 program respects the sovereignty of the governments in the countries where it has been invited to work. Only those activities are undertaken which are requested by the host country and into which the country itself is willing to invest its own resources.

It has been TCA's experience that on an average each dollar we now contribute to a program is matched by the equivalent of \$3 contributed by the country itself to the program. Whenever possible, projects are carried on jointly, with the nationals of the country taking leadership. Wherever possible, the local organization to carry out point 4 work is identified as a part of the national or local government or governmental institutions. The programs take full account of local religious and social customs and strive to work within the limits set by these cultural patterns.

The projects are of a kind, and they have been so planned, that to be successful, there must be maximum operational participation by the actual workers, settlers, and farmers. The program is almost wholly operable on the village, local area or provincial level. The people feel that these are their own projects and it is they who make them work.

As point 4 is successful, the popular understanding and support of the people for their governments will be increased, which will make

for stability and be an effective deterrent to Communist propaganda. The governments, in turn, will be more likely to embark on enlightened policies of improvements of standards and conditions, and there will be started a much-needed feeling of responsibility for the well-being and welfare of the people. Finally, we hope, both the people and their governments will feel proud of the fact they have been able to advance themselves through American assistance, and their friendship and understanding for the United States will be much greater.

I said before that since the projects are small they are, as foreign aid grants go, inexpensive. Let me elaborate on that point. While the program has been kept modest in scope, the pilot projects have been selected which will lay the basis for more extensive economic development activities.

Once the pilot projects, and the surveys, have been completed, it is hoped that conditions will be ripe for undertaking the large-scale agricultural, water, industrial and other expansion schemes which are needed. It is believed that the benefits of the pilot projects, and projects which the governments themselves have been stimulated to undertake in the next year or two, will result in improved earnings of the governments so that, to a maximum extent, the large-scale projects may be financed from loans, either private or public.

The point 4 program is a long-term program, yet will make an immediate and important contribution to the security of the free world. Its inclusion in the Mutual Security Program along with the large economic aid activities demanded by the present emergency is primarily for convenience in making the presentation to Congress.

But its basic objectives require that it be regarded in long-range terms as an integral part of our foreign-affairs program. It will be plain good business to continue beyond the present emergency a modest program of stimulating economic development and thus paving the way for a stimulation of private investment.

First of all, the Act for International Development was passed by the Congress in June 1950. Appropriations were made in September 1950 and the President, by Executive order, set up the administration as a part of the Department of State shortly after.

I personally was appointed Administrator in December of last year. Following the provisions of the act, we have set out to put it into operation.

The act provided for rendering certain types of technical assistance to the countries of the so-called underdeveloped areas of the world. These include practically all of Latin America, Africa, the Near East, and Asia.

Through the embassies, we presented the possibilities offered to 60 different countries. We have signed point 4 agreements with 32 of these countries. The countries with whom we have signed agreements are as follows: Afghanistan, Bolivia, Brazil, Ceylon, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, Egypt, Eritrea, Ethiopia, Haiti, Honduras, India, Iran, Iraq, Israel, Jordan, Lebanon, Liberia, Libya, Mexico, Nepal, Nicaragua, Pakistan, Panama, Paraguay, Peru, Saudi Arabia, and Uruguay.

We are still carrying on negotiations with the other 28, and only 1 country so far has declined to sign definitely. That is Syria. They ask to hold it in abeyance, with certain reservations, due to political complications with a neighbor.

I think you might be interested as to what the agreement calls for. It is a simple agreement, easily understood, and makes certain quite simple provisions that are embodied in the act. The major provisions are these: The Government of the United States and the government of the host country undertake to cooperate with each other in the interchange of technical knowledge and skills.

That country agrees to coordinate and integrate all technical cooperation programs carried on within its boundaries, to cooperate in the mutual exchange of technical knowledge and skills with other countries participating in the point 4 program, and try to make effective use of the results of technical projects which it carries on in cooperation with the United States.

That country agrees to keep the United States informed concerning the projects and operations carried on under the agreement, including a statement on the use of funds, materials, equipment, and services provided under the agreement, and to give information to the United States regarding technical assistance which it is requesting from other countries or from international organizations.

The two Governments agree they will give full publicity within their respective countries to the objectives and progress of the technical cooperation program carried on under the agreement.

The agreements make provision for the execution of separate project agreements for individual projects as they are to be established; those project agreements to contain provisions relating to the administrative procedures, disbursement of funds, accounting for funds, and the respective financial contributions to be made by each government.

Next, the host country agrees to bear a fair share of the cost of technical cooperation programs and projects; and it is provided that any funds, materials, and equipment introduced into those countries by the United States shall be exempted from taxes, service charges, investment or deposit requirements, and currency controls.

Those are the major provisions as to the contracts.

Mr. RUBINOFF. Mr. Chairman, could a sample copy of that contract be placed in the record?

Dr. BENNETT. I would be glad to place it in the record.

Chairman RICHARDS. It will be placed in the record at this point. (The material referred to is as follows:)

TEXT OF POINT 4 AGREEMENT WITH GOVERNMENT OF INDIA

ARTICLE I. ASSISTANCE AND COOPERATION

1. The Government of the United States of America and the Government of India undertake to cooperate with each other in the interchange of technical knowledge and skills and in related activities designed to contribute to the balanced and integrated development of the economic resources and productive capacities of India. Particular technical cooperation programs and projects will be carried out pursuant to the provisions of such separate written agreements or understandings as may later be reached by the duly designated representatives of India and the Technical Cooperation Administration of the United States of America, or by other persons, agencies, or organizations designated by the Governments.

2. The Government of India through its duly designated representatives in cooperation with representatives of the Technical Cooperation Administration of the United States of America and representatives of appropriate international organizations will endeavor to coordinate and integrate all technical cooperation programs being carried on in India.

3. The Government in India will cooperate in the mutual exchange of technical knowledge and skills with other countries participating in technical cooperation programs associated with that carried on under this agreement.

4. The Government of India will endeavor to make effective use of the results of technical projects carried on in India in cooperation with the United States of America.

5. The two Governments will, upon the request of either of them, consult with regard to any matter relating to the application of this agreement to project agreements heretofore or hereafter concluded between them, or to operations or arrangements carried out pursuant to such agreements.

ARTICLE II. INFORMATION AND PUBLICITY

1. The Government of India will communicate to the Government of the United States of America in a form and at intervals to be mutually agreed upon:

(a) Information concerning projects, programs, measures, and operations carried on under this agreement, including a statement of the use of funds, materials, equipment, and services provided thereunder;

(b) Information regarding technical assistance which has been or is being requested of other countries or of international organizations.

2. Not less frequently than once a year the Governments of India and of the United States of America will in mutual consultation make public in their respective countries periodic reports on the technical cooperation programs carried on pursuant to this agreement. Such reports shall include information as to the use of funds, materials, equipment, and services.

3. The Governments of the United States of America and India will endeavor in mutual consultation to give full publicity to the objectives and progress of the technical cooperation program carried on under this agreement.

ARTICLE III. PROGRAM AND PROJECT AGREEMENTS

1. The program and project agreements referred to in article I, paragraph 1 above, will include provisions relating to policies, administrative procedures, the disbursement of and accounting for funds, the contribution of each party to the cost of the program or project, and the furnishing of detailed information of the character set forth in article II, paragraph 1 above.

2. With respect to any funds, materials, and equipment introduced into India by the Government of the United States of America pursuant to such program and project agreements, the Government of the United States of America shall not be liable for taxes, service charges, and investment or deposit requirements, and will be exempt from exchange restriction.

3. The Government of India agrees to bear a fair share, as may be mutually agreed upon, of the cost of technical assistance programs and projects.

ARTICLE IV. PERSONNEL

1. All employees of the Government of the United States of America assigned to duties in India in connection with cooperative technical assistance programs and projects and accompanying members of their families shall be exempted from income taxes with respect to (1) salaries and allotments paid to them by the Government of the United States of America and (2) any non-Indian income upon which they are obligated to pay income or social-security taxes to the Government of the United States of America.

2. Such employees and members of their families shall receive exemption with respect to the payment of customs and import duties on personal, household, and professional effects and supplies including one personal automobile on certificates being furnished, by such employees, to the collector of customs concerned, through the technical assistance unit of the Finance Ministry of the Government of India, to the effect that these effects and supplies are for the personal use and consumption of such employees and members of their families. Duty is liable to be paid in respect of any such articles imported without payment of duty and sold or disposed of within 8 years, but there shall be no liability if such articles are reexported within the period.

ARTICLE V. ENTRY INTO FORCE, AMENDMENT, DURATION

1. This agreement shall enter into force on the day on which it is signed. It shall remain in force until 8 months after either Government shall have given notice in writing to the other of intention to terminate the agreement.

2. If, during the life of this agreement, either Government should consider that there should be an amendment thereof, it shall so notify the other Government in writing and the two Governments will thereupon consult with a view to agreeing upon the amendment.

3. Subsidiary project and other agreements and arrangements which may be concluded may remain in force beyond any termination of this agreement, in accordance with such arrangements as the two Governments may make.

4. This agreement is complementary to and does not supersede existing agreements between the two Governments except insofar as other agreements are inconsistent herewith.

Mr. VORYS. Could we glance at it?

Dr. BENNETT. Yes, sir. This is the text of the agreement with India. There is an additional page which does not apply.

Chairman RICHARDS. This is about three pages and a quarter. Does anybody want to look at that?

Dr. BENNETT. That is the over-all contract we sign before we enter into programs with the country.

Mr. RINICOFF. Mr. Bennett asked if there were any questions on the contract. I wonder if it would be proper to ask a question now?

Chairman RICHARDS. If you want to ask any questions on the contract, ask them now.

Mr. RINICOFF. This is the uniform contract?

Dr. BENNETT. That is right.

Mr. RINICOFF. Have you signed exactly the same contract with every country?

Dr. BENNETT. Practically the same. There is very little variation.

Mr. RINICOFF. That is all.

Mr. VORYS. Is there a provision in the contract for payment of a fair share of the cost of the program by the country?

Dr. BENNETT. Yes, sir.

Mr. VORYS. Do you remember where that is?

Dr. BENNETT. I will underline it: "The Government of India agrees to bear a fair share, as may be mutually agreed upon, of the cost of technical assistance programs and projects."

That is in every contract.

Mr. CHIPERFIELD. Percentages run different for different countries?

Dr. BENNETT. Different for different countries, but in the main the minimum is 50-50. In many of the countries it is far more than that; I mean, the percentage of the host country is greater than that.

Mr. VORYS. That is the minimum for the recipient country—

Dr. BENNETT. Fifty percent. But take Brazil, for example. In their health program—Mr. Iverson is here—my recollection is we have 32 technicians in Brazil, and there must be 2,000 Brazilian technicians in the health program, would you not think, Mr. Iverson? You have the figures.

Mr. IVERSON. Yes. And on the funds, Dr. Bennett, the last year, 1950, the program contribution to the health and sanitation program by the United States was \$215,000, and the program contribution by the Government of Brazil was \$5,812,000.

Mr. CHIPERFIELD. Mr. Chairman, after we get these programs started, the tendency is for the host countries' contributions to increase and ours to go down; is that not right?

Dr. BENNETT. That is right. It is exactly like a grub stake in the old West, where you would stake a man to go out into the mining area

and after he makes his find he pays you back tenfold. That is what it amounts to. It is a grub stake.

Mr. CHIPERFIELD. But they do not pay us back generally with an increase like that.

Dr. BENNETT. The benefits are immeasurable.

Mr. CHIPERFIELD. To us?

Dr. BENNETT. The benefits, of course, are hard to—

Chairman RICHARDS. The old grub staker used to get 50 percent of what you found?

Dr. BENNETT. That is right. I know of an example of that in Miami, Okla., where an old groceryman became a very rich man by grub staking a miner who was picking around with a jack in the area of Joplin, Mo.

Chairman RICHARDS. You think if we strike gold we may get rich ourselves?

Dr. BENNETT. I would say we have much to gain, and the amount we are putting up is quite small.

Anyway, the procedure is along this line, first, the contract, and then individual projects, and the operation begins. It provides under the act for training programs and technical programs. The term "technical programs" means programs for the international interchange of technical knowledge and skills. Such activities may include training projects that serve the purpose of promoting the development of economic resources and productive capacities of underdeveloped areas.

During the fiscal year 1951, we have made 862 training grants. More than half of these trainees are serving their training in agriculture, health and education.

Chairman RICHARDS. Mr. Chiperfield.

Mr. CHIPERFIELD. How do you select your personnel?

Dr. BENNETT. To go into the program?

Mr. CHIPERFIELD. Yes.

Dr. BENNETT. The personnel is selected on this basis: The act provides that we shall operate with the agencies of Government. I will read the provision:

The President is authorized to plan, undertake, administer, and execute bilateral cooperation programs carried on by any United States Government agencies. The President may allocate to any United States Government agency any part of any appropriation available for carrying out the purposes of this title. For purposes of promoting the effective implementation of the act, the heads of all departments and agencies, the participation of which is requested by the Secretary of State, are hereby authorized and directed to provide for such participation in the maximum extent consistent with law.

The procedure which we followed has been along this line: For example, Lebanon calls on us for an agreement to make a water survey of the country, which is in that country largely the Litani River project.

Then we call on the Department of the Interior, with its great division of skilled help already at its disposal, and 10 men are chosen to go. These 10 men from the Reclamation Service have made and are making the survey on the Litani project. That is one type of cooperation.

Mr. CHIPERFIELD. Do you select personnel outside of Government agencies?

Dr. BENNETT. Yes, sir.

Mr. CHIPERFIELD. Do you have a personnel man who is in charge of your selection?

Dr. BENNETT. Yes, sir.

Mr. CHIPERFIELD. Who is he?

Dr. BENNETT. Mark Gordon.

Mr. CHIPERFIELD. That is all, Mr. Chairman.

Dr. BENNETT. I would be glad to pursue the procedures which we have used in selecting personnel.

Mr. CHIPERFIELD. That is sufficient, as far as I am concerned.

Dr. BENNETT. The project, once it is determined, we follow through in that fashion. After my appointment, I visited many of these countries, and came to the conclusion that the biggest need which they have in all of the underdeveloped areas is to increase the food production.

I discovered, for example, that in Latin America every country in Latin America is dependent on imports for its food, with the exception of the Argentine. Consequently, we are stressing agricultural programs first.

A majority of the people in the underdeveloped areas of the world, in fact 90 percent of them, are on the farms. The farming methods are quite primitive, going all the way from the simplest type of wooden plow and the hoe, which is a crooked stick, up to the most simple of our modern equipment.

Consequently, it has occurred to me and my associates that one of the biggest contributions we can make in technical assistance is to begin with agriculture in all of these countries.

Consequently, we are strengthening the agricultural program everywhere we have the opportunity. I was last week in Ethiopia, where the government has requested assistance in agriculture. I visited the great agricultural areas of Ethiopia. It is one of the most promising of all the underdeveloped areas from the standpoint of its ability to produce.

There we are, with the Government, setting up an agriculture training program to begin with. It is the desire of the Emperor to take their small agricultural training school and bring in the boys from all over Ethiopia to increase their knowledge of plant life and animal life.

With the agencies there now we are now setting up, first, an agricultural program. Paralleling it will be a program in education; in like fashion, a public health program.

In Egypt, where I likewise have been within the last 10 days, our program is following the same line: agriculture, education, health, and sanitation.

To show you how the program works, where all the agencies of our Government bring to bear the great technical experience which is ours, take the case of Ethiopia, which has potentially as fine land and as great a productive area as you find anywhere in the equatorial areas of the world, located high, with an altitude running from 5,000 to 8,000 feet, the great plateau.

They have no roads; in fact, most of the interior of Africa has never had the wheel. As you go through the country you are amazed at the fact that the highways are practically nonexistent. The World Bank has made a loan for the building of a road which will begin at Gimma, which is 160 or 170 miles southwest of the capital and will

extend through the capital and on down to the coast to the newly granted facility in Eritrea, the port of Assab, on the Red Sea.

This loan was made and it is a relatively small one, involving only a few million dollars. The Ethiopian Government is putting up two or three times as much as the loan from the World Bank, but the Bureau of Public Roads is furnishing the director who will supervise the building of this great road which gives them for the first time an outlet to the sea.

From Israel comes a request for someone to come and go over their highway system. They built about 2,000 kilometers of surface road. The traffic has increased and they are having some difficulty with certain sections.

This director from Ethiopia went over for 2 weeks and, with the engineers working on it, studied the roads and on the basis of that made his recommendation as to what they need. They need two men—one soils engineer with a small mobile soils laboratory, and one structural engineer.

So the service of this man from the Bureau of Public Roads is not only making it possible for Ethiopia to have a reliable highway built with the funds at their disposal, added to the funds made available by the World Bank, but in addition it is possible for the neighboring countries to get technical counsel at the lowest possible cost.

We have operated on that basis. In like fashion provision is made in the act for using private facilities as well as public. We have entered into agreement with a number of the land-grant colleges of the country to furnish cooperation and assistance.

For example, we have called on the colleges of Utah to aid in the Iranian program. Dr. Harris, who is there directing the program, has a growing number of assistants coming to him from the colleges of Utah, agriculture from the land-grant college, and doctors and nurses from the University of Utah, and other aides and technicians from the Brigham Young University.

These people will work there as a unit under contract. In like fashion we have entered into agreement with the University of Beirut for a program of training these young people in the immediate area of the Middle East, and from East Africa.

It can be done much less expensively there by merely adding a few technicians to the staff of the American University of Beirut, which has been in continuous existence for more than 80 years, and where the leadership in the Middle East and in East Africa has largely been trained.

I spent more than a week in this visit in Ethiopia in the company of the Minister of Agriculture. When we discussed this plan he gave it hearty approval and said that he himself was a graduate of the American University of Beirut. So we are following along the plan of training.

The truth is that the whole program is in the main a training program. The big need in every underdeveloped area is for a reliable, trained, local leadership, and consequently we are seeking as best we can to encourage this type of training.

In other words, Mr. Holmes, who appeared before you at the hearing the other day, and who is in the room now, has said that the need of India is for 50,000 young men who are trained in the agricultural production and procedures.

That doesn't mean necessarily 4 years in college, but it does mean gradually assembling from the native population of those countries the ablest and best young men whom we can find available, and by short courses and intensive training train them to carry on the work in their own country on somewhat the basis of the county agents in our own country, and following somewhat the same procedures.

It took us between 25 and 40 years in this country to develop an extension service, agricultural and home economics. With this accumulated experience we can quickly train people in the centers of those countries with whom we cooperate.

I think, Mr. Chairman, that is about the statement that I would like to make. We are less than a year old. We are operating in 32 countries. We are cooperating with the agencies of government, and as the law provides for coordination of all existing technical cooperation programs and those that may hereafter be created, we have tried to carry out that provision of the law with some measure of success, I think, and in addition to that we have had the wise judgment and the long experience of the United States Departments of Agriculture, Commerce, Interior, and all the rest cooperating with us in a way that makes it possible for us to bring the whole impact of the experience of our Nation to bear quickly in these nations with whom we are cooperating.

Chairman RICHARDS. Thank you, Dr. Bennett.

Mr. Chipfield?

Mr. CHIPFIELD. How do you integrate the point 4 program in Central and South America, for example, with the IIAA program?

Dr. BENNETT. I have a statement on that that I would like to file if agreeable.

Chairman RICHARDS. How long is the statement?

Dr. BENNETT. Two pages.

Chairman RICHARDS. Without objection, that will be filed at this point.

(The report was filed in the record at this point.)

ROLE OF THE IIAA IN THE POINT 4 PROGRAM IN LATIN AMERICA

Under the act for International Development, the Administrator of the technical cooperation program has been given responsibility "to coordinate and direct existing and new technical cooperation programs."

There were two existing technical cooperation programs in Latin America when the act was passed. One was the program of the Institute of Inter-American Affairs. The other was the scientific and cultural cooperation program being carried out under Public Law 402. These programs have been continued in 1951 under the policy direction of the Technical Cooperation Administration (TCA).

The IIAA activities which became a part of point 4 involved an expenditure of approximately \$5,000,000 per annum. The Institute has been operating comprehensive country programs in the three fields of health and sanitation, education, and food supply. During 1951 I have authorized expansion of a number of the Institute's going programs. In addition, I have allocated to it funds for the initiation of four new programs in education, three in health, and three in food supply. The IIAA now has a total of 10 country programs in education, 17 in health and sanitation, and 7 in food supply.

Of the \$11,500,000 authorized for projects in Latin America during 1951, \$8,828,000 was made available to the IIAA. The remaining \$2,747,000 was used primarily for the continuation and expansion of projects which had been carried on previously by participating United States Government agencies under Public Law 402. About 60 percent of this amount (\$1,450,000) was allocated to the United States Department of Agriculture and the remaining 40 percent went

primarily to the Departments of the Interior, Commerce, Labor, and to the Federal Security Agency.

The Department of Agriculture is responsible to TCA for rubber development work in 10 Latin-American countries and is undertaking agricultural research work in about a dozen countries. For example, it is working on kenaf in Cuba, tobacco in the Dominican Republic, forestry in Panama, and projects in entomology in Columbia. In a few instances some work has been done by the United States Department of Agriculture also in agricultural extension in countries where there are no IIAA food-supply programs.

The Commerce Department has been asked to undertake projects in a number of countries in civil aviation, highways, geodetic surveys, and technical standards. The Interior Department's projects are in irrigation, mineral resources, fisheries, and geological investigations. The Federal Security Agency has a few projects under way in specialized fields of health.

Thus far there has been no special organization set up within each Latin-American country to supervise all the point 4 activities under way in the country. Coordination and supervision have been accomplished through the chief economic officer at the diplomatic mission. Steps are now being taken, however, to establish in each country a Director of Technical Cooperation who will be under the general supervision of the Chief of Mission and who will be responsible to TCA for supervising and directing all point 4 activities in the country and for closely coordinating them with the multilateral programs.

I feel that we are fortunate in having made an excellent beginning in Latin America. The service device developed by the IIAA involving joint organizations within the structure of the host government, joint contributions to program funds, and strong emphasis on the training and use of local personnel, is one of the most effective mechanisms yet developed for carrying on technical cooperation activities. I believe we should expand this operation in Latin America and take full advantage of this experience in organizing our work in the Eastern Hemisphere.

I propose to bring the headquarters organization of the IIAA in Washington into closer organizational relationship with TCA in the interest of economy and efficiency and in order to take fullest advantage of its experience in the administration of the entire point 4 program. However, I am in favor of retaining the corporate entity of the IIAA, utilizing it as an operating arm for administration of the program.

It is not possible to state definitely at this time what portion of the \$18,000,000 requested for bilateral programs in Latin America in 1962 will be utilized through the IIAA. This will depend upon actual program requests from the governments concerned and upon negotiations to be undertaken when funds become available. It appears probable, however, that from two-thirds to three-fourths of the total Latin-American program in 1962 will be administered through the corporation.

Mr. CHIPERFIELD. Do you feel there was a duplication of effort in those two programs?

Dr. BENNETT. No, sir. I think this: That the institute has carried on since its inception an excellent program. I found it so. We have cooperated together. Mr. Iverson is here. I think he would be the best judge. He could answer that question if we have had conflict.

Mr. CHIPERFIELD. Do you happen to know offhand what percentage is point 4 in South and Central America and what percentage is IIAA, as being asked under this bill?

Dr. BENNETT. The institute program in the bill which we have, under which we are operating now, out of 35,000,000, 5,000,000 was for the IIAA. We added to that—I mean voluntarily, after consultation with Mr. Iverson and visiting to the field—we added to the program of the institute \$2,740,000 in round numbers.

There is no conflict. In fact there is the closest cooperation and coordination.

Mr. CHIPERFIELD. Thank you very much, Mr. Chairman.

Dr. BENNETT. I will file this with the committee.

Chairman RICHARDS. If you all could not get along together, what would happen? Who would decide the differences?

Dr. BENNETT. I cannot conceive of how there would be conflict because it is all one program, working hand in hand. In other words, the whole concept is the same. We are working jointly.

Chairman RICHARDS. Mr. Gordon?

Mr. GORDON. No questions.

Chairman RICHARDS. Mr. Vorys?

Mr. VORYS. Dr. Bennett, you mentioned 32 countries.

Dr. BENNETT. Yes, sir.

Mr. VORYS. In your printed statement it mentions 36 countries. I wondered about that.

Dr. BENNETT. You see, we were authorized to coordinate the existing programs which were then going on. Under Public Law 402 there were programs in Burma, El Salvador, Guatemala, Thailand, and Venezuela. We have no point 4 agreements, but there were programs going on at the time this act was created which we took over and have carried on for this year.

Mr. VORYS. What act were they under?

Dr. BENNETT. This was under the—

Mr. VORYS. Information and exchange?

Dr. BENNETT. This old law, I forget the number. Public Law 402. I forget the title. It is the so-called scientific and cultural cooperation. Smith-Mundt.

Mr. VORYS. Is India under that one?

Dr. BENNETT. No, sir. It is under separate point 4 agreement.

Mr. VORYS. The Smith-Mundt exchange programs—are those carried on separately from your program now?

Dr. BENNETT. We were authorized to carry on the programs which were then in operation.

Mr. VORYS. But since then. The appropriations for the IIAA information and educational exchange program—

Dr. BENNETT. It is still going on.

Mr. VORYS. That is for exchange of persons?

Dr. BENNETT. Yes, sir.

Mr. VORYS. That is quite an extensive program there. Do you have anything to do with that or does that go on parallel to you?

Dr. BENNETT. Will you answer that, Mr. Gordon?

Mr. MARK GORDON. That program is still going on. The same people in the field screen candidates for training in the United States, both under point 4 and under Smith-Mundt. In other words, there is coordination both in the field and back here in Washington.

Our persons, people we bring to the United States for training, normally are in specific fields such as in agriculture, rather than being brought to the United States for general education. They are being brought for specific occupational training in a particular field.

Mr. VORYS. Who is the coordinator?

Mr. MARK GORDON. In each embassy the public affairs officer and his staff does the screening of candidates nominated by the host government. The point 4 representative on the economic staff sits with them in determining which ones to nominate to Washington for point 4 training awards.

Mr. VORYS. Can you tell me how much point 4, or technical cooperation, there is in ECA? Do you coordinate that?

Dr. BENNETT. No, sir.

Mr. VORYS. That is separate?

Mr. BENNETT. That is right.

Mr. VORYS. For instance, we have an item to teach European countries more about production.

Dr. BENNETT. That is under ECA.

Mr. VORYS. And ECA has an exchange of persons, too?

Dr. BENNETT. That is right.

Mr. VORYS. Do you know anybody who knows where we could find out how much money and how many different people are being exchanged in these three programs?

Dr. BENNETT. We can furnish information on our own.

Mr. MARK GORDON. We can on our own and Smith-Mundt.

Dr. BENNETT. We will be glad to file that with you. We can do that shortly.

Mr. VORYS. I wonder if you were planning to file a summary of it, of the various programs.

For instance, you are quite familiar with Mr. Holmes' program. He is very enthusiastic about it.

Dr. BENNETT. Yes, sir.

Mr. VORYS. We find there are about three or four programs going on in India. I wonder if you had here available just a list of what the programs are, a brief description of them, and of the people involved, classified either by countries or by various activities.

Dr. BENNETT. I will be glad to file such a statement with the secretary of the committee.

Chairman RICHARDS. Do you want that for the record, Mr. Vorys?

Mr. VORYS. I just want it for me. I don't know whether you want it for the record or not.

Chairman RICHARDS. Do you want to incorporate it in the record or as an individual report?

Mr. RIBICOFF. I would like to have that information myself. I think it should be in the record.

Mr. VORYS. Going over our hearings, when you say "file it for the record," there is a place in the record "The material is as follows," and it is not there.

Chairman RICHARDS. I think that would be valuable information for the members of the committee.

Mr. VORYS. I would like to see it before it is printed up.

Mr. RIBICOFF. I do not mind a copy going direct to Mr. Vorys as long as eventually I can have it myself. I do not want to bypass the gentleman.

Mr. JAVITS. Are we sure that there will be included not only Smith-Mundt and TCA, but anything that the Departments in any country in exchanges of personnel and technical assistance?

Mr. VORYS. Can you get that or do you know anybody in Government who can get that for us?

Dr. BENNETT. We can try. We can surely furnish it for TCA and for Smith-Mundt.

Mr. VORYS. Is there somebody from TCA who can get it?

Mr. COOLEY. Yes, sir; we can get it.

Mr. VORYS. Are there others besides those three?

Mrs. KELLY. United Nations.

Mr. VORYS. Can we get that?

Dr. BENNETT. That will be included in TCA.

Mr. JAVITS. And the Departments?

Mrs. KELLY. Why can we not get it from the State Department?

Mr. VORYS. I would like to see it. I imagine the committee would.

Dr. BENNETT. If you would like I will make the effort to get the material for you.

Mr. VORYS. Thank you.

Dr. BENNETT. I cannot guarantee complete delivery but I will be certain to furnish you a part of it, and I will do that promptly.

Chairman RICHARDS. That will be inserted in the record if there is no objection.

(For information requested see appendix, p. 1573.)

Chairman RICHARDS. Mr. Battle?

Mr. BATTLE. No questions.

Chairman RICHARDS. Mr. Smith?

Mr. SMITH. Dr. Bennett, can you furnish for the committee a breakdown of personnel?

Dr. BENNETT. Yes, sir.

Mr. SMITH. And if there is any contemplated date, we would like that.

Dr. BENNETT. Thank you.

Mr. SMITH. I request the chairman to have that information placed in the record at this point.

Chairman RICHARDS. If there is no objection that will be inserted in the record.

(The information requested is as follows:)

DEPARTMENT OF STATE,
Washington, August 1, 1951.

HON. JAMES P. RICHARDS,

Chairman, Committee on Foreign Affairs, House of Representatives.

MY DEAR MR. RICHARDS: I am pleased to furnish the attached statement showing a breakdown of point 4 personnel as of June 30, 1951. This statement was requested for the record by Hon. Lawrence H. Smith on Monday, July 30, during the hearings on the Mutual Security Program.

I have sent a copy of this statement directly to Congressman Smith for his personal information.

You will note that the breakdown shows a substantial number of persons employed in Washington at the present time. This has been necessary during the first year of point 4 operation because of the complex job of program planning and administrative planning, the need for developing training programs in the United States for foreign nationals, and the large amount of negotiation necessary with private organizations of many kinds in order to lay the foundation for long-term cooperation with them. I have looked into this matter very carefully and I am hopeful now that we can develop our field programs as projected in the 1952 request before your committee with relatively little increase in our Washington staff.

Sincerely yours,

HENRY G. BENNETT,
Administrator, Technical Cooperation Administration.

BREAKDOWN OF POINT 4 PERSONNEL

On June 30, 1951, 1,467 persons were at work, paid from funds appropriated to finance title IV of Public Law 535. This total includes all field personnel and Washington personnel of the Department of State, including TCA and the Institute of Inter-American Affairs, and of the cooperating departments and agencies.

There were 684 technicians at work on foreign assignments, including 233 people employed by private contractors, the balance being employed by the several technical agencies cooperating in the field operations of the program.

An additional 200 program technicians were employed in the United States engaged in rendering various supporting technical, advisory, and consultative services for those who were working abroad and in rendering technical assistance to foreign representatives directly.

There were also 164 local employees working in the field, including local technical and professional personnel.

There were 410 people in Washington engaged in executive, administrative, planning, fiscal, and reporting activities. Included in this total were full-time and part-time employees, approximately the equivalent of 54 full-time workers, engaged in operating the foreign-trainee program.

A tabulation of field personnel by country is given elsewhere in the record along with the list of point 4 projects now under way.

Mr. SMITH. As I understand your statement, in effect what we are attempting to do in this legislation is to furnish technical assistance to the so-called underdeveloped areas throughout the world. From that are we to understand that these countries are not in position financially to finance the hiring of technicians on their own account?

Dr. BENNETT. In the main that is true.

Mr. SMITH. The amount is not so very great?

Dr. BENNETT. No, sir.

Mr. SMITH. That surprises me when you say that they are not able to take care of a technical-assistance program of this kind. We can buy brains any place, can't we? Certainly they ought to be in a position to do the same thing.

Dr. BENNETT. The difficulty, of course, I think, is in organization. You take, for example, in most of the underdeveloped areas, you could name any of these with whom we work, you will find illiteracy is high, the national income is quite low, and the whole concept is to build up the economy of the country.

Take Ethiopia. I refer to it only because it is fresh on my mind. In Ethiopia the country has been shut off from the world. The majority of the people are in poverty, they are illiterate, the national income is low, and the need of the country is so great for education, for health and sanitation, and for the improvement of agricultural production per acre, and likewise for each man who works the soil, and that is true in Bolivia; it is true in Paraguay; it is true in India. I know of none of the countries with whom we have entered into agreements that that is not the case, where the countries themselves are poor from the standpoint of the individuals and from the standpoint of the governments likewise.

Mr. CHIPERFIELD. Will the gentleman yield?

Mr. SMITH. Yes.

Mr. CHIPERFIELD. In these programs you go down to such detail. I have Ethiopia before me. You are going to furnish in one program there five field hoes and six garden hoes. They could buy five field hoes or six garden hoes without going clear over to America and bringing them from here. It seems so to me, at least. What have you to say about that?

Dr. BENNETT. Of course, as Mr. Holmes pointed out to you in his testimony about the plows for India, you must see something better before you know better. I have been in the fields in Ethiopia within the last 10 days where boys were down on their knees with a crooked stick with two little points on it like that, of metal, hoeing the ground.

I have been out in the fields where they were plowing, just this last week, where they were plowing with a crooked limb and with just a

straight piece on it. In fact, I got out in the field and tried to plow with one myself.

If any of you have ever undertaken a difficult job, you try that—a couple of bullocks with a primitive yoke pulling a crooked limb to scratch the ground with a crooked plow and a straight stick to hold it by.

The point is that you have to make a beginning. You have to begin where they are and use what they have. It is hard for us, gentlemen, to realize. It is difficult for any of us to realize the gradual evolution that has come in agricultural equipment in our own country. It is hard for us to know that it just comes step by step. You do not go by a single bound. The program is just one of leading them along as fast as they can go.

Mr. SMITH. We are looking to the improvement of the economic status of these people, are we not?

Dr. BENNETT. That is right.

Mr. SMITH. We were doing the same thing under the Marshall plan. We poured billions of dollars into Europe—getting back to an old theme of mine now—yet we find that we actually have not been raising the standard of living in Europe very much; notwithstanding, we are going to pour a like number of billions in this program with the same kind of result we were getting there?

Dr. BENNETT. This is quite a small program. I think you might say it is a shirt-sleeves, grass-roots program. The amount of money which we have had is negligible. We are beginning at the bottom, where the people are, with the simplest things we know.

For example, most of the wheat of the world is harvested with a little sickle, the hand sickle the length of this gavel, with people on their knees. It has been demonstrated that you can straighten that out into a straight blade, put a handle on it and let a man stand up and he can do eight times as much work.

Why they have not thought of it themselves, I do not know. But we must remember that the wheel has never found its way into central Africa, as yet. You can go anywhere in the Far East or the Near East and you find the bullock still furnishes the draft power.

The procedures are practically the same all over these underdeveloped countries, with the most simple things. The program which is point 4 is not an expensive program. It is just a plain grass-roots program beginning where the majority of people are. They are farmers.

Mr. SMITH. Is there any termination date in this bill on this program?

Dr. BENNETT. The program itself, we work ourselves out of business in a comparatively short time.

Mr. SMITH. How long a period do you think a short time is?

Dr. BENNETT. Frankly, the point-4 program was set up as a simple program to share with these people the advances which we have made. The presumption is that as they develop we ourselves gradually come out of the picture. That is the reason that I have said it is primarily a training program.

When Mr. Holmes gets through with the training of his boys in India—and I think he told you, he told me, that in a matter of 10 years India should be a self-sufficient country instead of having to depend, as they have, on the outside in recent years.

Mr. SMITH. I hope you are right, Doctor, but I have a fear that it will be ad infinitum.

Dr. BENNETT. My own concept is that if we share the knowledge which we have, teach men to start with what they have, and use it and produce more—you cannot have more if you do not produce more, and I have been dealing with farm situations throughout the years. I have been in the extension program practically since its beginning in this country.

I do not see anybody here who has lived since long before the turn of the century. I know one man in the room who was here when the century turned; 50 years ago in this country we certainly had a primitive agriculture, comparatively.

The Georgia stock, the bull-tongue plow, and the bull sweep, the old-time blue Kelly turning plow, the simple tools we had, we were able to cultivate 25 or 40 acres of land.

Mr. SMITH. How did we get out of it?

Dr. BENNETT. We got out of it just step by step. That is the thing we are trying to do with these people, not bounce them from where they are, or vault them, but carry them by easy steps.

Mr. SMITH. Who carried us?

Dr. BENNETT. The fact of the matter is that our roads in this country were built by borrowed money from Europe—I mean our railroads—and that was the beginning of transportation. The pioneer spirit carried us along, of course. The financing of the American operation could not have been carried on with the great transportation system which opened up the great agricultural areas by our own funds alone.

In fact, it has been just slow evolution. We can wait on that for the other countries, but they are the best customers we have. They furnish us practically half of the imports which we have of raw materials. They will take from us over 50 percent of all our exports.

The truth is that right now we are beginning; take a little country like Liberia, where we are working. Iron ore is coming from Liberia to this country right now to add to our needs. They are producing rubber in great quantities. They are producing cocoa.

The fact is it is good business to develop our customers and our associates and allies in the free world, and this program is a part of the effort of our Government to share our technical skill and our scientific knowledge with them. In fact, in the last 50 years more progress has been made in the science and technology than had been made in previous hundreds of years, but unfortunately the advances were made in a limited area, a part of Western Europe, the United States and Canada, and Australia.

The result is that we have this accumulated knowledge of how to produce more. We have to begin with the land. That is where the new wealth all comes from, either in the form of minerals, oil and gas and the like, or primarily from this top soil from which we take our crops. And the only way these under-developed areas can have more is to produce more.

That means to produce more for each measure of land. It means to produce more for each pair of hands. And that is the only way they can have more. Since they are our customers, our friends, they import from us and they export to us.

We are dependent upon them and they are dependent upon us. The average income in these areas is less than \$100 per year. To illustrate, we are trying to get capital to go into these countries. We have encouraged the investment of capital there. But when you go into a country where they have, as they do in these countries in Africa, millions of cattle, and consequently millions of hides, when we encouraged a man to put in a shoe factory, tanning the hides and making the shoes there, he was very enthusiastic. But when a survey was made and he discovered that the average income was only \$70, he said that would be putting the cart before the horse. Let's wait a little while until the income of the people comes up.

That is what we are trying to do, to increase the productive power of the underdeveloped countries and to increase the productive power of each pair of hands on the farms of these countries, and in that fashion we think that progress can be made.

They cannot do it themselves.

Mr. SMITH. Thank you.

Chairman RICHARDS. Mr. Carnahan?

Mr. CARNAHAN. No questions.

Chairman RICHARDS. Dr. Judd?

Mr. JUDD. Dr. Bennett, the thing about your testimony that pleases me most is that obviously you understand what this committee had in mind when it prepared and backed the Technical Cooperation Act. Your emphasis on training and sharing of know-how, and the very things that have made possible here the remarkable development which the gentleman from Wisconsin has referred to, is precisely what we wanted this program to do, and you obviously understand it.

I notice that you say that your projects provide for the employment of over 1,200 technicians.

Dr. BENNETT. That is right.

Mr. JUDD. That is American technicians?

Dr. BENNETT. That is American technicians.

Mr. JUDD. Are you contemplating the hiring of qualified personnel in the countries themselves? That is, here is a boy from Abyssinia, Iran, China, or some other place, who has been trained in the United States. He is just as good as an American trained in the same university. In some respects better, because he knows the people and the language and people of his own country. Are you contemplating hiring such a man in your program or having him used by the local government in cooperation with you?

Dr. BENNETT. They will be taken care of by the local government and cooperate with the American technicians.

Mr. JUDD. Then you will not be hiring people except Americans?

Dr. BENNETT. That is right.

Mr. JUDD. Is your greatest shortage American money or is it the right kind of technicians and personnel?

Dr. BENNETT. Frankly, the universities of the country have cooperated with us. The land-grant colleges of America have pledged themselves to help in the program. I have met with the deans of the land-grant colleges and have their assurance of cooperation. They are cooperating with making men available. In fact, we are building up this great pool of personnel. It looks difficult and it looks like it would be robbing the country, but it is not. Every univer-

sity and college in the United States is making a small curtailment in personnel due to the decline of enrollment, which is slight, on account of the draft and on account of the graduation of so many of the boys who have been benefited under the GI bill of rights. I have been assured the cooperation of President Fred, of the University of Wisconsin, for example; of the State colleges of every State in the Union. I have met with them in a body as they were here in Washington.

Mr. JUDD. Are you familiar with the work that Cornell University started more than 30 years ago in connection with the University of Nanking, whereby Dr. Love and Dr. Meyers and some other agricultural experts would go to the University of Nanking for a year at a time in exchange for some Chinese professors who came and taught in Cornell?

Dr. BENNETT. Yes, sir.

Mr. JUDD. You are planning projects of that sort?

Dr. BENNETT. Exactly. That is a demonstrated method.

Mr. JUDD. Those agricultural research and education projects during the last three or four decades have done most of the groundwork, developed the basic information, sorted out the best techniques and discarded the others. You can now use this basic information to move ahead at a much accelerated rate. Is that not true?

Dr. BENNETT. Exactly. That is exactly correct.

Mr. JUDD. Do you find this: That when you set out to produce more food the people have to have better health?

Dr. BENNETT. Exactly. That is the reason that we are trying to build up these projects jointly. In Egypt, for example, the projects are being built in this fashion: They are doing it themselves, their own money. They have three programs in one. They can be found like in every county seat building a rough V-shape. On the left, agriculture. In the center, education. On the right, health.

I think one of the most impressive things that I have ever seen in my life is in the delta of Egypt. They have a local sculptor who has worked out a monument of three young women, one holding the cornucopia, production; one holding the open book, education; and one holding this insignia of the physician, age old, on the right. These three are there in front. It is a beautiful piece of statuary. Then, right back of them, are these three buildings joined together in one: production, agriculture, education and health. They go hand in hand.

I am not so certain that these peasants in Egypt have not out of their cooperation come up with an idea that ought to be a world-wide concept. They have to go together.

Mr. JUDD. But it was not those peasants who had discovered that. The foreign mission boards learned that long ago. They originally set out to try to save souls. They found they could not save many souls until the bodies were in better condition. And they could not get that without better education. Furthermore, they discovered another step was necessary. You do not get much better education and better health and better food production until you have better local government and community organization. Irrigation, for example, depends upon community decisions as to how the water is going to be divided and where the dikes are to be built.

Health also depends a lot upon better local government and working together to handle communicable diseases and inspection of food and milk and so forth. So that a fourfold program dealing with the whole man and the whole community inevitably follows starting out on any one of these courses. In the last analysis, the answer to the question of why did we make such progress here and other countries didn't, lies in the basic philosophies of the government.

I read that a preacher was kicked out the other day because he said America had to share its wealth with the world. Now, if sharing the wealth of America would solve other people's problems, I would be in favor of it. But it cannot. What they need is the secret of our wealth and health—why our people have created it and so many others have not. The secret is the philosophy of government and life and social organization that prevailed here—the right of the individual as against that of the family, the clan, the class, or the state.

I congratulate you on the exposition that you have given us. I think this program in the long run carries greater hope for the kind of world we all want to live in, than all the rest put together. They are, in fact, all holding operations to give you a chance to do your job.

Dr. BENNETT. Thank you. That is my feeling exactly. I appreciate your statement.

Mr. GORDON (presiding). Mr. Ribicoff!

Mr. RIBICOFF. Do these technicians live with the people in the country, or do they set themselves apart with a group of Americans or a group of westerners?

Dr. BENNETT. They live with the people. The whole concept of our approach is this: That you cannot come to say "Listen to me, listen to me," but you must come with an approach of "Let's try this, it has worked somewhere, and try it together." Mr. Holmes, who appeared before you, lives with the people, works with the people. He does not ask them to do anything that he will not do himself. That is the biggest trouble that you have with the young people who have been educated from foreign countries and sent to this country for education, rather, in our schools. Most of them want a black-coat job when they get back.

It has been most difficult to get the educated man out in the fields doing the work. They want to tell somebody how to do it. Consequently, in the indoctrination course which we give those who go out from here, in this period of a month they spend together, we try to stress the very point that you have in mind. They have to live with and work with the people on a common level of equality. If you cannot do it you cannot effectively carry out the concept of point 4.

Mr. RIBICOFF. You are to be congratulated because I think this can be one of the greatest influences to be contributed by the United States. Do you also find in going out to the land-grant colleges, to get them to enlist some of the graduates, that they are enthusiastic to go out in the world and participate?

Dr. BENNETT. They want to do it. I was at the University of Wisconsin about 8 weeks ago. I spent 3 days there. They came to me and I talked to the young people. The Department of Agriculture met with the faculty and with the president. They want to go. Here is what they are insisting: Do not make us wait until we have had long years of experience. Let us go and serve an internship, just

like a doctor does, and we will work for the cost of our living, if you will let us go.

I talked to a group of 10 or 12 of the most competent group of people that I have met anywhere, who solicited and begged for the opportunity.

Mr. RIBICOFF. The chances are that if the United States started out on that program you could enlist untold thousands of young people in the United States to do that type of work, could you not?

Dr. BENNETT. Yes, sir.

Mr. RIBICOFF. Do you know of any better way to combat communism than to send our young people who are enthusiastic, as pioneers in other countries, to work with other people and to show what Americans are like and what Americans can really do to help other people in the world?

Dr. BENNETT. I cannot conceive of anything which would mean more in this battle for the hearts and minds of men. I cannot conceive of anything which would mean more to help us win this battle of hope.

Mr. RIBICOFF. So this is a program that should be encouraged that would not cost us very much money to do.

Dr. BENNETT. It is country prices.

Mr. RIBICOFF. You got these agreements going with approximately the 32 countries now. Do you get much publicity about these agreements? Is there much talk about it in the countries, in the host countries themselves?

Dr. BENNETT. Yes, sir. The fact of the matter is that in Egypt last week when I got there they carried me to the Embassy. We had a news conference with 30 representatives of the press. We spent 2 hours together. They were wanting to talk about the program and its implications, and what it could do and what it is doing. When we got through, the Egyptian Broadcasting System wanted me to go down and broadcast and talk about point 4, and how it will operate in Egypt, over the Egyptian Broadcasting System, which I did.

I mean that is the kind of response we get everywhere. The people are enthusiastic every where, in Latin America, in the Middle East, and around the world.

Mr. RIBICOFF. Let's take Syria. They sort of turned you down.

Dr. BENNETT. They turned us down—they postponed it, they shelved it, for the reason that there was difficulty at the moment with their neighbors, and firing was on—not heavy, but there was difficulty, they were very tense. The Government was about to change. My judgment is that Syria, which is the only one of the middle eastern countries remaining without a contract, and Yemen—and by the way, Yemen is interested, from all indications; I think that will come in the near future.

Mr. RIBICOFF. I want to congratulate you on your work and your testimony, Doctor.

Dr. BENNETT. Thank you.

Chairman RICHARDS. Mr. Fulton, any questions?

Mr. FULTON. We have the Chinese students being educated in this country. The problem arises, when the time comes to a close when these students will be off their educational program, what happens to them? As it now stands, under the legislation they are left pretty much to themselves. I understand 27 of them have now turned Com-

munists and gone back to Communist China. Would it help you to have that program now moved over under your supervision in point 4 so that those students could be integrated in this economic missionary work that you are interested in? In leaving these students flounder, they go off the end and there is nothing for them to do.

Some of them felt that they had to go back to China and become Communists to get by. If we were just training Communist technicians in that program, some of us would not have voted for it. My question is, could you integrate that program, which is a separate program, under this point 4 program?

Dr. BENNETT. You mean use the Chinese to train technicians? I think from the standpoint of national policy some program should be worked out to use them because as you point out they cannot go home unless they embrace this philosophy of communism. I think national policy would demand that some program be worked out for them.

Mr. FULTON. Can you work it out within the four corners of the policy that you are administering? We would like to have something like that worked out with you, because in concluding this other educational program, finishing brings these students to a dead end, and we are very quickly coming to it.

Dr. BENNETT. I know many of the Chinese students. I have taught them for the last 30 years, I mean some of them, from the various programs, from the funds from the Boxer endowment, and they are high-class people who have come to us. They are the cream of the crop. I would be glad to undertake it. I am certain of this: From the standpoint of national policy, we can't afford to just turn them back. We cannot afford to do it from the standpoint of national policy as I view it.

Mr. FULTON. Could you come up to this committee with a suggestion of how these Chinese students could be fitted under the point 4 program, with a recommendation as to type?

Dr. BENNETT. I will be glad to discuss it with my associates and come back to the committee with our judgment.

Mr. FULTON. Thank you.

Mr. GORDON. Mr. Bureson?

Mr. BURESON. I have no questions, thank you.

Mr. GORDON. Mr. Javits?

Mr. JAVITS. I want to join my colleagues and commend you on a fine elucidation of your position and what seems to be the rudiments of an excellent job. I think your figures need straightening out. They are clear as to the \$4 million which would go out of the Latin American program to the Organization of American States, and to the United Nations, but not clear with respect to what will go to the United Nations out of title 2, the Near East, and title 3, Asia. There apparently the amounts which are earmarked for the UN would come out of individual country allocations.

I do not want to take your time or mine now extracting that from the list of country allocations we have. I think we should have that furnished for the record.

Dr. BENNETT. Representatives of the United Nations are here. I think that that can be done. We will be glad to do that.

Mr. JAVITS. So that we will know what countries' allocations contain the United Nations allocations.

(The material referred to is as follows:)

It is anticipated that a small part of the technical assistance proposed under the Mutual Security Program will be furnished through multilateral agencies. We plan to make available to the Organization of American States \$1,000,000 and to the United Nations and the specialized agencies an amount not to exceed \$12,000,000.

If a total of \$18,000,000 is actually utilized in this manner the amount involved in bilateral programs would be reduced by a corresponding amount. To make up the \$18,000,000, the proposed program under title I (Europe and DOT's) would be reduced by \$342,000, title II (Near East and Independent Africa) by \$3,744,000 and title III (Asia and the Pacific) by \$4,914,000. The amount of \$4,000,000 for multilateral programs in Latin America is already shown separately.

The bilateral program proposed for title II then would be reduced to \$1,258,000 and for title III to \$257,588,000. The estimated distribution of these amounts by country is being furnished to the committee separately.

The country distribution of amounts to be allocated for multilateral programs will be determined by the UN and specialized agencies in connection with their total program plans.

The distribution of technical assistance funds among the UN and the specialized agencies at the present time is determined by the UN Economic and Social Council on which the United States is represented.

Mr. JAVITS. Are we taking all the young people now that are really needed overseas, or are we not?

Dr. BENNETT. You mean are we sending as many overseas as we should?

Mr. JAVITS. Right.

Dr. BENNETT. No, sir; and the only reason for that is that it takes 90 days for clearance. We just have not been able to clear them fast enough to meet the demand.

Mr. JAVITS. We have a bigger demand than we are supplying?

Dr. BENNETT. A far greater demand than we are able to supply up to date.

Mr. JAVITS. Do you have a money problem?

Dr. BENNETT. So far we have gotten on very well. We have tried to live within our budget. We have sought to follow the will of Congress in the handling of these funds.

Mr. JAVITS. When I say do you have a money impediment, I mean are you refraining from sending people to staff these programs because you do not have the money?

Dr. BENNETT. Not yet; no, sir. We have had enough, so far.

Mr. JAVITS. Do you see enough in this program that we are discussing now so that you can meet as much of the demand as the mechanical facilities will allow, that is, clearance, et cetera?

Dr. BENNETT. Yes, sir. With the money that is provided for in this act we can meet the requirements.

Mr. JAVITS. Is there any impediment in training facilities; are you deficient in those?

Dr. BENNETT. No, sir. We are getting on very well there. We have had the cooperation of the American colleges and universities. Many of them are taking students, you know, without any cost at all. That is, they are offering fellowships for students here and there. There is a great amount of that. So far we have been all right.

Mr. JAVITS. When a foreign country desires a technician which it is willing to pay for, do you have any way of recruiting such technicians?

Dr. BENNETT. Yes, sir; we are able to do that.

Mr. JAVITS. You run a recruitment program?

Dr. BENNETT. Yes, sir. We are building up—what we are building is a pool of trained people, and getting them cleared by the FBI, so that they are eligible to serve under the provisions of the act.

Mr. JAVITS. I was asking another question, Doctor. I was asking in the cases where the foreign country wishes an American technician and is willing to pay for him, will you help them find one?

Dr. BENNETT. Yes, sir.

Mr. JAVITS. And will you do that?

Dr. BENNETT. Yes, sir. We are doing that.

Mr. JAVITS. Will you give us a forecast which will show us how many people you will have engaged, and in broad categories what they will be doing, by June 30, 1952, if we give you the money that you are asking for under this bill?

Dr. BENNETT. I will be glad to. We will be glad to assemble that and put it in the record at this point if agreeable.

Mr. JAVITS. Do you not consider that an important thing for us to consider it?

Dr. BENNETT. I certainly do. You ought to know and you are entitled to know it.

Mr. JAVITS. You are making a substantial expansion of this program.

Dr. BENNETT. That is true.

(The information referred to is as follows:)

The following estimates have been made of the number of United States technicians required by June 30, 1952, to work abroad under the economic phase of the Mutual Security Program proposed in titles II, III, and IV.

Field of activity:	Number of Technicians
Joint commissions and economic surveys.....	94
Agriculture, forestry, and fisheries.....	1,106
Education and information.....	288
Health and sanitation.....	584
Industry and labor.....	171
Transport and communications.....	172
Mineral resources.....	85
Water resources and other public works.....	100
Government administration and technical services.....	170
Total.....	2,788

The above estimates include technicians to be employed through contracts with private organizations and technicians to be employed by the UN and its specialized agencies with funds made available from this program. The estimates include technicians to be employed by the ECA as well as by TOA for work in these regions.

Personnel required for the ECA European program (title I) are not included.

In addition to requirements for United States technicians abroad personnel will be needed in the field and in Washington for program planning, direction, and administration, for training programs to train foreign nationals, and for general work such as budget and accounting, procurement of supplies and equipment, recruitment, and training of personnel, and for reporting services. For that part of the economic program proposed to be administered by the Technical Cooperation Administration, we estimate a total of not more than 800 persons will be needed for these purposes by June 30, 1952.

Mr. JAVITS. Do you find a dearth of capital in these countries, materially retarding the opportunities which you folks are opening up?

Dr. BENNETT. You mean capital?

Mr. JAVITS. Yes; investment capital.

Dr. BENNETT. Yes, sir; absolutely.

Mr. JAVITS. Can you give us any figures on that which will show us what we ought to be doing about it? How the dearth of investment capital is hampering the activities, the fruition of point 4, and also is it a dearth of indigenous capital or a dearth of outside capital, and, if so, what are the proportions and so on? I think we ought to have some analysis of that so we know what to do on the rest of the bill. There is no use in giving them the finest technical service and then find they cannot do anything with it.

Dr. BENNETT. That is right. I will give you two or three illustrations of what we are doing. For example, in Ethiopia—excuse me for talking about the last one first; I have just come from there—this is my second trip there—they had no insurance company, so they have organized an insurance company with their own capital. The result is that with a little support from the outside taking a part of the stock, they are beginning to build up an insurance company of their own which, as you know in this country, has been one of the great sources of pulling together the local savings of the people. That is No. 1.

Another thing, they have no packing plant, yet they have millions of cattle. I would say between 10 and 15 million head of cattle on the range. I have never seen so many cattle. And by the way, they are in good shape. It is fine grassland. They have millions of sheep, millions of goats, poultry literally by the hundreds of thousands. You meet men coming down the road. Out of Dire Daw we met a group of about 10 men coming to market. They had a pole across their shoulders and they had 12 live chickens on each end of the pole, but no packing plants, no facilities for killing and storing their meats. Consequently, you can buy a steer in Ethiopia for practically the price of his hide, because the hide is the only thing that has value. They kill meat only to eat, today. They have no way of carrying it over.

The Emperor is very anxious to have a packing plant in. We are trying to encourage people to come in who will survey and bring capital into the country for a packing plant. They have everything.

Then coffee; I think the finest coffee that I have ever seen is in Ethiopia. That is where it originated. It is wonderful. But their cleaning facilities are crude and quite limited. They need a technician to come and show them how to process and put it on the market in the best fashion. With the price of coffee over the world, we are trying to induce private capital to go in and help them there.

What I am getting at is that they need capital from the outside, and they need to build up capital within their own countries and make it available together. That is true all over there.

Mr. JAVITS. Will you give us a memo giving us facts and figures on that, especially leading to any support or lack of it on Nelson Rockefeller's recommendation for an international economic development agency of the World Bank?

Dr. BENNETT. I will be glad to do that. I think you would be interested in the fact that the World Bank is backing these governments in an agricultural industrial development bank. They are furnishing a part of the capital. For example, they will put up \$1 million, say, of the capital of a \$3 million bank, and they will furnish the management. That is what they have done in Ethiopia and two or three other countries to which I have been, which is a move in the

direction which Mr. Rockefeller had in mind. It is a crude beginning, but it is a beginning. We will furnish that.

(For the information referred to, see appendix, p. 1576.)

Chairman RICHARDS. Mr. Hays?

Mr. HAYS. Dr. Bennett, with reference to the previous questions, as I recall it, there was the same type of objection raised when Dr. Seaman Knapp, Walter Hines Page, and others proposed the Agricultural Extension Service for our own country, that is, a feeling that the farmers "had to do it themselves"; that there was nothing that the Government could do. Is that a fair statement?

Dr. BENNETT. Yes, sir. It has taken us between 25 and 40 years to get the extension system going. I knew Dr. Knapp and his associates, and I had working with me until they died two of the pioneer county agents of the United States. The fact of the matter is that I have been identified with the movement almost from its beginning. I have associated with men who set up the Extension Service in the United States. It is new. It took us years and years and years to get the farmers to be willing to accept the skill which came from the outside, and then it was only through the chambers of commerce, the women's clubs, and the like, that we were ever able to get the home demonstration work started in the counties of the United States.

Now there is not a county in the United States, so far as I know, where we do not have an agricultural agent and a county agent—a home demonstration agent—as a minimum, and in most of them several. Their work has transformed agricultural production, farm life, throughout the Nation. It was a hard job to get the little sums that we had with which the work was begun.

Mr. HAYS. Is there some significance in the fact that the two most important agricultural programs undertaken by the Federal Government—that is the Morrill Act of 1862 and the Extension Service begun in 1915 when World War I was under way—is there some significance in the fact that both of those programs were begun under the tensions of a war situation? It may be that the people were then aware of their dependency on agriculture, of the need of a new look, you might say, on the basic productiveness of the Nation. I wondered if there might not be some connection.

Dr. BENNETT. I think there is connection.

Mr. HAYS. I do not want to press that parallel too much. But as we look at the world situation with the needs of millions of people for education and skill, it seems logical. Also we have a parallel in the farm-security program which was taken over by the Farmer's Home Administration and which continues as a loan program, soundly conceived, but the initial work was a matter of equipping the underprivileged farmers with knowledge in the simple skills of agriculture. Is that a fair example?

Dr. BENNETT. It is a fair example. And it has paid a hundredfold.

Mr. HAYS. Yes. As a matter of fact, the repayment record of Farmer's Home excels the repayment record of RFC. That is not known generally.

Chairman RICHARDS. Mr. Herter?

Mr. HERTER. Dr. Bennett, would you turn to page 4 of your prepared statement? I would like to ask you a few questions in connection with your method of organization and administration.

In that statement you indicate that the amount of money that you have allocated to different agencies of the Government, some 20 agencies of the Government, approximately, does that mean that when you secure an expert from the Department of Agriculture or Commerce or Interior, or one of these many agents of Government, that you turn over from your funds the money to that agency to pay the salary of that individual?

Dr. BENNETT. That is right.

Mr. HERTER. Then when that individual reports, does he report both to you and to that agency?

Dr. BENNETT. Yes, sir; jointly. We direct this work through them. We keep account through them.

Mr. HERTER. When you direct your work through them, it means that they have to set up in their own department some kind of staff that in turn is going to direct him and receive his reports and take care of the accounts, and so on?

Dr. BENNETT. The thing about it is that in Agriculture you see the divisions are already set up. Likewise in interior. It is a simple procedure. There is no duplication of effort there. It is just the mechanics. The bill contemplated in its wording, as we understood it—and I took it as a directive, and frankly, it is a procedure that brings us this great background of experience of these agencies of the Government.

Mr. HERTER. I am not criticizing it one way or another.

Dr. BENNETT. You want to know if it is duplicating the cost?

Mr. HERTER. That and also the fact that point 4 technical assistance is being administered in a great many other countries not by you but by the ECA under an entirely different plan of organization. In other words, wherever the ECA has a mission I understand they handle the Technical Assistance program, and out of their own funds not out of this appropriation. There every employee is an ECA aide, whether he originally came from the Department of Agriculture or not. He is an ECA employee and is an integral part of the organization.

From your figures you speak of the State Department's share in this under the title "Bilateral Program," \$7 million. I assume under your program here, that you were recruiting from some source or other.

Dr. BENNETT. That is right.

Mr. HERTER. Is Mr. Holmes on your payroll?

Dr. BENNETT. Yes, sir.

Mr. HERTER. You recruited him directly?

Dr. BENNETT. Yes, sir.

Mr. HERTER. When he returned from India?

Dr. BENNETT. We recruited him, and through the Department of Agriculture.

Mr. HERTER. They recommended him to you?

Dr. BENNETT. That is right.

Mr. HERTER. He is not on the Department of Agriculture payroll?

Dr. BENNETT. He is paid out of point 4 funds which we have allocated to the Department of Agriculture to carry out a specific job. That is a part of our payroll.

Mr. HERTER. A man working right next to him might be on the Department of Agriculture payroll?

Dr. BENNETT. If we borrowed them for a time, yes. But they are point 4 employees, just the same as when they are on our payroll.

Mr. HERTER. Mr. Holmes and this gentleman from the Department of Agriculture, when they come to report to Washington do they report to you primarily?

Dr. BENNETT. Yes, sir.

Mr. HERTER. But at the same time isn't there in the Department of Agriculture somebody else who is following all that?

Dr. BENNETT. That is right.

Mr. HERTER. In other words, you have really set up an international agency in each one of these departments with staff members abroad?

Dr. BENNETT. It was already set up. We merely utilized it.

Mr. HERTER. It could not have been set up in all these agencies. The Department of Labor, for example, you have \$350,000 there. Do they have an international branch?

Dr. BENNETT. They have an international organization.

Mr. HERTER. For the ILO?

Dr. BENNETT. That is right.

Mr. HERTER. Going on to the Bureau of the Budget, Housing and Home Finance Agency, Federal Communications Commission, Department of the Army, Post Office Department, Federal Power Commission, Department of the Treasury and so on, most of those you just take a single technician from?

Dr. BENNETT. That is right. Or we send maybe somebody there for training.

Mr. HERTER. But if this means a considerable amount, would it not soon mean that every agency of Government will have a foreign department of its own?

Dr. BENNETT. We do not try to set up departments where they do not exist. The Department of Agriculture has had its Division of Foreign Agriculture for years, at least 10 years or more. I have known of it that long. We merely are availing ourselves of their experience and their operation under the law was to be coordinated with us.

For example, the research in rubber, which is carried on in most of the tropical countries. We take that program over, you see, as part of our program, because it is vital to the welfare of our own Nation as well as to the economy of the nations involved.

Mr. HERTER. At the moment this point 4 program for technical assistance is split between the two agencies, and there have been suggestions made here during the course of the testimony that there should be a single agency to operate the entire thing. Do you want to comment on that?

Dr. BENNETT. Of course, you would expect me to have an opinion on it. It is a matter which has been referred to the National Security Council for recommendation to the President. In the light of that I would rather withhold any statement that I might make.

Mr. HERTER. We are in a rather difficult position. We have had a great deal of testimony from Mr. Rockefeller. We have had the Gray report, the Brookings Institution report, a great many witnesses recommending a single agency. I understand the executive branch of the Government had that report for 6 months and could not reach an agreement on it.

It is difficult to find the answer in a period of a week or so.

Dr. BENNETT. I should say that offhand theoretically it would be wonderful if you only had one agency with which to deal. Practically there are some things that do not mix so well. The point 4 program was set up with a certain objective. That objective was to bring or to share with the underdeveloped areas of the world the advances in science and technology which we have made.

I think had it not been for the emergency which came about by reason of the armed conflict in Korea, that the question would not have been raised. That is my judgment. Because the point 4 program was set up with a concept which is quite simple, and understandable, and direct.

My opinion is that these questions would not have arisen had it not been for the emergency in which we find ourselves. If and when the emergency passes, I feel that there will still be a place for a simple point 4 program to the underdeveloped areas of the world as a separate independent agency. That is my judgment.

Mr. HERTER. I want to thank you for one other statement you made and that is that for this year at least you had as much money as you thought you could spend in getting technicians, and so on. I was very severely criticized last year when I cut the amount down by \$10 million, thinking that the amount that was appropriated for eventually would be ample for the first 9 months of operation, at least as much as you could spend intelligently in the first year of the program.

Dr. BENNETT. We have found it sufficient.

Chairman RICHARDS. Mrs. Kelly?

Mrs. KELLY. Thank you, Mr. Chairman.

Dr. Bennett, one of the provisions of the contract agreement is that the country benefited must report to the United States that it has requested technical assistance from another nation. To date have you received any report? Has any report been received of this from the 36 countries benefited?

Dr. BENNETT. That provision was inserted for the reason that the United Nations' program primarily is involved. Food and Agriculture, World Health, UNESCO, ILO, and the like. We have kept the closest coordination between the United Nations, and we have constant interchange. When a request comes to us from a country, we file with them and they with us, and in that way we have kept it up. In other words, we have kept that close check. That was the reason for the request, to avoid, for example, a request being made for agriculture from the Food and Agriculture Organization, and a like request filed with us. If we did not have that provision then we might go ahead and expedite it, and so could the other. Then we would have confusion. So far we have had no duplication as a result of this provision.

Mrs. KELLY. If any nation gives technical assistance to a country, do they tie up that contract with their trade treaty structure in any way?

Dr. BENNETT. It is primarily the Colombo plan of the British Commonwealth and the multilateral agencies of the United Nations that we have met. We have met no agreements, bilaterally, from the other nations as yet.

Mrs. KELLY. Will you insist, if you do, that you see the contract of that nation?

Dr. BENNETT. Yes, indeed, that is the reason that this is here. That is what we contemplate, to prevent duplication and to be certain that the assistance we render is not just one of a multiple group that is coming.

Mrs. KELLY. Thank you.

Mr. BURESON (presiding). Mrs. Bolton? I do not believe that you have had an opportunity to question Dr. Bennett.

Mrs. BOLTON. Thank you. I am deeply sorry that I had to be at the Capitol and missed the beginning of your testimony. I have one or two questions.

Is there a list that we might have of the many programs undertaken by point 4 in the different countries?

Dr. BENNETT. Yes. That list will be filed as part of the record. (The information referred to is as follows:)

DEPARTMENT OF STATE,
Washington, August 1, 1951.

Hon. JAMES P. RICHARDS,

Chairman, Committee on Foreign Affairs, House of Representatives.

MY DEAR Mr. RICHARDS: During the hearings on the point 4 program before your committee on Monday, July 30, the Honorable Frances P. Bolton requested a list of all of the point 4 programs undertaken in the different underdeveloped countries. Attached is such a list for insertion in the record. This list consists of two parts. The first part shows fields of activity in which projects are under way in each country, the cooperating United States Government agency, and the number of experts at work in the country. The second part is a list of projects we have undertaken by entering into contracts with private organizations.

I have sent copies of this information directly to Mrs. Bolton for her personal information.

Sincerely yours,

HENRY G. BENNETT,

Administrator, Technical Cooperation Administration.

Point 4 field projects in operation as of June 30, 1951

Mrs. BOLTON. Thank you. May I at this moment ask you about Liberia and Libya. What are the programs now in force in Liberia?

Dr. BENNETT. In Liberia we have a widespread program which is a continuation of some that had been begun in the past, and new ones that have been added. Liberia likewise asked for a joint commission of Americans and Liberians to lay out the program for the development of the country. The program is comprehensive in agriculture, education, health, and sanitation, roads and harbors. It is a widespread program and one of the most satisfactory with which we are dealing just now.

Mrs. BOLTON. What about Libya?

Dr. BENNETT. Libya is new. The program is just beginning. In Libya the problem of course is three-fold: first, agriculture. They are not producing enough to meet their needs. It is a country in deep poverty. The need is water, and the plan is to survey the old Roman irrigation projects which were in use centuries ago and which we believe can be restored. It is water.

Then it is a matter of health and sanitation. There is much difficulty with eyes, trachoma, and the like. And then, of course, education, which is practically nonexistent in the country. A widespread program has been requested and is under study. We sent Mr. Hanson there along with Mr. Meier, from Mr. McGhee's staff. They spent some days in Libya and have recommended a fairly comprehensive program which we hope to have in operation within the year.

Mrs. BOLTON. In the water program in Iraq, does that also contemplate reconstituting some of the ancient—

Dr. BENNETT. There was a time under the Roman Empire when the country maintained a population of 10,000,000 or 15,000,000 people in the triangle between the two great rivers. Engineering is being done now, and a loan is being contemplated by the World Bank which looks hopeful.

Mrs. BOLTON. Is that loan only contemplated?

Dr. BENNETT. I think it will be carried out within the year. It is my judgment. Mr. McGhee is here and knows better than I. That is my opinion.

Mr. MCGHEE. The loan has been approved. The development board has been set up to carry it out. They are now waiting on final recommendations of the engineers in London. No actual earth has been moved.

Mrs. BOLTON. It seems that is the focal point in that central area.

Dr. BENNETT. That is right. We have the same thing in central Arabia, below Jidda, for 200 or 300 miles, the remains of the old irrigation system of the Romans abandoned with the fall of the Roman Empire. We have an engineer named Brown who is surveying these possibilities of reopening. If so, an area large enough to maintain a population as large again as now lives in Saudi Arabia can be irrigated and can become productive again.

Mrs. BOLTON. Those who were not very friendly to point 4 are saying to me, "Yes; we understand that point 4 is a very useful bit of mechanism for the Department, because they take all the worn-out people and send them out to the other countries"—as though we were not sending our best people. You would not credit that, would you?

Dr. BENNETT. Not at all.

Mrs. BOLTON. May I then say that that is not so?

Dr. BENNETT. You may say with certainty that that is not so. I will give you an example. I was in Bolivia, and there I met Dr. Winters, who is a graduate of Cornell in horticulture. I went with him to the experiment station which he is directing. I think in any roster of men of science you would find his name, Ph. D. from Cornell with distinction. The work which he is carrying on in the Alto Plano is one of the finest demonstrations and research projects that I have ever seen. At an altitude of between 12,000 and 13,000 feet, he is growing alfalfa, Siberian alfalfa. He is growing vetch. I lifted up the vetch and saw it there as high as a man's head. Kentucky bluegrass. I saw yellow hop clover, the big variety, growing there on the demonstration plots.

His livestock work is equally good. I would say that Dr. Winters would grace any department of agriculture in any land-grant college in the United States.

Mrs. BOLTON. You feel that he is a characteristic type?

Dr. BENNETT. He is illustrative of the fact that we are not sending seconds. We are sending the best that we have.

Mrs. BOLTON. Thank you very much, Dr. Bennett.

Dr. BENNETT. I could give you illustrations without number. I could tell you about the agricultural representative in Peru who certainly has done one of the outstanding jobs in the world. Jack Neale, one of the best county agents, practical, competent, all-around agricultural man, who has transformed agriculture in Peru, and who has the confidence of the Government to the nth degree. I could refer you to Dr. Gandy, who is in charge of the health program in Chile, one of the most competent men that I know in the medical profession anywhere, and what is said about him could be said about his counterpart in Brazil, a graduate of Johns Hopkins.

He and his wife are both physicians. These people have the missionary spirit. They want to go. We are not having applications from the old and worn-out and decrepit. As I explained earlier, the young people who are just graduating are going to go.

Mrs. BOLTON. Thank you, sir, very much.

Mr. BURLESON. Thank you, Dr. Bennett. Are there other questions?

Mr. VORYS. I have a couple of questions. Do you have anybody from Ohio State University?

Dr. BENNETT. Ohio State has a number. We have a number of men from Ohio State University, and I was there just about a month ago, and spent 2 days there. We had a team—I mean, we have had a recruiting team out there. He is helping us with Mr. Holmes. He has chosen two men that we have in process of clearance now, who are two of the top-flight agents in Ohio. Mr. Holmes, I think, is here. He was here.

Dr. VORYS. There are a couple of men from Ohio State on the committee.

Dr. BENNETT. We had a team from Ohio State. I spent 2 days there with the president and his staff.

Mr. VORYS. I noticed one of the large items among the departments is the Federal Security Agency. I wonder what sort of technical assistance they furnish. Is it education?

Dr. BENNETT. Education and public health. They come from that agency.

Mr. VORYS. In the Department of State, who is your boss?

Dr. BENNETT. Well, sir, I have never found out yet. Frankly, I think that I should clarify that statement. The Secretary of State is easily accessible. I see him every week. I meet with the assistant secretaries two or three times a week. The cooperation and good will which I found there has been most comforting. They have in effect given me the freedom of the lodge. I am not tied down, but I am working in effect as an independent agent, attached to the Department of State and having their full and wholehearted cooperation. I talk with the Undersecretary every week and frequently every day, calling him about problems that confront me, and I have had his and the Secretary's wholehearted cooperation. I think in that question that you would be interested in this: The Secretary of Agriculture, the Secretary of the Interior, the Secretary of Commerce, the Administrator of the Federal Security Agency, all of them together, including the Librarian of Congress, straight through, have volunteered

and are most helpful, and the impact of this great group of people and their agencies would make any program in the world successful if we just give it a chance.

They have had the experience and they want to help, and they believe in it. The President likewise has invited me from time to time and has kept check on the program, and is personally interested in its success.

Mr. VORYS. Just one more question. You have been asked about your views on putting point 4 under ECA. I wonder whether you would be willing to take on ECA and administer it?

Dr. BENNETT. I think again I had better pass.

Mr. BURLESON (presiding). Are there any other questions? Dr. Judd?

Mr. JUDD. I agree with you Dr. Bennett, in what you said earlier that it would be unwise, for example to use Indian technicians in India, or Ethiopian technicians in Ethiopia because it is much better to have those trained men employed by their own governments, and putting down their roots in order to stay there. But would there be any firm or absolute prohibition against your using a specialist, for example, who happened to be of Indian ancestry but had particularly good qualifications in a given field, which were needed for 6 months or a year in Libya or South Africa?

Dr. BENNETT. None at all.

Mr. JUDD. You could, among your 1,200 technicians, hire non-Caucasians and non-Americans for particular jobs, could you not?

Dr. BENNETT. Yes, sir.

Mr. JUDD. I think that is wise because very frequently in most of the areas under consideration, they will accept advice from a person who is not a white man better than they will from us. I find that in China people would say "He knows about white people's diseases, but I am Chinese; probable he doesn't know what my insides are like. I don't know whether a foreigner understands our Chinese diseases or not."

Dr. BENNETT. I think that point is very well taken and I am in accord with it.

Mr. JUDD. Thank you.

Mr. FULTON. What function or functions do you have under the FAO?

Dr. BENNETT. FAO and I work together. It was my privilege to be a member of the American delegation when FAO was set up. I have been in close contact with it since then.

Mr. JAVITS. You correlate your programs?

Dr. BENNETT. We work together. Dr. Dodd and I worked together for years before he went with FAO and since he has been the Director General. We have the closest accord. In Ethiopia by agreement the FAO is handling the veterinary work in the animal diseases. All over Africa and all over Asia you have rinderpest. It is not of the violent type. We have to deal with it. They set up the laboratory which they directed at Addis Ababa. It is well administered.

Mr. JAVITS. You suggest that we continue the support of the FAO program under the United Nations as well as the continuation of the point IV program which you administer?

Dr. BENNETT. I would. I would continue the help to these United Nations agencies multilaterally and likewise to the Organization of American States. I would do that because I think it is good judgment.

Mr. HERTER. In that connection, where you have \$13,000,000 for multilateral agencies, how much did you allocate for FAO?

Dr. BENNETT. This year?

Mr. HERTER. Yes.

Dr. BENNETT. \$12,900,000 for the United Nations, and \$1,000,000 for the organization of American States, with this proviso: that the United Nations raise an additional \$8,000,000, which would give them \$20,000,000 for the multilateral agencies, and that would mean that you would double the activity of each of the agencies. You would double the activity practically. This percentage will not carry straight through. It will practically double the food and agriculture, world health, UNESCO.

Mr. HERTER. You did not make the determination as to how much of that money should go to FAO, ILO, and so forth?

Dr. BENNETT. No, sir, but I sat with them, we discussed it and they get 20 percent—20 percent goes to FAO, of the \$20,000,000.

Mr. FULTON. Should that not be done directly by Congress when contributions are made?

Dr. BENNETT. I would have no objection to it. The allocations, however, are recommended by the UN Economic and Social Council on which the United States is represented.

Mr. FULTON. Do you know that on the floor in the last few days there was an amendment passed limiting contributions to any international agencies to approximately one-third around 30 percent of the total budget?

Dr. BENNETT. I know there was such an amendment. But I should tell you this: We allocated \$12,000,000 with the understanding that it be paid when \$8,000,000 had been paid in in proportion. Up to date we have paid only \$8,000,000.

Mr. FULTON. Would you then have us continue in this bill, indirect contributions through your point 4 agency to the United Nations agencies?

Dr. BENNETT. Yes; I would like to do that, because it will give us a better chance to correlate our work, in agriculture, in health, and in education and all these multilateral agencies.

Mr. FULTON. I believe that you have made a good point, that they are excellent customers of ours. In Pennsylvania, there is a saying that a man who has bankrupt customers lives in a tumble-down house.

Mr. BENNETT. That is true. We were producing in 1940, 30 percent of the manufactured goods of the world. At the end of 3 years from the year we are in right now, we will be producing 50 percent of the manufactured goods of the world. That is not my figure. But it is reliable. There is a possibility of a great productive nation being smothered under the wealth of its own production, unless we can have outlets. And our little program is going to our friends and teaching them how to increase the earning power of each pair of hands. That is the only way you can increase the national income. That is the only way that you can do it.

Mr. BURLESON (presiding). Dr. Bennett, I assure you on behalf of the committee that we have not only enjoyed your informative discus-

sion but by your personality and by your statements you have engendered a great confidence in your work. We have all looked forward to having you here, and I know everyone has thoroughly enjoyed it.

Mrs. BOLTON. You are just a breath of fresh air, Dr. Bennett.

Dr. BENNETT. You are very kind. I have one question on the FBI investigation which delays us a little. We do not want to do away with it. We merely want a slight amendment to the present plan of operation. We cannot contract with a man until the FBI investigation has been completed and he is cleared, although he is just as good a citizen as any others.

Mr. FULTON. If you have Mr. Hays sponsor an amendment I am sure it will go through.

Dr. BENNETT. This is already in the draft bill. It gives us an opportunity to employ, as other agencies of Government have. This was just a little slip in this bill which deters us from entering into a contract with a man until after the FBI has completed the investigation and he is certified to us.

Mrs. BOLTON. I understand that that puts you on the same basis as the ECA.

Dr. BENNETT. That is all right. That is what we want.

This is my first appearance before a congressional committee.

Mr. SMITH. You are doing all right.

Dr. BENNETT. I want to express my appreciation for the courtesy that you have extended to me. I had wondered how it would be. You made it so easy and friendly that I want to express my personal appreciation.

Mr. BATTLE. If you do as well after you get to be an expert as you did this time, you will be all right.

Mr. BURLESON (presiding). The committee is a little allergic to experts. You have disarmed us.

Mr. SMITH. It is unfortunate that this was not an open session.

Mr. BURLESON (presiding). That occurred to me also during Dr. BENNETT's testimony.

The committee will adjourn until 10 o'clock tomorrow morning.

Whereupon, at 4:43 p. m. the committee adjourned, to reconvene at 10 a. m., Tuesday, July 31, 1951.

(The following were submitted for the record:)

STATEMENTS SUBMITTED BY HENRY G. BENNETT BEFORE THE HOUSE COMMITTEE ON FOREIGN AFFAIRS IN SUPPORT OF THE MUTUAL SECURITY PROGRAM

NEAR EAST AND INDEPENDENT AFRICA

I am Henry G. Bennett, Administrator of the Technical Cooperation Administrator in the Department of State. I am responsible for the administration of the technical cooperation or point 4 program which was authorized in the Act for International Development (title IV, Public Law 535), enacted by the Congress in June 1950.

In September 1950 the Congress made available appropriations totaling \$34,500,000 to carry out the purposes of this act. We have used these funds for technical cooperation programs in the Near East and Africa, in Asia and in the American Republics. The proposal which you now have before you would authorize the continuation and expansion of these existing point 4 activities as one part of a comprehensive mutual security program.

I am going to discuss today the present and proposed programs in the Near East and North Africa. The region consists of Iran, the near-eastern Arab States of Syria, Iraq, Lebanon, Jordan, Egypt, Saudi Arabia, and Yemen, the State of

Israel, and the three states of Libya, Ethiopia, and Liberia in northern Africa. Later I will be back to talk with you about the programs in southern Asia and in the American Republics. I understand that there will be an opportunity at the conclusion of your consideration of the American Republics program for me to review the multilateral phases of the technical cooperation program—the United Nations program of technical assistance and the activities we have authorized through the organization of American States—and following that an opportunity for me to give a general summary of the total point 4 program. At that time I would like to tell you about some of the basic principles underlying the technical cooperation program. I will briefly outline the plan of administration we are following and the reasons for our doing so and discuss with you the great possibilities which, in my opinion, this approach offers in terms of building real strength in the underdeveloped countries and strong ties of friendship with the United States. I am, of course, prepared to go into these general matters whenever the committee wishes.

You have heard Assistant Secretary McGhee describe the tense political situation in the Near East and the general objectives and nature of the economic program proposed for this region. Admiral Duncan has discussed the military and strategic significance of the region.

I am going to confine myself to a discussion of the economic needs of the region, the specific program that was already under way during fiscal year 1951, and the program that is planned to meet those needs in fiscal year 1952.

The proposed program for fiscal year 1952 for this region totals \$125 million. This includes \$50 million as the United States contribution to the United Nations program of relief and rehabilitation for Arab refugees, and \$75 million for programs of economic and technical aid, of which \$3.8 million may be administered through the UN Technical Assistance Program. A program of this magnitude is considered essential, as Mr. McGhee has indicated, because of the urgent need for improving economic conditions in the region.

The fundamental problems in this area, as in all of the less developed countries with which we are now cooperating under point 4, is the miserable economic lot of the masses of its people. We will not have peace and stability in the Near East until we help them to increase their food production, to wipe out widespread curable disease, reduce illiteracy and give the peasant hope for himself and his family. We must help them to meet their urgent economic needs and to realize more fully the great potentials that do exist in the area. Not until then will these countries be strong allies in the free world nor friendly and prosperous partners in the world of trade.

This sprawling region has an area of 3,818,000 square miles or over 2 billion acres. It is occupied by 77 million people. Average annual per capita incomes range from \$385 for Israel to about \$40 in Yemen and Saudi Arabia. In most of the area about 90 percent of the people are illiterate. Life expectancy is about 30 years. The infant mortality rate is about 200 per 1,000 as compared with 32 per 1,000 in the United States.

Most of this vast area is desert. Only a very small percentage of the land is now under cultivation. Yet about 75 percent of the people depend for their livelihood on agriculture. Farming methods are extremely primitive. Food production is far below its potential and fluctuates widely because of erratic rainfall. Hunger is a real problem. It seems obvious therefore that a program of economic development must concentrate heavily on agriculture.

There are vast areas of potentially fertile land and water for irrigation, capable of further development. Large tracts in the Tigris and Euphrates area now are fallow. They supported much greater populations in ancient times and could again be used for farming, the hot climate makes possible two or even three crops a year.

It is estimated that the present cultivable area of Iraq can be at least doubled and the part now in use made far more productive by projects for flood control, irrigation, drainage, mechanization, and agricultural services. Plans for bringing this land into use begin with control of the Tigris and Euphrates Rivers. In Lebanon the major natural resources is the Litani River. This water, properly conserved and utilized, could provide abundant supply of low-cost electric power—power to increase pump water for irrigation, power for industrial expansion and power for towns and villages. In Syria the proper utilization of water resources from the Euphrates and other rivers could add 1,450,000 acres of irrigated farmland to the 575,000 which now exist. Ethiopia possesses rich agricultural resources which could produce meat and grain for export to importing countries in the region and to Western Europe.

Of equal importance are the improvements in agricultural production that can be stimulated through our present and proposed programs at the grass roots level in existing rural areas.

During the 10 months since funds were appropriated for the Technical Cooperation program, projects have been initiated in every one of the countries in this region except Yemen and Ethiopia. General point 4 agreements have been signed with all but Yemen and Syria. Projects totaling \$1,031,001 made up the program which had been authorized at the close of fiscal year 1951. One hundred and eighteen United States technicians have been authorized in these programs and 40 were already on the job in the field. They are from a number of United States agencies, illustrating the use of technical resources throughout our Government in this cooperative program. In addition we have made arrangements by contract with private organizations and firms, to supplement our Government activities.

These programs in the Near East and Independent Africa represent a variety of approaches to the basic problems of the area. In Iran we have begun our largest single program in the region—an integrated rural improvement program aimed at helping the village population initiate better farming methods, better water supplies, and insect control, and schools for primary and vocational education. We believe this program will have a rapid and beneficial effect on the welfare and the attitude of several million Iranians. Since this program is quite a typical example of the point 4 program which we expect to initiate elsewhere, I would like to give you a somewhat more detailed description of this one operation. Our program in Iran is aimed at the general improvement of the conditions of the rural people, who make up 80 percent of Iran's population of 17,000,000. Most of the rural population lives in small villages and work on the surrounding land. In the fiscal year 1951 we have initiated a rural improvement program, including activities in agricultural training and extension, health, basic and vocational education. The significant element of the rural improvement program is this integrated approach to individual rural communities, with our teams of technicians working with Iranians to bring about a balanced improvement in these major fields within each village.

In carrying out this program of rural development, we are using the technical resources of the Department of Agriculture, Federal Security Agency, and the Department of Labor. We have contracted with the Near East Foundation to extend this community development work, since this organization has been successful for years in this kind of work on a smaller scale and is completely accepted by the Iranians. We have also contracted the services of three universities in Utah which are providing technicians to cooperate in those provided by Government agencies. This is truly a cooperative program using the technical resources and skills from these diverse groups.

A separate phase of our program in Iran has been the successful program of locust control, directed at preventing the destruction of crops rather than increasing production as in the rural improvement program. The Government of Iran, faced with the worst locust plague in 80 years, sent us an emergency appeal for help. Within 10 days we had flown from this country to southern Iran a crew of 11 spray pilots and mechanics, an outstanding entomologist, 8 small spraying planes and a supply of the new insect poison Alarin. The Iranians had themselves organized an effective ground support organization so that operations could begin at once. This project, successfully concluded, illustrates the ability of our long-range program to adjust with great speed to meet emergency situations, the resourcefulness of American business firms and the genius of American research which made this feat of technical assistance possible. And now Iranian pilots are being trained in aerial spraying techniques for future locust control work.

In Lebanon we have a mission studying the possibilities and the means of developing the Litani River Basin, that country's most important underdeveloped physical resource. In strategic Libya, as part of the United States bilateral program, there has been initiated a joint Libyan-American Technical Assistance Service similar to the well-known Services in Latin America, to supplement the United Nations program of economic development in that country by providing agricultural extension demonstration and training services.

In Iraq we have provided an American engineer to the Iraq Development Board which will be concerned with an irrigation plan involving flood control on the Tigris River and water storage work in the Euphrates Valley for which the IBRD has granted a \$12,800,000 loan.

In Liberia, there has been gradually developed a well-rounded economic program, beginning with the late years of World War II and concentrating on agriculture, health, and education. As part of this balanced program, a research program on tropical diseases has been started, a public works program is under way with our guidance, and work on aerial photography and mapping is being initiated to provide a modern basis for systematic economic development. Here as in Latin America, the program of technical cooperation has been in operation long enough to begin to see the results. For example, native plantings of improved cocoa varieties in Liberia are just now maturing and adding their output to short world supplies. Vital rubber exports are also being expanded. These benefits are accompanied by improved health and nutrition of the rural population in the "bush" areas of the hinterland.

Our program in Iran illustrates the use we are making of business firms and of other private organizations. One other example of the use of a private non-profit agency deserves mention. Under contract with the Technical Cooperation Administration, the American University of Beirut, for years the leading educational institution in the region and the source of much of the trained professional personnel in local government and educational circles, is initiating an especially designed training program to serve the area in the practical sciences of nursing, midwifery, agriculture, and public administration. We expect this program to rapidly produce trained native leaders and workers who will be the nucleus of an ever-expanding circle of technically competent personnel, enabling these countries to progress more rapidly through their own efforts.

United Nations programs in the Near East and Independent countries of north Africa are likewise of importance in the total picture. In this area, as in other parts of the world, there is coordination between United Nations and United States activities. Information is exchanged and consultations are undertaken with regard to projects planned in order that maximum use may be made of available resources and possible overlap or duplication avoided.

Because of its concern with the settlement of the Palestine problem and the establishment of Libya as an independent state, the United Nations has a very active interest and a special responsibility in this region. In addition, we believe that the United Nations and the participating specialized agencies, through their technical assistance activities under the expanded program, are making and will continue to make a real contribution to the economic development of the entire area and toward the well-being of its peoples.

The United Nations Relief and Works Agency for Palestine Refugees in the Near East has undertaken a major responsibility in the region through its program for reintegrating the Arab refugees. Due to the close relationship between the refugee reintegration program and economic development, this agency is also serving as a focal point for the coordination of all UN technical assistance activities in the Near East.

The UN General Assembly has stressed the need for early action in extending technical assistance to Libya. Accordingly, the United Nations and the specialized agencies are collaborating with the UN Commissioner in Libya and the administering powers in developing projects in order to insure that priority is given to Libya's most urgent needs. On the basis of comprehensive surveys, long-range development programs are already under way.

In Iran, outside the Arab world, the United Nations has recognized the importance of assistance at this time through the inauguration of a number of programs. In this country very special efforts for satisfactory coordination have been undertaken by United Nations and United States agencies, both at headquarters and in the field.

Technical assistance activities under the United Nations expanded program are being undertaken in each of the Near East and Independent north African countries and this includes all fields of activity of the participating organizations. Among the more important projects for the area are those relating to agricultural improvement and forestry, water conservation and utilization, industrial development, public finance and administration, raising of health and nutrition standards, control of communicable diseases, fundamental education, vocational and technical training, and modernization of transportation facilities. In the first financial period (June 1, 1950, through December 31, 1951), projects involving 300 experts and 227 fellowships, will have been initiated or completed, at an estimated cost of \$2,400,000 to the United Nations and the participating specialized agencies. In addition, six regional projects are being negotiated for this area, three of which will be undertaken jointly by several of the organizations.

The proposed program for this new fiscal year will build upon the small beginning we have made in the Near East during the past few months.

The primary emphasis in the economic program of \$75 million is on improving agriculture. More than half of this sum will be devoted to extension, demonstration, training, and equipment to help these countries produce more food and fiber. Twenty percent of the program will be used to reduce debilitating diseases and to improve the health and productive capacity of the workers. Projects to increase industrial output, to train more skilled labor, and to stimulate basic improvements in transportation, make up a substantial part of the proposed program, followed by aid to the development of water resources, vocational education, and government administration.

We estimate the program for this region will call for the services of 834 technicians and will enable us to bring 910 persons to the United States or to appropriate centers within the area for training. While this number of technicians looks large, we have several resources to fall back on. Technicians will be provided by all the United States departments and agencies participating in our program, by land-grant colleges, voluntary agencies and private business, and by the United Nations. These men will be backed by all the technical resources at the disposal of these organizations. Technicians from other countries will be available under the United Nations. What we are proposing is a cooperative program combining and bringing to bear all available technical skills on the economic problem of this region.

I would like to describe very briefly the types of programs which we have in mind for each country. These programs have not, of course, been formally agreed upon with other governments as yet. However, they are designed to supplement the local governments' high priority programs of economic development, and are related to prospective local investment plans on IBRD loans wherever possible.

The bilateral program proposed for Iran totals \$24 million. It is composed of one group of projects designed for rapid completion and immediate impact on economic and social conditions. These projects are largely concerned with transport to permit more adequate internal distribution of goods at reasonable cost, more water systems for small towns, and some importation of consumers goods to generate local currency for further development work. An expansion of the existing rural improvement program, with extension and demonstration activities in agriculture and related undertakings in housing, vocational education, sanitation and disease control, constitutes a second group of projects requiring a longer time for completion, but essential for long-run development.

The Israel program totals \$23.5 million as proposed. It is designed to supply Israel with equipment and a limited number of experts for basic developmental projects in agriculture, power and port development which Israel cannot finance because of its balance of payments position.

For the Arab States taken together, a total program of \$23.5 million is estimated to be necessary. The country programs within this group all emphasize agricultural improvements. However, the diversity of local problems is reflected in the proposed programs to meet these needs.

Most of the projects proposed for Iraq will serve as a basis for subsequent investment development made possible by oil royalties. These initial projects include expansion of model villages on newly developed land distributed to small landholders, rural health and agricultural programs, improvement of the roads and of types adapted to alluvial flood plains, the training of mechanics, surveying of mineral potentialities in northern Iraq, and contribution to the cost of building a dam on the Euphrates to increase irrigation and to prevent floods.

The program for the little country of Jordan is aimed at improved methods of soil and water use and conservation, expanding the current program of cleaning and repairing the old Roman cisterns still used by the nomadic peoples of the area for their water supply. Other projects in addition to agriculture include a laboratory for testing soils and plant diseases, promoting the development of light industries, village health and welfare improvement, a transportation survey and a small consumers goods program.

In Lebanon the program includes chiefly agricultural and irrigation projects to increase the amount of irrigated land and to expand agricultural production on existing cultivated land. Other projects are directed at improving highways and reducing trachoma and malaria.

Syria is a country in which our proposed program aims at increasing both the agricultural area and the yields per acre on existing farm land. The presently cultivated acreage, which now represents no more than 12 percent of the

total area, can be greatly increased. The program includes projects for substantial water development as well as agricultural extension activities. There is provision for some building materials for dams and canals, as well as for related construction needs for roads and housing. There is also a small consumers goods program to serve local currency development work.

The Egyptian program is aimed at improving agricultural production through the establishment of an extension service, and by demonstrating improved methods of handling and storing food products to prevent widespread losses now suffered. Health and welfare work in the rural villages also occupies an important part of the proposed program.

The program for Saudi Arabia is intended to provide technical guidance in water development, health improvement, agricultural extension work and government fiscal management. The country has sufficient financial resources from oil royalties to undertake substantial development if these resources are more fully utilized.

Before any significant development work can be undertaken in Yemen, it is essential to acquire much more complete information than is now available. The program for that reason includes provision only for an economic survey and for a small public health program.

Most of the proposed program for Ethiopia is aimed at the development of this country's agricultural potential which is among the greatest of any of the underdeveloped areas. The remainder of the program includes work in health, mineral resources, government administration and basic education, primarily to enable the agricultural development to proceed more rapidly.

The projects proposed for Liberia are largely extensions of those already in progress, and making up the rounded program which has come out of the experience of the Joint United States-Liberian cooperation and has been formally approved as the Liberian plan of economic development. It includes projects in agriculture, public health, basic education, transportation, hydroelectric power development, and government administration.

The program of Libya includes a variety of activities essential to this newly independent state. The main concentration is in agricultural development, and particularly on irrigation, reclamation, water conservation and improved breeding of sheep, through a system of farm demonstrations and extension. Some work is intended in the field of industrial development concentrated primarily on the processing of agricultural products such as olive oil, wool and meats. Activities are also programed in public health, education, roads, and transportation.

The United Nations and specialized agency programs of technical assistance in this entire region are estimated at \$3.8 million for 1952. Until the pattern of bilateral programs becomes clear, it is only possible to say that such international programs of technical assistance will extend and supplement those which have been described for the current year.

In conclusion, I would like to repeat that this expanded program for the Near East and Independent Africa seems the most practical way in which we can attack the basic problems of hunger, ignorance, and disease which are at the root of much of the present unrest. A grass-roots program such as I have described to help each pair of hands and each acre to produce more can do enough to assist the peoples of this region improve their lot that it will create a new spirit of progress and cooperation with the rest of the free world.

I will be happy to answer any questions that you may have on our program.

THE POINT 4 PROGRAM IN LATIN AMERICA

I am Dr. Henry O. Bennett, Administrator of the Technical Cooperation Administration. I am here to support the President's request for \$22,000,000 for bilateral and multilateral technical cooperation programs in Latin America.

The request for the technical cooperation programs in Latin America for the fiscal year 1952 consists of three items, totaling \$22,000,000.

1. Eighteen million dollars to continue the existing bilateral technical cooperation programs, at an expanded rate.

2. One million dollars as the United States' contribution to the technical assistance program of the Organization of American States.

3. Three million dollars as the United States' contribution to the technical assistance program of the United Nations agencies for operations in Latin America.

These three items are needed in order to carry forward a technical cooperation program with those governments of Latin America that need and request our help. The entire program is designed to provide the technical skills that the Latin-American governments need to improve their basic services. It gets at the root of their economic problem, and constitutes the most effective help that we can provide.

The bilateral portion of the proposed program will permit continuation and much-needed expansion of existing programs in 19 of the 20 Latin-American Republics.

The United States has a special interest in the other American Republics. We are directly concerned and interested in the sound development of their economies and in the political stability of their governments. They are our immediate neighbors. The friendship, good will, and cooperation of the Latin-American peoples and governments are important to our welfare and security.

Other witnesses have already discussed the importance of Latin America to the security of the United States. Military aspects of Western Hemisphere's security have been outlined by General Bolte. Military strength in Latin America, as in any area, must rest on a firm foundation of economic productivity and political stability. I need not remind you of the close relationship between the two. That is why we firmly believe we must further develop our cooperative efforts to help our friends carry forward their plans for social and economic progress.

The slightest progress in the economic development of these countries will give us stronger friends and allies and at the same time will be translatable immediately into greater potential markets for the products of United States industry and a greater flow of private investment.

In spite of substantial progress in economic development our neighbors to the south are not as strong a link as they are capable of being in the chain of the free world's defense against Communist aggression. The great masses of the people have a low standard of living. Their stake in democracy is small. They are readily susceptible to the blandishments of Communist propaganda.

Statistical data for almost all of the countries are notoriously unreliable, but there is good reason to believe that in most of them life expectancy at birth is under 35 years. Generally the rate of illiteracy varies from a low of 35 percent to a high of 92 percent. Food shortages are chronic in all the countries except Argentina and Uruguay, notwithstanding the fact that agriculture is the principal occupation of more than 66 percent of the population. Literally millions live their entire life span in the shadow of hunger. Their productive strength is undermined by inadequate or unbalanced diets. Although Latin America today has a population approximately equal to that of the United States, its productive capacity, measured by the sum of the national incomes of all the countries, is only about one-tenth. In 10 of the countries the annual per capita income is less than \$100, and in only four—Argentina, Cuba, Uruguay, and Venezuela—is it greater than \$200. The problem of improving the basic services is fundamental, and its solution is a prerequisite to the effective use of the resources now being devoted to economic development by the republics of Latin America.

Other handicaps to economic development grow out of the geography of Latin America which provides one of the most difficult environments in the world for human development. The attitudes best suited for human habitation have either an excessively rugged topography or an exceedingly dry climate. Enormous extensions of the Amazon Valley in Brazil, the Orinoco in Columbia and Venezuela, the Parana in Paraguay, the Beni in Bolivia, and other lowland valleys become inland seas during the rainy season of the year, and the potential productivity of those lowlands is sharply limited because the soil in most of them is thoroughly leached. These areas are infested by malaria, yaws, dysentery, hookworm, and other tropical diseases at all times. Swarms of insects, especially locusts, emerge periodically from the jungles of the Amazon, the Parana, the Orinoco, the Beni, and the Coco Rivers of South and Central America to devastate the agriculture of surrounding areas. In the highland regions of Ecuador, Peru, and Bolivia, millions of people live in the excruciatingly thin air of 10,000 to 13,000 feet of altitude, with a climate so forbidding and soil so poor that nowhere else on earth, except perhaps in Tibet, does man have such difficult living.

The total acreage under cultivation in all of Latin America is approximately 70,000,000 acres, compared to 415,334,000 in the United States, and just about one-third of this, or 78,000,000 acres is in Argentina. For the rest of the region the

acreage under cultivation totals approximately 155,000,000 acres for a population of about 138,000,000 so that the cultivated acreage per capita is only a trifle over 1 acre, compared to 2.6 acres in the United States. This, of course, does not tell the whole story, for the productivity of agricultural labor and land has been estimated to be only approximately one-fifth that of the United States. In addition, the almost total lack of modern conservative land-use techniques has resulted in destructive agricultural practices that are everywhere bringing on accelerated erosion and soil exhaustion. The agricultural base of the economy is deteriorating at a time when the demand for food by the rapidly increasing population, especially of the cities, is becoming ever greater.

The bilateral programs proposed for fiscal year 1952 will provide for activities in the following general fields in approximately the amounts indicated.

Field	Amount	Percentage
1. Joint Commissions and Economic Surveys.....	\$379,000	2.1
2. Agriculture Development.....	7,363,000	40.9
3. Education.....	2,291,000	12.7
4. Health and sanitation.....	4,501,000	23.0
5. Industry and labor.....	444,000	2.3
6. Transportation and communications.....	702,000	3.9
7. Mineral resources development.....	813,000	4.3
8. Water power development.....	389,000	2.2
9. Government administration and services.....	1,133,000	6.2
Total.....	18,000,000	100.0

This budget will permit us to assist the governments of Latin America to eliminate some of the handicaps to their economic development. In the first place, it will enable us to continue to assist them in developing their experimental and extension agricultural services and thereby introduce modern scientific agricultural practices. The modernization of agriculture is required to provide the essential balance now lacking in the economies of most countries. It is the first step in increasing agricultural production to eliminate chronic food shortages, and to reduce soil wastage and erosion. In the second place, this budget will enable us to continue programs in health and sanitation to develop preventive health measures required to combat effectively the malaria, the dysentery, the yaws, the hookworm, and other diseases that now sap the productive energy of the labor force. It will permit malaria and other disease control work needed to open new areas for agricultural development, and will provide assistance in developing environmental sanitation, so essential as the first step in health improvement. The proposed budget will enable us to continue our cooperation in the field of education. This will provide millions with the tools of learning required to make them effective producers in a modern industrial civilization, and develop vocational instruction for the specialized training of the labor force needed by the expanding industries of the different countries.

Although more than 77 percent of the proposed budget is for the extension of technical assistance in the three basic fields of agriculture, health and education, nevertheless a proper balance requires that we provide help as needed and requested in several other fundamental fields. The proposed program, therefore, provides assistance in setting up the technical services required for effective explorations of mineral resources and the adequate estimate of the potentials of hydroelectric and other power. In addition, the program proposed will allow us to provide assistance as needed and requested in relation to industrial development and labor training, and the more effective organization of government administration. All of these aspects are necessary to provide a rounded program of helping our neighbors help themselves, and thereby fulfill their own aspirations. Such a program will advance our own objective of creating stronger neighbors in Latin America by helping them to provide the basic conditions which will make it possible for private capital, internal and foreign, to carry forward the main job of economic development.

To provide lasting benefits, that development should be balanced. Too much concentration in the development of the extractive raw materials industries will result in boom and inflation during periods when the world demand for raw materials is high, as during World War II and now, and recession and crisis when that demand slackens. In the long run, our interests in trade, and their interest

in a high permanent standard of living, are best served by well-balanced programs of development.

The people of Latin America know that with the application of modern scientific agricultural and industrial techniques, the productive capacity of their lands, their forests, their mines and factories can be increased enormously. They have already proven this in countless ways. Wherever modern agricultural extension services have been organized, as in Peru and Costa Rica, extraordinary increases in agricultural production are achieved. With the conquest of malaria, which DDT now makes possible, large areas of potentially rich agricultural land in certain of the lowland regions can be brought into settlement and cultivation. Iron ore, manganese, and other mineral deposits can be developed. New oil fields can be opened up. Indeed, the entire area is susceptible of being transformed from an area of democratic weakness and potential Communist subversion to one of democratic strength, capable of providing an inner citadel of defense should the need ever arise. This can be done if the technological know-how needed to increase production is applied effectively and on a much larger scale than has been done heretofore.

The proposed technical assistance program for Latin America has its roots in years of experience, for it was here that the point 4 concept was first applied in practice. Much of our knowledge of how to export know-how was developed here. The grass-roots approach which enables the existing cooperative technical assistance programs to reach the people in the small towns, villages, and farms, and makes the program theirs, has been developed and perfected here.

The results achieved by virtually all of our programs of technical cooperation in Latin America have been far beyond the most optimistic expectations. In many instances they have been spectacular.

First of all a most interesting administrative device has been developed for the extension of technical cooperation—the cooperative service or “servicio” organization. Under this arrangement, the government which requests and is granted assistance agrees to create a special division in the appropriate ministry, through which the cooperative program will be executed. This is the cooperative servicio. Normally, the chief of the United States technical mission or field party is designated director of the servicio by the local government. He is thereby given a dual function. As representative of a United States agency, the chief of field party plans the program in cooperation with the minister, and as director of the servicio within the ministry, he is given responsibility for executing the program planned. The personnel of the servicio is made up of a few United States technicians, usually the 4 to 10 members of the United States field party, and a much larger number of national technicians. The operational fund of the servicio is provided jointly by the two governments. At the present time, there are 83 servicios operating in 18 of the Latin-American Republics, 17 in health and sanitation, 9 in education, and 7 in food supply.

A few examples will illustrate other accomplishments. Over a period of 8 years, the cooperative health and sanitation program in El Salvador has developed a national program of public health and environmental sanitation. It selected and trained a group of doctors, in the country itself and in the United States, and these trainees formed the nucleus of a professional staff for the health department. Gradually each year the ministry has assumed an ever-increasing proportion of the cost of the trained personnel, and by 1960 the Department of Public Health in El Salvador was efficiently organized with a full-time trained professional staff of eight public health doctors entirely provided for within the budget of the Ministry of Health.

In Peru the cooperative agricultural development program trained a corps of extension agents, and organized a national extension service. In the highland regions potatoes are the principal crop and the chief staple food of the people. For years production has been decreasing because of the existence of soil insects and blight. The cooperative agricultural program carried out the research necessary to determine the nature of the problem and then proceeded to introduce the use of the appropriate insecticides and fungicides to control it. As a result of this activity, literally thousands of farmers began to use insecticides. The importation of the basic ingredients of insecticides and fungicides increased from 1,150 long tons in 1946 to 2,216 in 1949. The effect on the yields was spectacular in the extreme. The yield increased from about 500 pounds per acre in the untreated lands to about 1,000 pounds per acre in the treated lands on the average and, through the extension service, literally thousands of acres have been treated.

A cooperative survey by United States and Brazilian geologists in Brazil brought to light large reserves of vitally needed high-grade iron and manganese ores in that country. These surveys indicate that there is a deposit of 33,000,000 tons of ore near the Bolivian border, and 7,000,000 tons north of the Amazon River. The average content of these ores is reported to be 45.8 manganese and 11.1 iron. In addition, 1,310,000,000 metric tons of banded hematitic iron formations that have been discovered are expected to average about 55 percent iron and 20 percent silica. This is only one example of the results that have been obtained from the cooperative mineral resources development program in Brazil. Similar results in relation to other metals, e. g., tin in Bolivia, copper in Mexico, and nickel in Cuba, have been obtained through the operation of that program.

The above illustrations together will indicate the extraordinary possibilities for increasing production that are inherent in the technical assistance programs. The countries of Latin America need and welcome this assistance, and there is no clearer evidence of it than the progressive increase in the contribution they have been willing to make to the joint program funds of the various programs. When the programs started, the bulk of that fund was contributed by the United States. Figures on local contributions in fiscal year 1951 are not yet available but in 1950 the contributions by the Latin-American governments themselves averaged \$3 for every dollar contributed by the United States.

After 1947, it became necessary because of lack of funds for some of the programs to be curtailed. By 1949 the number of IIAA programs had been reduced to 24 and those carried on under Public Law 402 had suffered a corresponding reduction. In fiscal year 1951, under the act for International Development, it was possible to increase the number of service type programs to 33, and at the same time initiate or continue a total of approximately 70 other projects in agricultural research, including rubber development, in mineral and water resource development, in labor and industrial training, and in several fields of Government administration. These activities have given needed balance to the existing program, and have made it more nearly commensurate in terms of type, if not in terms of extent, with the economic development needs of the Latin-American countries.

The United Nations and the specialized agencies are also very active in Latin America as is indicated by the large volume of requests received from governments in that area—153 as of June 1951—and the number of agreements concluded for the provision of specific technical assistance under the expanded program—75 as of June 1951. These activities, supplementing United States bilateral assistance, constitute an additional valuable resource in meeting the tremendous needs for assistance to raise standards of living and further economic development in this region, one of the world's major underdeveloped areas.

Comprehensive development programs have been initiated or are being planned by the United Nations and the specialized agencies in many Latin-American countries. Projects cover an extensive range of activities—industrial and economic development, social security, public health, education, modernized transportation. The majority of them, however, relate to agricultural improvement since agriculture forms the basis of the Latin-American economy. The agricultural problems, toward the solution of which these projects are directed, include control of insect pests and animal diseases, improvement of techniques, storing and marketing of grains, soil conservation and irrigation, investment needs of small farmers, and related fields of forestry conservation and utilization, and fisheries development.

Good progress has been made in developing effective methods of coordination between the United Nations and United States agencies in the planning and carrying out of projects so that they will complement one another in an effective manner. There have been, in some instances, joint planning and frequent consultation as well as exchange of information in order to permit the best use of existing resources for technical assistance.

The Organization of American States (OAS) has a primary interest in and responsibility for the multilateral technical assistance programs in Latin America. It has been determined that the OAS can best serve the Latin-American Republics by sponsoring regional training projects that will meet immediate basic needs of these countries. Accordingly, the OAS has left the field of individual country projects open to the United Nations and the bilateral programs with which it coordinates closely. The United Nations and the specialized agencies, however, are also undertaking several regional projects which are in turn coordinated with those of the OAS.

In summary let me say that the program proposed for fiscal year 1952 provides for the continuation of the activities already under way in fiscal year 1951, and permits the expansion of those which are especially essential in relation to our own raw-materials program. In fiscal year 1951 the amount spent for bilateral technical assistance in Latin America was approximately \$11,300,000. The budget proposed for fiscal year 1952 involves an expansion of \$0.7 million over this amount.

More than \$5,000,000 of the proposed expansion will be absorbed by a single phase of the program—that of agricultural development. The reason for this is that at the present time, as indicated earlier in this statement, the shortage of food creates a deficiency that weakens the entire economic effort of Latin America. The rest of the increase requested will make it possible to continue, on an annual basis, the programs initiated in other fields. Among these are health and sanitation, education, mineral and water-resources development, industry and labor, government administration, and the planning work of the joint commissions authorized by the Act for International Development.

The program of technical assistance for which this appropriation is being requested is needed and welcomed by the Latin-American Republics. It is in the interest of the United States to provide this assistance, not only because of our dependence on Latin America for strategic raw materials, and for a valuable market for the products of our industry, but also because it represents the effective application of the good-neighbor policy and of the concept of the point 4 program. It demonstrates constructive democratic leadership at a time when we greatly need the confidence of our friends.

JEWISH WAR VETERANS OF THE UNITED STATES OF AMERICA,

Washington, D. C., July 30, 1951.

HON. JAMES P. RICHARDS,

Chairman, House Foreign Affairs Committee,

The Capitol, Washington, D. C.

DEAR CONGRESSMAN RICHARDS: In view of the long list of witnesses which have kept your committee busy night and day on hearings on the mutual security program, I should greatly appreciate it if you will include the attached statement in your hearings record so that the views of the Jewish War Veterans of the United States of America may have the consideration of your committee and of the House as a whole.

With all good wishes,

Cordially yours,

BERNARD WEITZER,

National Legislative Director.

STATEMENT BY BERNARD WEITZER, NATIONAL LEGISLATIVE DIRECTOR, JEWISH WAR VETERANS OF THE UNITED STATES OF AMERICA

It is a privilege, greatly appreciated, to present the views of the Jewish War Veterans of the United States of America on the Mutual Security Program which you are considering. This program, as outlined in the President's communication to the Congress, is wholly in accord with the stand taken by our organization on many occasions in the past.

We have supported from the start the European Recovery Program, the North Atlantic Pact, the Mutual Defense Assistance Program, and the Point 4 Program. The results already achieved through these programs justify going ahead to the full extent with the Mutual Security Program proposed by the President. At the meeting of the national executive committee, Jewish War Veterans of the United States of America, held in Boston, July 7, 1951, the following resolution was passed unanimously:

Whereas the Jewish War Veterans of the United States of America has consistently endorsed and supported our Government's efforts to bolster the military and economic security of those countries who stand with the United States in defense of freedom and democracy and,

Whereas there is now pending before the Congress a measure seeking an appropriation of \$9½ million to provide the material assistance required to give full implementation to the Mutual Security Program; now therefore be it

Resolved that the Jewish War Veterans of the United States of America urge upon the Congress of the United States the early adoption of the proposed legis-

lation in order that our country's friends in the community of free nations may be buttressed in the common effort of the free world to defend itself against any possibility of Communist aggression.

Prior to our national executive committee meeting, the question had been carefully studied by our organization's foreign affairs committee. Members of the national executive committee who had come from all parts of the country, emphasized that our only real hope of deterring war and assuring our strength to win should war come, lay in a mighty preparedness effort at home and in economic and military aid to those countries whom we can count upon to join with us in defending the free world. It was pointed out, repeatedly, that our foreign economic-aid programs have been the decisive factor in saving Europe from being overwhelmed by Communist infiltration. Confidence and the will to survive have replaced despair. Production has increased and the economy of these nations has improved remarkably, as a consequence of the efforts made by the peoples of those countries—efforts which were stimulated and made possible by our encouragement and by our material aid. Much, of course, still remains to be done and the continuance of our economic aid is still very essential.

What has happened on the economic front gives promise of what will happen on the military front. The response to General Eisenhower's efforts justifies the amounts requested for military aid. The full amount is essential if General Eisenhower is to accomplish his mission. The free countries of the world outside of the United States and particularly the countries of Europe, have not yet rebuilt their production to the point where they can draw out of their own facilities, all that is needed for adequate military defense. The United States can tip the scales with the aid proposed in the Mutual Security Program.

Outside of Europe, from many of the underdeveloped countries of the world, come the materials which are essential to our production and to the production of our friends in the free world.

We serve a double purpose when we give technical or financial assistance to these underdeveloped countries. When we increase their productivity, we create a situation which makes it more difficult for the Kremlin to promote its doctrines which flourish where need and misery abound. Furthermore, with such increased productivity, we have a ready source of supply for those raw materials which we need to carry on our preparedness program to the fullest extent. In other words, our own defense is served by the use of the funds proposed in the Mutual Security Program in these underdeveloped countries just as surely as the funds and military matériel made available to our partners in Europe aid our defense.

The will and the capacity to fight for freedom can be developed to the highest degree only where there is a strong economy to produce, at least, the minimum living needs for the people and the supplies required for the Armed Forces. That is why the economic aid and the military aid must go together. A shortage in either form of aid will certainly be damaging to our effort.

The world situation is critical. It will continue critical until the defenses of the free world are adequate to deter Communist aggression in any form. The Mutual Security Program is a key step forward in our own defense and on behalf of the Jewish War Veterans of the United States of America, I respectfully urge that what we have to defend is too precious for dilatory action or for any penny pinching in the authorization of the funds requested.

UNITED WORLD FEDERALISTS, INC.,
Washington, D. C., July 31, 1951.

THE HONORABLE JAMES P. RICHARDS,
Chairman, Committee on Foreign Affairs, House of Representatives,
Washington, D. C.

DEAR MR. CHAIRMAN: I am very sorry that circumstances prevented my coming to Washington on the day and hour which the clerk of the committee advised me would be available for my testimony on the Mutual Security proposal.

However, he was good enough to advise me that I might mail a statement to you for inclusion in the record, and I am therefore enclosing it herewith.

Sincerely yours,

CASS CANFIELD, Vice President.

STATEMENT OF CASS CANFIELD, VICE PRESIDENT, UNITED WORLD FEDERALISTS, INC.

My name is Cass Canfield. My address is 40 East Thirty-third Street, New York, N. Y. I am a vice president and a member of the executive council of United World Federalists, Inc., an organization devoted to supporting and strengthening the United Nations. I am also chairman of the board of the publishing house of Harper & Bros., New York.

I am appearing before your committee today to testify in support of one feature of the mutual security proposals which are before you—the program of economic aid to underdeveloped areas, commonly known as point 4.

There is tremendous support for this program all over the country. As a publisher I come in frequent contact with the thinking of the American people, and I can assure you that in the whole field of American foreign policy no subject excites the imagination as greatly as this does, and no subject is quite as popular with the reading public or the lecture-attending public. People see in this bold, new program a truly great approach which makes clear to the world America's peaceful and benevolent intentions and at the same time demonstrates dramatically those productive and technological skills which make us a great and formidable power.

For these reasons, I am a little dismayed that in the present bill the point 4 features are not clearly labeled as such, but are scattered throughout the bill in various places. The program which is carried on by the Technical Cooperation Administration in the State Department in cooperation with the other departments of the Government, is certainly point 4. And so also is a good deal of the ECA program in southeast Asia and its program in the dependent overseas territories of Africa. According to the report of the International Development Advisory Board, all of these activities together accounted for the expenditure of nearly \$300 million during the fiscal year which has just ended. ECA programs in the underdeveloped areas differ somewhat from TCA work in that ECA supplies some capital grants and materials as well as technicians. But these are all point 4 in the broadest sense. The excellent work which is done by the Institute for Inter-American Affairs is also point 4, as we use the word, and it has been carried on most successfully for many years. It is now under the supervision of TCA.

All of these point 4 programs have proven themselves. Dollar for dollar they have been the very best bargain that the United States could ever obtain. The few dollars we spend for technicians who show people how to increase their own wheat crop, might cost no more than one shipload of wheat, yet this investment returns dividends year after year. It not only frees the United States of the need to make contributions which it might otherwise make—it earns for us the lasting good will of the people to whom we have given the best kind of help, the help which enables them to help themselves. And it helps to make them strong in a very real sense; strong in materials, strong in health and strong in self-respect, so that they are the more effective allies in peace or in war.

There is still another avenue of point 4 work which we feel is most useful. That is the technical assistance which is made possible through grants to the United Nations and its specialized agencies. The skills which are so desperately needed in underdeveloped areas are not the very highly trained aptitudes of Detroit, but are rather simple carpentry, farming, and manufacturing methods which abound in many countries. We do not have to use our own valuable manpower to teach these skills. The use of a simple plow can be taught to an Indian by an Italian as well as by an American. And when we make these gifts through the United Nations, we are making not one friend, but many. We are bringing together nationals of many countries in a joint venture which will cement the bonds of all of our countries. We are avoiding the accusation of seeking to dominate the world. And above all, we are helping the United Nations to grow into the strong, important and useful agency for world law that we all want it to become.

I hope that when the present bill is disposed of, this Congress will have time and opportunity to return to the point 4 proposal and to discuss it again in the light of the report, *Partners in Progress*, by the International Development Advisory Board. I refer particularly to the proposals for an International Development Authority and an International Finance Corporation, both of which would be related to the International Bank for Reconstruction and Development, which is a UN agency. These are long-range programs, and the basic legislation for them must be started now if it is to bear fruit within the next few years.

I would like to point out also that in addition to the scientific and professional personnel which the point 4 programs are now using overseas, the technical assistance work could be well augmented by working farmers, shop and mill workers, and by other typical United States citizens. These people could participate actively in the community life in other nations and teach the magnificent skills that have made possible the high living standards which we have in the United States.

I have not testified on the other portions of the bill, because ours is a limited-purpose organization. I would like to say in passing, however, that in the present unsettled international scene, the United States has no choice but to build strong defenses and to aid in building the defenses, economically and militarily, of the entire free world. We feel, however, that at the same time that we build our armaments, we should present to the entire world a proposal for what President Truman has called foolproof universal disarmament under world law. We must confer upon the UN additional powers which are carefully limited and defined but which are adequate to prevent aggression and maintain peace.

I say that we should urge this at the present time for several reasons. First, even if these proposals are not accepted, the fact of making them in all sincerity will demonstrate to the entire world that the United States is truly a peace power and the United States is interested in abolishing war. It will be of tremendous value to us in winning the confidence and support of people everywhere. It will provide substance to the message of the Voice of America and greatly heighten its effectiveness. The United States has during the last 5 years, carried on a benevolent and altruistic program of foreign aid which is without rival in history. We have labored constantly for peace, and yet the Russians have succeeded in many parts of the world in convincing people that our intentions are warlike. It is urgently important that we make the world realize that the United States, while building strength, is seeking peace and is planning foundations upon which permanent peace can be built.

I also urge this course because bills like the one we are discussing today, involving the authorization of billions of dollars in expenditures, make it plain that until some method of permanent world peace is devised, the citizens of this country, and indeed the citizens of every country in the world, will have to make tremendous sacrifices. The high American living standard which we now enjoy cannot indefinitely continue if larger and larger portions of our income must go to the tax collector. And yet until a really fool proof UN peace plan is adopted, we cannot afford to drop our guard for a single instant. This is a tremendous dilemma to which I hope the members of this committee will devote their early attention.

EXECUTIVE OFFICE OF THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D. C., August 1, 1951.

Hon. JAMES P. RICHARDS,
Chairman, Foreign Affairs Committee, House of Representatives,
Washington, D. C.

MY DEAR MR. CHAIRMAN: In accordance with our understanding, I am submitting herewith a statement on the organizational arrangements proposed by the President for the administration of the Mutual Security Program.

Sincerely yours,

F. J. LAWTON, Director.

STATEMENT OF FREDERICK J. LAWTON, DIRECTOR OF THE BUREAU OF THE BUDGET

In the course of committee hearings on the Mutual Security Program, there has been considerable discussion of the President's proposal for administering that program. Representatives of the various departments and agencies have dealt with the questions of substance and policy. This statement explains the proposed organization for administering the program, which has been fully discussed with the President.

The principal features of the President's proposal involve:

(1) The continued utilization of the Economic Cooperation Administration for the conduct of foreign assistance programs, and with that end in view, the President has requested that the life of the Economic Cooperation Administration be extended;

(2) The continued utilization of the Department of Defense for the conduct of military assistance programs; and

(3) Continuation of the role of the Secretary of State as the official who, under the President, provides the foreign policy leadership and guidance for the program.

The Mutual Security Program is not a new program. It encompasses economic assistance, military assistance, and aid to underdeveloped areas. All of these activities have been authorized by the Congress and reflect the established policy of the United States Government. So, too, the organization for administering these programs does not represent something novel and unique, but is rather a structure worked out and tested over the past several years.

The Mutual Security Program is the tangible evidence of the determination of this country to assist the other nations of this world to counter threats to their freedom and their lives. It is impossible to conceive of this program as solely economic, or military, or political. If it is limited to just one of these elements, it will not reach the goal which the American people have set for themselves to help those other nations to contain and repel Communist aggression. To do that, we must weld all of the elements of this program into a single instrument.

The needs for this coordination are very real and specific. A goodly share of our economic aid is designed to increase military production to meet military requirements. Military assistance is to be provided only where the recipient countries cannot meet requirements, even with economic aid. Moreover, our assistance programs must be coordinated for maximum effectiveness with all of our other foreign policy and program objectives. Since the Secretary of State is the official under the President whom the Congress and the people hold accountable for the conduct of our foreign relations, he must play the leading role in the administration of this program.

1. How the program will be managed

The economic assistance part of the program has two major purposes. First, it is designed to help allied countries, particularly those in Europe, to increase their military production and to expand their military forces. Second, it is directed to areas where substantial immediate efforts are needed to combat economic conditions which are being exploited or are vulnerable to exploitation by the Communists. These activities require substantially the same kind of organization as the Economic Cooperation Administration has developed during the past several years. Only in Europe will the ECA need to make substantial changes in its methods of operation and consequently organization and personnel. Those administrative adjustments are already being made.

Because we are dealing with a going program, because the ECA has the skill and resources necessary to continue to do the job well, the President has recommended that the life of the ECA be extended.

The military assistance part of the program, involving military planning, provision of military end items, and military training will continue, under the President's proposal, to be administered by the Department of Defense. Nobody, to my knowledge, quarrels with the proposition that the military are best equipped to plan military strategy and tactics, to procure and supply military goods, to follow up on the use of military equipment, and to provide military training.

Technical assistance under the Act for International Development will, under the President's program, continue to be administered in the Department of State. The Act for International Development is a part of the long-term foreign policy of the United States. It is not concerned with emergency economic assistance. It is primarily designed to help the peoples of other countries achieve the advances and benefits which we have achieved in the United States in such vital fields as agriculture and public health. The essential differences between the operations under this program and those proposed for administration by the ECA should not be obscured by the fact that authorizing legislation for both types of programs is sought in the same bill.

2. The job of central coordination

Achieving consistency in these highly complex activities will call for central coordination of the highest order. Under the proposed organization, the Secretary of State, under the direction and control of the President, provides executive-branch leadership in formulating the over-all policy of mutual security in cooperation with other countries. The military strategy is worked out in cooperation with other countries in the North Atlantic Treaty Organization by the Department of Defense with guidance from the Department of State on political issues. Military and economic assistance are then provided to imple-

ment the agreements on political and political and military strategy. The Department of Defense has clear-cut responsibility for formulating the military-assistance program and for administering it. The ECA has a parallel assignment for the economic-assistance program. The Secretary of State provides foreign-policy guidance and coordination. He does this, primarily, by reviewing the programs of the operating agencies to assure their coordination with each other and their maximum contribution to our world-wide security interests.

Except for its programs under the Act for International Development, the Department of State is not a participant in day-to-day administration of economic or military assistance. Those operating jobs belong to the Department of Defense and the ECA. The responsibilities of the Department of State are centered on policy and program leadership on behalf of the President.

The line of responsibility runs from the President through the Secretary of State for foreign policy and program guidance, to the Secretary of Defense and the Economic Cooperation Administrator for program formulation and operations. The Secretary of State, in exercising policy and program leadership, will allocate funds on a program basis to the operating agencies. Allocation of funds by the Secretary of State is the established practice under the Mutual Defense Assistance Act of 1949.

In making allocations, the Secretary of State relies upon the advice of the International Security Affairs Committee. This interagency committee with membership from State, Defense, ECA, and Treasury is not the governing body for the Mutual Security Program. It is designed to facilitate coordination on behalf of the agency heads. The committee gives continuing attention to inter-agency problems of policy and program.

Should the Secretary of Defense or the Economic Cooperation Administrator disagree with the Secretary of State on any matter of policy or program or funds, an appeal can be taken to the President. Quite appropriately, basic responsibility and appropriations go to the President, who is accountable to the Congress and the people for the administration of our foreign policy for international security.

3. United States organization in NATO and overseas

This same pattern is found in executive branch organization for participation in the regional security arrangements of the North Atlantic Treaty. The Secretary of State is the senior representative of this Government on the North Atlantic Treaty Council. Ambassador Spofford sits as Chairman of the North Atlantic Treaty Council of Deputies, which is the continuous working body of the Council. Ambassador Spofford represents the President and receives his instructions through the Secretary of State.

The ECA special representative in Europe represents the United States on the Finance and Economic Board of the North Atlantic Treaty Organization. Representatives of the Department of Defense represent the United States on the Military Committee and the Defense Production Board of the North Atlantic Treaty Organization. Here again, there are clear lines of authority and accountability running from the President to these regional representatives through their respective agency heads.

Within each individual country where economic and military assistance is being provided, the United States Ambassador provides policy and program leadership and foreign-policy guidance to the ECA mission chief and the Defense representative. Within this organization there is a right of appeal all the way up the line to the President.

4. The weight of experience

The proposed organization, with the Secretary of State providing leadership and coordination and the Secretary of Defense and the ECA Administrator responsible for formulation and execution of programs, is essentially like the organization established under the Mutual Defense Assistance Act of 1949. That act likewise involved both military and supporting economic assistance. The House Committee on Foreign Affairs, in reporting favorably on the bill, endorsed the organizational arrangements developed by the administration by which the Secretary of State was given primary responsibility and authority, with operations assigned to the Department of Defense and the ECA (H. Rept. 1263, pt. 2, 81st Cong., 1st sess.). The Senate Committees on Foreign Relations and the Armed Services, in a joint report on the act, declared that:

"In view of the nature of the program, the committees feel that it is logical that the primary responsibility and authority for direction of the foreign mil-

itary-assistance program be lodged in the President and under him the Secretary of State" (S. Rept. 1003, 81st Cong., 1st. sess.).

The committees then went on to endorse operating assignments to the Department of Defense and the ECA. Thus, the administrative arrangements proposed for the Mutual Security Program have already been endorsed by the principal congressional committees in their review of the Mutual Defense Assistance Act of 1949.

5. Undesirable alternatives

You have heard a number of witnesses propose organizational arrangements for this program differing in various aspects from the arrangements proposed by the President. It seems to me that these run counter to the weight of experience. One such proposal would involve the creation of a new super agency to administer the entire program, including control of the funds for military assistance. Another would involve concentrating in the foreign economic assistance agency a large group of activities which are unrelated or only slightly related to the Mutual Security Program. Both of these proposals must be seriously questioned.

The radical proposal to disregard entirely existing organization and establish a super agency to administer the entire program would split responsibility for our foreign policy down the middle and diffuse responsibility for our military policy. The heart of our foreign and military policy is involved in this program.

When anything goes wrong in our relations with a foreign country, the Secretary of State is held responsible. This is inevitable and proper. So long as the Secretary of State must be, and inevitably is, held responsible, he must be in position to conduct our relations with such countries.

It would be a mistake to draw any parallel to the European recovery program in support of establishing a super agency. The ERP involved no military aid. It involved no basic negotiations with the recipient countries by the ECA—for the program was approved by the Congress on the basis of a proposal put forward by the recipient countries after extensive negotiations conducted by the Department of State. Only then was the ECA brought into existence to carry out the program.

Some will argue the benefits of a super agency out of impatience with the delays arising from interagency coordination. It would be a rash individual who would, for example, move ahead in a matter affecting European defense without Defense Department participation.

A super agency cannot ignore the views of Defense on military matters, or the views of the State Department on foreign policy. A super agency could not operate the military portion of the program; that would have to be done by the Defense Department. Coordination is inevitable. If the President himself devoted all his time to this program and made all the decisions, he would still wish to take a full measure of time in evaluating and reconciling the views of the major interested agencies. We are dealing with complex problems of policy and program and not with a simple operating program.

Various recent reports have proposed that there be concentrated in the foreign economic assistance agency a variety of other economic activities. The "Gordon Gray" report recommended a new agency in which would be placed various foreign economic activities. Similarly, the "Rockefeller Board" report recommended the creation of a new foreign economic agency in which various foreign economic activities would be centered. More recently, the Brookings Report to the Bureau of the Budget proposes the transfer of various foreign economic activities to the ECA.

Before discussing the merits of these proposals for centering foreign economic activities, I should like to point out that of the three reports, only the Brookings report was concerned specifically with the organization of our overseas programs. The Gray report dealt primarily with foreign economic policy. It made no special study or analysis of organization problems. The Rockefeller report was primarily concerned with policy in only one area of foreign economic activity, namely, assistance to underdeveloped areas.

I might also add that these various proposals on foreign economic organization cover a much larger legislative compass than is treated in the program presently before the committee. These proposals cover a wide range of statutes dealing with the national stockpile, foreign loans, export control, defense production, and other subjects. In order to legislate the kind of organization proposed by these various studies, it would be necessary to amend these various statutes.

A number of arguments have been advanced before this committee for pulling together foreign economic activities. Because those arguments concentrate upon foreign policy and program, other national policies and programs tend to fade into the background. Given this special focus, the conclusion that foreign economic activities of the Government should be grouped together is almost inevitable. On the other hand, if we view these functions in the broader perspective of their total governmental setting, we arrive at entirely different organizational conclusions.

Export control, for example, is in large part directed toward withholding goods and services to keep them from reaching potential enemy territory. The policy of export control will often clash with the policy of foreign assistance and cannot be subordinate to the latter. The foreign assistance agency should not make the determination as to allocations between competing domestic and foreign demands. Thus, there are compelling arguments against placing export control authority in a foreign economic agency.

Another program proposed for inclusion in a foreign economic agency is the overseas procurement and development of strategic and critical materials. Given the urgency and high priority of acquiring those materials, there is a real advantage in tying together both domestic and foreign operations to that end rather than bringing together related foreign activities. In this way, we can also maintain proper balance between the vigorous procurement of United States mobilization requirements from foreign countries and the economic welfare of those countries.

Indeed, the President has found the need of getting maximum emphasis on our mobilization supply program so great that, acting under the authority of the newly extended Defense Production Act, he is establishing a Defense Materials Procurement Agency to procure and increase the supply of scarce and critical materials both at home and abroad.

Still another activity proposed for a foreign economic agency is the point 4 program for assistance to underdeveloped areas. It is true that the ECA is engaged in economic and technical assistance, including technical assistance to underdeveloped areas. But the ECA has been primarily concerned with emergency economic assistance programs of a larger scale than those carried on under the Act for International Development. The ECA has consistently and deliberately been assigned emergency programs. The Act for International Development is a part of our long-term foreign policy. It is not an emergency program involving operations on a scale which would warrant the establishment of ECA country missions. It should be part and parcel of the tools we bring to bear through our State Department in establishing sound and healthy trade relations in the world on a long-term basis.

There is no actual duplication between the ECA country missions and those of the Technical Cooperation Administration of the Department of State. Only one agency will provide economic assistance in any one country. The ECA will operate where there is a large-scale economic assistance program. The limitation of ECA to emergency programs and the continuation of this longer-term program in the State Department has very distinct advantages in terms of the continuity and coordination of our basic long-range foreign operations.

Aside from the organizational issues involved, it has been suggested that the ECA should be terminated to symbolize the fact that the job for which it was created is largely ended and for various other reasons. Whatever agency is assigned economic assistance, it will have to take over the operations, skills, and resources of the ECA. If a change is proposed which would require the various complicated administrative adjustments attached to closing out one agency and creating a new one, I would say that the administrative headaches and operating difficulties attached thereto argue compellingly against such a move. On the other hand, an approach involving the conversion of the ECA into a successor agency in a manner which will cause no impairment of employee morale, maintain continuity of operations, and permit an easy administrative transition, could not be seriously opposed.

6. The central issues

The President has proposed an organizational pattern tried and tested by experience, and which has been endorsed by congressional committees. It recognizes the essential unity of our foreign policy and programs. It keeps authority and responsibility well defined and moving in harness. It recognizes that the Secretary of State, apart from this legislation, is a key figure in our relations with the rest of the world. It will enable the Department of State to

continue to provide leadership and coordination in administration of foreign affairs, with due regard for the responsibilities of the Department of Defense. It makes good and proper use of the organization of an experience of one of the most successful agencies created in recent times, the Economic Cooperation Administration. It retains ultimate control and direction of foreign policy administration where they were placed by the Constitution—in the President.

Any radical pulling apart and reshuffling of existing organization must cost money and temporarily but severely jolt smooth and effective operations. Unless real counterbalancing gains can be demonstrated—and I cannot see them—then we pay a price in dollars and time and efficiency.

I cannot close without stressing the urgency of the administrative choice which confronts the Congress. This is far more than a decision about lines and boxes on a chart. It will determine whether we may continue to benefit from nearly two centuries of experience with American foreign policy administration. It will determine whether we are to lend credence to the image which our enemies abroad try to foist on the world, an image of a country whose foreign relations are unstable and unreliable. The task of building an American foreign policy administration consistent with sound management, with the tremendous work to be done, and with our system of checks and balances is a difficult and never-ending one. It can best be furthered by adopting the President's proposals.

DEPARTMENT OF STATE,
Washington, D. C., July 31, 1951.

The Honorable JAMES P. RICHARDS,
Chairman, Committee on Foreign Affairs,
House of Representatives.

MY DEAR MR. RICHARDS: As a result of the developments in the course of the hearings and of further information received since the mutual security program was first submitted to your committee, a number of relatively minor changes in the proposed legislation appear to be desirable. These proposed changes have the concurrence of the same departments of the Government which approved the original draft legislation.

1. Section 303 (a) is proposed to be amended to read as follows:

"Sec. 303. (a) In order to provide for the United States contribution to the United Nations Korean Reconstruction Agency, established by the resolution of the General Assembly of the United Nations of December 1, 1950, there are hereby authorized to be appropriated to the President not to exceed \$112,500,000. In addition, unobligated balances of the appropriations heretofore made, and available during the fiscal year 1951, for assistance to Korea under authority of the Far Eastern Economic Assistance Act of 1950, as amended (22 U. S. C. 1551, 1552, 1543), are hereby authorized to be continued available through June 30, 1952, and to be consolidated with the appropriation authorized by this section. The President is authorized to make contributions to the United Nations, out of funds made available hereunder, in amounts not exceeding in the aggregate \$162,500,000 for the United States contributions to the United Nations Korean Reconstruction Agency."

The purpose of the change is to place a ceiling of \$162,500,000 on the amount of contributions that may be made available to UNRRA. Section 303 (a) in its present form would permit contributions to exceed that sum to the extent that unobligated balances of existing appropriations exceed \$50,000,000. It will be recalled that Mr. Cabot was asked about this matter, and testified that such a ceiling would be entirely acceptable.

2. In section 303 (b) (line 21, p. 8 of S. 1762) the words "in Korea" should be eliminated. In its present form, the title of the command is incorrectly described as "The United Nations Unified Command in Korea." Actually, the United States Government speaks as the unified command.

3. The following changes are proposed for section 503:

(a) It is suggested that the first sentence be amended to read as follows:

"Funds made available for carrying out the provisions of title I of this Act shall be available (1) for the administrative expenses for carrying out the purposes of all of the titles of this Act, including expenses incident to United States participation in international security organizations and expenses of domestic programs under the Act for International Development, and (2) for promoting, pursuant to the authority contained in the Economic Cooperation Act of 1948, as amended, in areas covered by this Act, the increased production of materials in which the United States is deficient."

The purpose of this addition is to permit the use of title I funds for strategic-materials development. The need for this stems from the nature of the budget presentation of the Mutual Security Program. ECA, in its presentation to the Bureau, included a sum of about \$55,000,000 for strategic materials development in its title I request. The idea was to use this \$55,000,000 in the title III area as well as in the dependent areas of the title I countries. Apparently no thought was given at the time of the presentation to the statutory restriction on the use of title I funds until after the budget presentation to Congress was frozen by the Bureau, so all the funds for strategic-materials development in all areas is in the title I authorization. Authority to use these funds in other areas than the title I area is therefore necessary if the funds are to be used as planned and budgeted. There is no thought by this change to permit the development of materials except in accordance with authority already contained in the Economic Cooperation Act, particularly sections 115 (i) and 117 (a).

(b) In line 14, page 12 of S. 1762 the word "department" is misspelled—there is an extra "e".

4. In section 505, it is proposed that the present provisions be designated section 505 (a) and a new subsection 505 (b) be inserted in the following form: "(b) Section 110 (a) (1) of the Economic Cooperation Act of 1948, as amended, is amended to read as follows:

"(1) employ persons and engage the services of officers and employees of other departments and agencies of the United States Government, and such individuals may receive compensation at the rates provided for the Foreign Service reserve and staff by the Foreign Service Act of 1946 (60 Stat. 1009), as amended, together with allowances and benefits established thereunder; and . . ."

The proposed amendment of section 110 (a) (1) of the Economic Cooperation Act of 1948, as amended, is intended to do two things: (1) to put ECA and State's TCA on equal footing with respect to employees of the Public Health Service and the employees of certain other Government agencies; and (2) to put all United States Government employees working in foreign assistance missions abroad on as nearly equal a footing as possible with respect to compensation allowances and other benefits.

TCA, under section 413 (a) of the Act for International Development, provides Public Health Service officers' salaries, allowances, and other benefits at the same rates as to officers of the Foreign Service Reserve and Staff. ECA, however, has no special authority to pay Public Health Service officers salaries and allowances beyond those paid them as career officers by Public Health Service under the regulations of the Service. The general counsel of the Federal Security Agency has even ruled that Public Health Service officers may not, in the absence of special statutory authority, have their autos transported overseas by ECA—even though ECA has general authority to transport autos overseas at Government expense. As a result of the discrepancy in the compensation and other payments available to Public Health Service officers working for TCA and ECA, even though ECA has general authority to transport autos overseas at Government expense, it is becoming increasingly difficult to recruit Public Health Service people to work for ECA.

Quite apart from the above situation, ECA is anxious to have all employees working for ECA overseas receive the same salaries, allowances, and other benefits. The existing differences are evidently causing a rather touchy personnel situation at a number of the missions and in the field. The best solution appears to be to permit all Government employees working abroad for ECA to receive pay and allowances equivalent to that given Foreign Service reserve and staff.

4. In section 500, the following changes are suggested:

(a) In the original presentation of the program, section 500 of the draft bill contained two provisions which it is now proposed to delete:

(1) In section 500 (b), all of the last two sentences should be deleted. The explanation for this proposal was given in the testimony of Mr. Ooms and Captain Robillard.

(2) All of section 500 (e), as it appears in the original draft bill, should be deleted. The reason for this deletion was also explained in the course of the hearings on July 30.

(b) In subsection (b) (1), page 15, line 1, the word "such" should be deleted. This will correct a drafting error. It has also been suggested that the word "such" in line 3 of page 15 be changed to "the." This is not as important, but would be an improvement.

(c) A new subsection (e) is proposed, to be inserted after line 16 on page 18, reading as follows:

"Except as otherwise provided by law, no recovery shall be had for any infringement of a patent committed more than 6 years prior to the filing of the complaint or counterclaim for infringement in the action, except that the period between the date of receipt by the Government of a written claim under subsection (c) above for compensation for infringement of a patent and the date of mailing by the Government of a notice to the claimant that his claim has been denied shall not be counted as part of the 6 years, unless suit is brought before the last-mentioned date."

The purpose of this proposal has been explained in the testimony of Mr. Casper W. Cooma.

After these changes have been made, section 500 will read as shown in the attachment to this letter.

B. A new section 514 is suggested in the following form:

"Sec. 514. Any equipment or materials procured to carry out the purposes of this act shall be retained by or transferred to, and for the use of, such department or agency of the United States Government as the President may determine in lieu of being disposed of to a foreign nation whenever, in the judgment of the President, such disposal to a foreign nation will not be in the interest of the United States, or whenever such retention is called for by concurrent resolution by the two Houses of the Congress."

The purpose of this proposal is to make the provisions of section 408 (f) of the Mutual Defense Assistance Act applicable to all countries receiving assistance. Section 408 (f) in its present form applies only to North Atlantic Treaty countries. A few changes have been made in the language of the original section in order to make it appropriate for other areas. The purpose of the section is to authorize other United States Government agencies to use material or equipment, originally procured for assistance to other countries, which is found to be more important to the United States Government.

6. It will be recalled that Secretary Acheson testified before the House committee that there would be no objection to requiring intertitle transfers made under authority of section 501 to be specially reported to congressional committees as in the case of sections 408 (c) and 408 (e) of the Mutual Defense Assistance Act. For this purpose, the final sentence of section 408 (c) could be used without change, as follows:

"Whenever the President makes any such determination he shall forthwith notify the Committee on Foreign Relations of the Senate, the Committees on Armed Services of the Senate and of the House of Representatives, and the Committee on Foreign Affairs of the House of Representatives."

Sincerely yours,

CHARLES A. COOLIDGE,
Deputy Director, International Security Affairs.

SECTION 500

Sec. 500. (a) As used in this section—

(1) the term "invention" means an invention or discovery covered by a patent issued by the United States, and

(2) the term "information" means information originated by or peculiarly within the knowledge of the owner thereof and those in privity with him, which is not available to the public and is subject to protection as property under recognized legal principles.

(b) Whenever, in connection with the furnishing of military assistance in furtherance of the purposes of this Act—

(1) use within the United States, without authorization by the owner, shall be made of an invention, or

(2) damage to the owner shall result from the disclosure of information by reason of acts of the United States or its officers or employees, the exclusive remedy of the owner of such invention or information shall be by suit against the United States in the Court of Claims for reasonable and entire compensation for unauthorized use or disclosure. In any such suit the United States may avail itself of any and all defenses, general or special, that might be pleaded by any defendants in a like action.

(c) Before such suit against the United States has been instituted the head of the appropriate department or agency of the Government, which has furnished military assistance in furtherance of the purposes of this Act, is authorized and

empowered to enter into an agreement with the claimant, in full settlement and compromise of any claim against the United States hereunder.

(d) This section shall not confer a right of action on anyone or his successor or assignee who, when he makes such a claim, is in the employment or service of the United States, or who, while in the employment or service of the United States, discovered, invented, or developed any invention or information on which such claim is based.

(e) Except as otherwise provided by law, no recovery shall be had for any infringement of a patent committed more than six years prior to the filing of the complaint or counterclaim for infringement in the action, except that the period between the date of receipt by the Government of a written claim under subsection (c) above for compensation for infringement of a patent and the date of mailing by the Government of a notice to the claimant that his claim has been denied shall not be counted as part of the six years, unless suit is brought before the last-mentioned date.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C., August 2, 1951.

Mr. Louis Lipsky,
American Zionist Council, New York, N. Y.

DEAR MR. LIPSKY: Upon reading the record of the hearings before the Committee on Foreign Affairs, it seemed to me that three questions were raised upon which a statement from you incorporated in the record might be helpful. These are: (1) Has Israel complied with United Nations decisions in respect of its borders with the Arab States; (2) has Israel opposed United Nations resolutions regarding internationalization of Jerusalem; and (3) what was Israel's responsibility in respect of the flight of the Arab refugees.

Sincerely yours,

J. K. JAVITS, Member of Congress.

AMERICAN ZIONIST COUNCIL,
New York, N. Y., August 6, 1951.

HON. JACOB K. JAVITS,
House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN JAVITS: This will acknowledge your letter of August 2. I appreciate your courtesy in submitting these questions to us and enabling us to present the answers.

I am enclosing a memorandum prepared by the American Zionist Council which responds to the three questions you raise.

Sincerely yours,

LOUIS LIPSKY, Chairman.

I. THE UNITED NATIONS' RESOLUTIONS AND ISRAEL'S FRONTIERS

Question: Has Israel complied with United Nations' decisions in respect of its borders with the Arab States?

Israel's present boundaries rest on formal armistice agreements with the Arab States, negotiated and under the auspices of the United Nations itself. Israel does not hold an inch of territory outside these boundaries, nor does it claim any territory belonging to any Arab States or any part of Palestine now occupied by Arab States.

2. Israel has repeatedly offered to sign peace treaties with her Arab neighbors on the basis of the present boundaries. But the Arab States continue to refuse to negotiate a peace settlement. Despite the armistice agreements, they regard themselves at war with Israel.

THE ORIGINAL UNITED NATIONS' PARTITION RESOLUTION

3. The first United Nations' resolution on Palestine, adopted November 29, 1947, called for the partition of Palestine into two independent states. Jewish and Arab, and a Jerusalem enclave, all to be united by internationally supervised economic union.

4. The Jewish authorities in Palestine—the Jewish Agency and the National Jewish Council—were the only major party in interest that accepted that resolution without qualification or reserve.

5. Under the UN plan, the two states were to have been interwoven, their boundary lines crossing twice and dividing each of the states into three non-contiguous segments, accessible only at the two cross-overs. This division was feasible only in peace. The boundaries would surely disappear in conflict. If the Arabs had accepted the November 29 UN resolution, the separate Arab State would have come into being and those boundary lines would today be in effect.

6. But the Arab Higher Committee of Palestine, led by the ex-Mufti of Jerusalem, and the Arab League declared open war on the resolution from the very beginning. Before the UN Ad Hoc Committee on Palestine on November 24, 1947, Jamal Husseini, spokesman for the Arab Higher Committee, declared: "The partition line proposed shall be nothing but a line of fire and blood."

7. Inside the Jewish area, the Palestinian Arabs began guerrilla warfare the day after the Assembly voted, while Arab volunteers and mercenaries freely crossed the frontiers from the neighboring Arab States and joined the conflict. The mandatory power in Palestine declined to accept the UN recommendations, refusing to help implement them. The United Nations Palestine Commission, blocked by Arab opposition and the mandatory's indifference, never went to Palestine, but reported to the Security Council on February 10, 1948: "Powerful Arab interests both inside and outside Palestine are defying the resolution of the General Assembly and are engaged in a deliberate effort to alter by force the settlement envisaged therein."

THE FAILURE TO IMPLEMENT

8. Confronted with a breach of the peace and armed defiance of an Assembly resolution, the Security Council, under the leadership of the United States delegation, moved to abandon the original partition resolution. It summoned the General Assembly into special session in April 1948. The United States then proposed a new plan for a trusteeship in Palestine, but this, it developed, was acceptable to none of the parties and the Assembly adjourned without a new decision. The mandatory left Palestine on May 14, and the Jewish State was immediately proclaimed, in conformity with the original UN resolution of November 29, 1947.

9. The Arab States attacked Israel from four sides. Jordan moved to capture the eastern part of Palestine, including Jerusalem. Egypt intended to occupy the coastal plain, including Tel Aviv, and also Jerusalem. And Syria and Iraq proposed to divide Galilee and northern Palestine, including Haifa. But that partition of Palestine was defeated by the resistance of the newly created Israel Army. However, the Jordan and Egyptian Armies did succeed in occupying part of Arab Palestine, and they remain there today.

10. The boundaries envisaged in the original partition plan were thus erased by the Arab invasion. The independent Arab State never came into being because its territory on the east and in the center of Palestine was seized by Jordan and on the southwest coast by Egypt. Israel, for its part, gained territory in the fighting. The western Galilee, a rocky and mountainous region, isolated from the rest of Arab Palestine and a salient dividing Israel into two, had been used as a base for Arab irregulars during the fighting, and the Israeli forces captured this area, uniting their divided State. The Israelis succeeded in operating a corridor from the coast to bring food and water to the beleaguered city of Jerusalem. That corridor, essential to Jerusalem's survival, remains in Israel's hands.

THE EXISTING BOUNDARY SITUATION

11. Under the original partition resolution, the area allotted to Israel was about 5,000 square miles. Today, with the addition of western Galilee and the Jerusalem corridor, the area of Israel is about 8,100 square miles. The boundaries which divide Israel and her Arab neighbors in the main follow the truce lines which were in existence when the fighting came to an end in 1948. These boundaries are set forth in the armistice agreements negotiated by Dr. Ralph Bunche, former UN mediator, in compliance with the Security Council resolution of November 16, 1948. While there have been occasional frontier clashes between Arabs and Israelis during the last 2 years, the frontiers have not changed and Israel holds no position in violation of them.

12. Since the signing of these armistice agreements, there has never been a proposal at the United Nations to revise the frontiers or to revert to the 1947 partition boundaries. No such proposal could be seriously entertained for it would first have to overcome the opposition of Jordan which has since annexed eastern Palestine.

13. The Soviet Union, has, on occasion, declared that it still supports the 1947 partition plan in principle, and this line is followed by Communists in Arab Palestine and in Israel in an effort to stir the Arab refugees into revolt against the rule of Jordan and Israel.

14. During discussions with the United Nations Palestine Conciliation Commission at Lausanne, the Arab States proposed that the 1947 partition plan be a starting point for negotiation, but they then went far beyond that by laying claim to east Galilee, to west Galilee, to the northern and southern Negev and to the territory between Jerusalem and the coast. Thus, they would have reduced Israel to a tiny coastal area of about 20 percent of Israel's present territory.

15. But such proposals have evoked no sympathetic response at the United Nations where it is generally accepted that an aggressor is estopped to claim territory lost in conflict he initiated.

16. The Palestine situation has its analogy in Korea. There, a political boundary, the thirty-eighth parallel, like the partition frontier, was created by an act of aggression. The UN has taken the position that the North Koreans cannot reestablish a line they themselves violated. The same principle applies in Palestine.

17. It should be emphasized that Israel holds no territory belonging to the Arab States or beyond the old international frontier of Palestine. On the other hand, two Arab States, Egypt and Jordan, now hold substantial areas in Palestine territory beyond their original frontiers, and a third Arab State, Syria, is attempting to win control over Israel territory in the region of Lake Huleh. It is often said that the Arabs fear Israel's expansion because of Israel's large influx of immigrants and because Israel maintains a large armed force. If these fears are genuine they can best be allayed by peace treaties. Israel has repeatedly affirmed her readiness to enter into peace treaties with her Arab neighbors on the basis of the existing armistice agreements.

THE ATTITUDE OF THE ARAB STATES

18. The attitude of the Arab States has been intransigent from the beginning. In 1947 they were opposed to any plan which might give rise to an independent Jewish state in any part of Palestine. They were determined to establish an all-Arab state in the country and therefore in 1947 they opposed both the majority (partition) and minority (federation) reports of the United Nations Special Committee on Palestine. In early 1948 they opposed the United States plan for a trusteeship. Then they went to war. They agreed to a 30-day truce, but when it expired they renewed the fighting and did not stop until they were compelled to comply with a Security Council order. In the fall of 1948, at the Paris session of the General Assembly, they rejected the Bernadotte plan which would have turned over the entire Negev, the Palestine desert, to Jordan. Throughout they refused to concede that Israel could possibly exist. They would accept no compromise of any kind.

19. In 1948, 1949, and 1950 the General Assembly adopted resolutions calling on Israel and the Arab States to reach a settlement of their differences. Israel has, each time, informed the UN of its readiness to negotiate. For 18 months the UN Palestine Conciliation Commission met in Switzerland in a futile effort to bring about a beginning of peace negotiations. But throughout the entire period the Arab delegations refused even to meet in the same room with the Israel representatives. As recently as December 1950, at the fifth session of the General Assembly, they continued to oppose direct negotiations with the new state.

THE ECONOMIC BLOCKADE

20. Since the collapse of their military effort to liquidate Israel, they concentrate on economic and political warfare, in the hope that they can strangle Israel by economic blockade.

21. Egypt shuts off the Suez Canal. This has been condemned by Dr. Ralph Bunche and has been described by Lt. Gen. William E. Riley, Chief of Staff of the UN Truce Supervision Organization in Palestine, as "an aggressive and hostile act." Israel estimates the total cost of the Suez blockade at \$150,000,000. The United Kingdom, France, Australia, and many other nations have repeatedly protested this interference with international shipping and the issue is now before the UN Security Council. The Egyptian blockade prevents the

passage of crude oil from the Persian Gulf to the British-owned refinery at Haifa. The result is to deny Western Europe the oil supply essential to recovery and rearmament. The situation has become more serious because of the shut-down at Iran. Thus, on August 1, 1951, Sir Gladwyn Jebb, representative of the United Kingdom, told the Security Council that Egypt's stopping of tankers had caused Britain "great inconvenience and considerable financial loss." He said: "I need scarcely remind the Council that owing to other events in the Near East the need for utilizing to the full any available refining capacity at Haifa and elsewhere may well become even more pressing if the supply of petroleum products is to be maintained for great areas of the world, including Western Europe and many countries of Asia."

22. Meanwhile, Iraq refuses to let oil flow through the pipelines to Haifa and, as a result, that refinery operates at only 25 percent of its capacity, using crude oil that is brought by tanker all the way from distant South America.

23. Syria wants to cut off the headwaters of the Jordan, stop the Huleh drainage project, and thus block Israel's long-range irrigation and agricultural development plans. When the Palestine fighting ended in 1948, Israel was in occupation of a strip of Lebanese territory while Syria had crossed its frontier and occupied a strip of Israel's soil in the vicinity of Lake Huleh in eastern Galilee. Israel had no desire to hold Lebanese territory. During the armistice negotiations it agreed to withdraw to the old frontier. It had been given to understand that Syria would do the same. But, after the Lebanese-Israel agreement was signed, Syria refused. After a long and stubborn negotiation, Syrian forces withdrew but a small area of Israel's soil was demilitarized. In this area Israel has been carrying forward a large-scale drainage project for the purpose of curbing malaria, reclaiming marshlands, and facilitating the irrigation program for the remainder of the country. It is this project that Syria has sought to block by military action in recent months.

24. The hostility of the Arab League was responsible for the collapse of the Jordan-Israel peace negotiations. Article 8 of the Israel-Jordan armistice agreement provides that the two states should carry out certain agreements whereby Jordan would open the old city in Jerusalem and the road to the Hadaasah Hospital and the Hebrew University—the great cultural and scientific institutions on Mount Scopus which have now been closed for 3 years—in exchange for similar concessions on the part of Israel. In the spring of 1950, King Abdullah of Jordan was ready to agree to the implementation of article 8, and also to open commercial relations with Israel which would have been a great boon to both states. But he was forced to desist by the threat of expulsion from the Arab League.

25. In the light of this record it is clear that Israel has not been the aggressor in the Near East, and has consistently favored a peace settlement with those Arab States that started the war against it. It does not violate its frontiers which were negotiated under the auspices of the United Nations.

II. ISRAEL AND JERUSALEM

Question: Has Israel opposed United Nations resolutions regarding internationalization of Jerusalem?

26. Israel's position on Jerusalem is in harmony with that of the United States and many western countries in the United Nations. It favors functional internationalization, i.e., an international regime authorized by the United Nations to supervise the holy places sacred to the three faiths. This position, consistently maintained by Israel, was held by the United States, both in 1949 at the General Assembly, when it was a minority view, and in 1950 when other leading powers espoused the same program.

THE ORIGINAL UN JERUSALEM RESOLUTION

27. The original plan to internationalize Jerusalem was embodied in the November 29, 1947, partition resolution. Israel was the one major party that was ready and willing to accept it. The UN Trusteeship Council was directed to draw up a draft statute for the government of Jerusalem. Israel's representatives cooperated with the Council in this task. They believed and hoped that internationalization would insulate the historic city from the conflict which appeared inevitable. But, just as the UN Palestine Commission found it impossible to implement the over-all partition resolution, so the Trusteeship Council abandoned its assignment.

28. In the meantime, Jerusalem was isolated and besieged by Arab forces which surrounded it. In 6 weeks, 1,400 men, women, and children—a staggering proportion, $1\frac{1}{4}$ percent of the Jewish population—were killed in the defense of their city. The international community did not save Jerusalem from disaster. The UN did not move to defend the city. The people of Jerusalem were rescued by young men and women from Israel, who gave up their lives to open the road from the Mediterranean coast and to bring them food and water.

29. While the new city, built largely by the Jewish development of the last century, was able to withstand attack, the Arab Legion forces occupied the old city, the Jewish population of the ancient quarter were driven out, and some 20 Jewish synagogues and shrines were destroyed. The old city became part of Jordan, the new city became part of the State of Israel. Order has been restored to Jerusalem. The people live at peace, and the new city grows rapidly as the capital of the State of Israel.

Functional Versus Territorial Internationalization

30. The State of Israel and the Jewish people of Jerusalem are ready to accept and cooperate with an international regime to supervise the holy places. They believe that the UN can establish an authority to safeguard access to the shrines and to guarantee full exercise of religious rights for all faiths. But they oppose territorial internationalization, i. e., the imposition of foreign rule over the city and the abridgment of the natural rights of the people. They regard this as inequitable and self-defeating. In their view, it is the holy places of Jerusalem, not its area and people, which should be under international supervision.

31. Notwithstanding the failure of 1948, which demonstrated the impracticability of the plan, the United Nations in December 1949 called again for the complete internationalization of Jerusalem and its environs. It directed the Trusteeship Council to implement it. The United States delegation opposed this unworkable plan which was put through by a strong and strange combination of Soviet, Latin American, and Arab States. The Arab States had previously opposed internationalization because they wanted Jerusalem to be an all-Arab city. Defeated in that objective, they then changed their position. However, Jordan, the one Arab state which occupies any part of Jerusalem, has always opposed any kind of internationalization and still does.

32. The Trusteeship Council met in Geneva early in 1950, to draw up a new statute for Jerusalem. But Jordan, the state most directly concerned—for almost all the holy places are inside the old city—refused to permit any United Nations supervision in Jerusalem. It declined to appear before the Council. Israel offered a counterproposal—functional internationalization.

ISRAEL'S PROPOSAL

33. In a memorandum submitted to the Trusteeship Council of the UN in May 1950, the Israel delegation declared:

"(3) In Jerusalem, the holy places of the three world religions are gathered in a unique concentration. These sanctuaries command a world-wide reverence, far transcending their purely local environment. The protection of the holy places and of free access thereto, and the maintenance of existing religious rights, constitute an international trust for which the responsibility of the United Nations should be universally recognized. The Government of Israel believes that the United Nations should be enabled effectively to exercise that responsibility, which should also be expressed in appropriate juridical form.

"(4) Accordingly, any solution which the Government of Israel can commend or support must simultaneously fulfill two objectives: it should satisfy the principle of United Nations responsibility for all matters directly affecting the holy places and free access thereto; and it must leave the population of the city free to express their inalienable national loyalty through the democratic institutions which they have helped to create in Jerusalem and in their own State."

(The main features of the Israel proposals are contained in appendix A.)

34. At the 1950 session of the General Assembly, the Trusteeship Council reported that it was unable to carry out the 1949 resolution. It transmitted Jordan's refusal and Israel's offer. A number of western states—Sweden, Canada, the Netherlands, the United Kingdom—all advocated functional internationalization, along the lines of Israel's plan, which had been widely approved by public opinion all over the world. The United States also took this position. However, no vote was taken on that proposal. Advocates of full internationalization, realizing that they no longer could command the needed majority in the

Assembly, did not seek a reaffirmation. Instead, they urged the dispatch of another mission to Jerusalem, in the hope that the original plan might still be carried out. But even this was defeated. No resolution was adopted. No action was taken.

35. Thus, it is inaccurate to suggest, as do Arab spokesmen, that Israel blocks internationalization. Real progress toward a practical and feasible international regime for Jerusalem's holy places is blocked on the one hand by the opposition of Jordan to any kind of plan and, on the other, by the uncompromising attitude of extreme advocates of internationalization.

III. ISRAEL AND THE ARAB REFUGEES

Question: What was Israel's responsibility in respect of the flight of the Arab refugees?

36. There would not be a single Arab refugee in the Near East today if the Arab Higher Committee and the Arab League had accepted the November 29, 1947, resolution.

37. In any discussion of responsibility for that tragic exodus, affecting so many innocent men, women, and children, it must be kept in mind that the Palestine refugees today would have been living in the independent Arab state or in the State of Israel (where 170,000 Arabs now live in peace with their neighbors), if the Arabs had not rejected the November 29, 1947, resolution and waged war against the resolution and Israel. Recrimination over responsibility will not resettle the Arab refugees nor compensate them for their losses. But since Arab leaders seek constantly to disavow guilt and to fasten it on Israel, the facts must be recorded. The central and incontrovertible fact is that the Arab Higher Committee stimulated, organized, and directed the mass exodus.

THE FACTS OF RESPONSIBILITY

38. The day after the UN partition resolution was adopted in 1947, the Arab Higher Committee launched a campaign of violence against the Jewish community. The road to Jerusalem was blocked off; convoys were attacked; settlement guards were ambushed and killed; roads were mined and settlements isolated; a Jerusalem street was blown up and more than 50 men, women, and children died in the night; a group of young Hebrew university students were massacred on the road from Jerusalem to Hebron; the Jewish Agency in Jerusalem was bombed, with heavy casualties. There was needless retaliation. Innocent Arab men, women and children were slaughtered at the village of Deir Yassin in an undisciplined and needless attack by Jewish irregulars—an incident bitterly repudiated at the time by the Jewish Agency for Palestine. A few days later some 70 Jewish doctors, nurses, and scientists were put to death in a convoy set afire on the road to the Hadassah Hospital.

39. These clashes and counterclashes accelerated the Arab exodus. But it started long before then. It began in December 1947, immediately after the partition resolution, when wealthy Arabs who could afford to leave the country departed in the expectation that they would return after a quick Arab victory. Other Arabs followed the example set by their leaders. Exploiting the conflict, the Arab Higher Committee called on the Arab population to leave the country en masse. This was many weeks before Deir Yassin. The Jews appealed to the inhabitants of Haifa and of the Sharon Plain to remain, for they were eager to avert war and they wanted to live at peace with their Arab neighbors.

40. Thus, when 200 armed soldiers of the Haganah wrested the port of Haifa in Jewish Palestine from Arab forces in April 1948, almost all the 65,000 Arab inhabitants of that city promptly picked up and left, at the command of the Arab Higher Committee. They ignored the appeals of the Jews that they remain. (See appendix B for an official British account of this incident.) They were determined to show to the United Nations that under no circumstances would the Arabs live at peace with the Jews in a Jewish state. But, as Mr. Clarence Pickett, of the American Friends Service Committee, testified before the Committee on Foreign Affairs, the Arab radio at Ramallah called upon the Arabs to get out, promising them they would return within a short period to kill all the Jews and take possession of their property. Events proved this to be a gigantic blunder.

41. There is ample evidence from Arab sources of the fact that the Arab leadership precipitated the mass departure of the Arabs from Palestine. Mr. Habib Issa, acting editor of Al-Hoda, the chief daily newspaper of the Arabic-

speaking community in the United States, described it in his newspaper on June 8, 1951. (See appendix C for translation of his article.)

THE DEMAND FOR REPATRIATION—WITHOUT PEACE

42. When the fighting ended and the UN truce came, the Arab Higher Committee and the Arab States were confronted with the grave consequence of their miscalculation, but they refused to accept it. Charging Israel with the "expulsion" of the Arab refugees, they insisted upon repatriation. They would not discuss resettlement in Arab lands. The very presence of the refugees was an embarrassment. It was evidence of a political and military defeat which the leaders of the Arab States did not wish to admit to their people. Throughout 1948, 1949, and 1950 the Arab States refused to negotiate a peace treaty with Israel, insisting that Israel must first agree to the return of the Arab refugees. In Israel's view this was a demand to commit suicide. Israel could not agree to the return of large numbers of Arab refugees who were not ready to give their loyalty to the new state and who would surely constitute an explosive fifth column should the Arab States renew hostilities. Arab publicists themselves openly urged the return of the Arabs as a potential subversive force to facilitate the second round of fighting for which they constantly called.

43. It should be noted that there has always been a tendency to exaggerate the number of the Arab refugees. It has been variously estimated at between 600,000 and a million. But the total number of Arabs in all of Palestine did not exceed 1,200,000 in 1947. There are now 170,000 Arabs in Israel. Between 400,000 and 500,000 remained in the Arab part of Palestine which has been incorporated into Jordan. Unless one regards all the Arabs now living in Israel and Jordan as refugees, the figure of a million is obviously gross exaggeration. The number of bona fide refugees is actually about 600,000. The fact is that many indigent members of the local Arab populations throughout Palestine and the Arab countries were included in UN refugee relief.

44. Repatriation of a substantial number might have been possible if the Arab States had been disposed to enter into peaceful relations with Israel. Some Arab refugees—a figure estimated at more than 20,000—did filter back. Israel permitted the reuniting of families in certain instances.

45. Eager to break the impasse in negotiations and open the way to peace, Israel made a concrete repatriation proposal in 1949. It had been suggested to Israel by the Palestine Conciliation Commission that if Israel would agree to accept a substantial number of the Arab refugees, the Arab States might do likewise and that could well mean the beginning of a final and decisive solution of the problem. Accordingly, in the summer of 1949, in negotiations at Lausanne, Israel offered to take back 100,000 Arab refugees. But the Arab States rejected the offer.

THE STATUS OF THE ARABS IN ISRAEL

46. It should be pointed out that the Government of Israel has spent large sums for the care of Palestine refugees within its own borders and also to lift the living standards of the entire Arab population inside Israel. It estimates that between May 15, 1948, and December 31, 1949, it spent 3,010,495 Israel pounds for Palestine refugees. In the calendar year of 1950, it spent an additional 903,149 pounds. This makes a total of more than \$11,000,000.

47. On December 6, 1950, Foreign Minister Moshe Sharett of Israel told the Ad Hoc Political Committee of the United Nations of the efforts his Government had made to raise the living standards and to secure the political rights of the Arabs inside Israel (UN document A/AC.38/SR71).

48. He stated that Arab women had voted for the first time in history in Israel's first election. In 1944-45, only 45 percent of Arab children of school age were at school. In 1949-50, 83 percent were at school, the result of Israel's new compulsory education law, and it was expected that the figure would soon rise close to 100 percent.

49. In Jewish areas, the Government paid 60 percent of education expenditures, because it was a tradition of Jewish communities to defray part of the cost. But in Arab areas, the State of Israel bore the entire expenditure. The same was true of health expenditures and the Arabs now had full hospitalization for all costs of contagious diseases. Mr. Sharett also told the committee that before the state was established, an unskilled Arab workman had received 40 percent of the wages paid to Jewish labor. The figure now stood at 85 percent. And there was no differential between the wages earned by Arab and Jewish skilled labor.

50. On July 1 of this year, the Prime Minister's office in Israel announced further progress with regard to the status of Arabs in Israel. According to the Jewish Telegraphic Agency, the Custodian of Absentee Property had decided to release the property of Arabs who were citizens of Israel. The Custodian was prepared to release upon application all movable property and to consider the release of urban real property as well as unfreeze all Arab bank accounts. The government was permitting some 23,000 Arab infiltrates to remain permanently in the country. In addition, it was known that 18,000 infiltrates resided illegally in Arab villages. The report stated that the 170,000 Arabs in Israel included 32,000 living in cities and towns, 120,000 in rural communities, and 18,000 nomads. The Government had carried out pledges of political equality contained in the Israel declaration of independence. It had published its Official Gazette in Hebrew and Arabic, inscribed its currency in both languages, sponsored regular Arabic radio broadcasts and extended the franchise to the Arab population.

51. Over 31,000 Arabs voted in Israel's first general elections and more than 75,000 participated in the second this summer.

RESETTLEMENT AS THE PREFERRED SOLUTION

52. Throughout this period, Israel has stressed that the real solution of the problem is the resettlement of the Arab refugees in Arab lands among their own people, in a culture and economy congenial to their own interests and aspirations. Vast areas of Arab land are available for this purpose. Syria, for example, has an area of about 69,063 square miles with a population of only about 3.4 millions. Iraq, with an area of 116,000 square miles, has a population of only about 4.8 millions. Manpower is urgently needed in both states to carry out long delayed irrigation projects.

53. Moreover, Israel has been taking in large numbers of Jewish refugees. Approximately half—more than 300,000—have come from Moslem lands: Iraq, Yemen, Iran, Syria, north Africa. And many more are on the way. Inasmuch as the Jewish communities are steadily streaming out of the Arab lands to Israel, the resettlement of the Arab refugees in the Arab countries becomes a logical and rational population exchange.

THE PLEDGE OF COMPENSATION

54. Israel has offered to compensate the Arab refugees for their abandoned lands. Such compensation would be paid by Israel into the United Nations reintegration fund and would be used for resettlement purposes. The statement of the Ambassador of Israel before the Ad Hoc Political Committee of the United Nations, on November 7, 1950, is reported in UN document A/AC.38/SR.35:

"With reference to the statement of the director of the agency that large sums would be required for the reintegration of the refugees, he (Mr. Eban) supported the recommendation in paragraph 69 of the agency's report, which proposed that the United Nations should authorize contributions to a fund that would be available for projects of refugee reintegration. His Government was willing to pay compensation for abandoned lands. It was essential that those sums should be paid into the refugee reintegration fund, and it was preferable to adopt collective methods of paying the compensation rather than to attempt to solve the problem by means of individual indemnities."

This proposal was made at the fifth session of the General Assembly, when the Assembly for the first time undertook concrete measures looking to the solution of the Arab refugee problem by resettlement.¹ (See footnote for text of General Assembly resolution.)

55. Ambassador Eban told the Ad Hoc Political Committee on December 4, 1950, that his Government was prepared "to discuss the principles for the assess-

¹ The resolution of the General Assembly of the United Nations adopted on December 2, 1950, declared, inter alia:

"The General Assembly . . .
 "4. Considers that, without prejudice to the provisions of par. 11 of General Assembly Resolution 194 (III) of December 11, 1948, the reintegration of the refugees into the economic life of the Near East, either by repatriation or resettlement, is essential in preparation for the time when international assistance is no longer available, and for the realization of conditions of peace and stability in the area;

"5. Instructs the agency to establish a reintegration fund which shall be utilized for projects requested by any government in the Near East and approved by the agency for the permanent reestablishment of refugees and their removal from relief;

"6. Considers that, for the period July 1, 1951, to June 30, 1952, not less than the equivalent of \$30,000,000 should be contributed to the agency for the purposes set forth in par. 5 above . . ."

ment and procedures for the payment of compensation with the Committee of Experts already established by the Conciliation Commission for that purpose" (UN document A/C.38/SR69). The UN's representatives are now making this study in Israel. Israel's position on this issue has a direct bearing on its request for financial assistance. Ambassador Eban referred to his Government's intention to pay compensation in his note to the Secretary of State requesting aid. He said:

"10. In addition to the burdens imposed by immigration and defense, the Government of Israel has undertaken to make its due contribution toward the solution of the Arab refugee problem in the Near East. It has declared its willingness to support the reintegration fund to be established by the United Nations by paying into it funds accruing from compensation for abandoned Arab lands, on the understanding that such funds will be used for the permanent resettlement of Arab refugees in conditions which would conform with their own welfare and with the ultimate stability of the Near East. Under this arrangement, which has been publicly announced in the United Nations, Israel is probably assuming a heavier financial commitment in the Arab refugee problem than any other single member government, notwithstanding the fact that the problem itself was actually created in the course of a deliberate attempt to destroy Israel's existence, as a result of which Israel sustained heavy and widespread material damage." (March 22, 1951.)

30. In 1948 at the United Nations, the emphasis in discussions of the Arab refugee problem was on repatriation. Even at that time, however, the UN qualified its declarations on repatriation by limiting return to those who were prepared to live in peace in the State of Israel. The continuation of the Arab war negated the possibility of peaceful repatriation and today there is little doubt that the majority opinion at the United Nations favors resettlement as the primary solution. Statements of leading United Nations delegates at the fifth session of the General Assembly reflected this view. (Some excerpts may be found in appendix D.)

57. Fortunately, in the interests of the refugees and the restoration of peace to the region, the Arab States have indicated a reversal of their position within recent months. Following the last meeting of the Arab League, it was reported that they were prepared to cooperate with the United Nations in the reintegration program. This is a step forward and there is now the promise of a final solution.

APPENDIX A

ISRAEL'S JERUSALEM PROPOSAL

The main features of the Israel plan for Jerusalem, submitted to the United Nations Trusteeship Council in May 1950, are as follows:

"(a) A statute should be adopted whereby the rights of the United Nations in respect to the holy places in Jerusalem would be derived directly from the General Assembly and accepted by all parties concerned. The authority of the United Nations in the holy places would thus take statutory form and not depend upon a contractual agreement.

"(b) There should be appointed a United Nations representative or such other organ as may be found appropriate, for the discharge on behalf of the United Nations of the functions prescribed regarding the holy places in Jerusalem. This representative or organ should constitute an independent authority deriving its powers solely and exclusively from the General Assembly itself and exercising those functions in the international right without dependence on any individual government or accreditation thereto.

"(c) The United Nations representative thus appointed (or the United Nations organ thus set up) should carry out the following main functions in respect of the holy places in Jerusalem: viz, supervision of their protection; adjudication of disputes between communities as to their rights in the holy places; the maintenance of existing rights in connection with the holy places; the initiation of their repairs; assurance of their exemption from taxation; questions relating to the maintenance of free access subject to the requirements of public order; facilitation of pilgrimage movements; issuing of reports to the appropriate United Nations organs on all the above matters.

"(d) The definition of holy places as laid down and applied up to the termination of the mandate shall continue to prevail (Cf. UN Map No. 220, November 1949). All governments and parties concerned should negotiate on the definition and demarcation of these places in order to achieve agreement on the exact sites within which the above-mentioned functions of the United Nations representative shall operate.

"(c) Apart from their statutory sphere of authority concerning the holy places in Jerusalem, the United Nations representative or organ could negotiate agreements with both governments concerned, in conformity with the resolutions of the General Assembly, for the protection of holy places located outside the city of Jerusalem. The United Nations representative or organ could also negotiate, if required, on behalf of any church organization submitting views or claims with respect to religious buildings, institutions or property."

APPENDIX B

The following is a photostat of an official British Police report on the flight of the Arab refugees.

THE ARAB EXODUS

10/PS.

District Police Headquarters,
(C. I. D.)
P. O. B. 700, Haifa
28th April, 1948.

SECRET

A/A. I. G., C. I. D.
Subject: General Situation—Haifa District.

The situation in Haifa remains unchanged. *Every effort is being made by the Jews to persuade the Arab populace to stay and carry on with their normal lives, to get their shops and businesses open and to be assured that their lives and interests will be safe.* On the other side the evacuation goes on and a large road convoy escorted by Military and containing a large percentage of Christians left Haifa for Beirut yesterday. An estimated number of 700 has been given for this convoy and evacuation by sea goes on steadily.

10/PS.

District Police Headquarters,
(C. I. D.)
P. O. B. 700
Haifa.
28th April, 1948

SECRET

A/A. I. G., C. I. D.
Subject: General Situation—Haifa District.

There is no change in the situation in Haifa. The Jews are *still making every effort to persuade the Arab populace to remain and settle back into their normal lives in the town.* Another convoy left Tيره for Transjordan and the evacuation by sea continues. The quays and harbour are still crowded with refugees and their household effects, all waiting an opportunity to get a place on one of the boats leaving Haifa. Some families have lived and slept on the quaysides for several days waiting a chance to get away. Life in the New Business Centre has returned to normal with all shops and businesses functioning.

The steam trawler "TADORME" renamed the Haganah ship "OPERATION CASTLE" was brought into Haifa harbour at 5.30 a. m. with a total of 559 persons on board made up of 332 males, 182 females and 45 children. The illegals were transferred in the usual manner to the Empire Comfort and the Empire Rest. During the transhipment the illegals twice refused to move from their ship and had to be got on the move again by naval and marine personnel. The transhipment was completed at 11.15 a. m. and the illegals left for Cyprus.

APPENDIX C

THE ARAB LEAGUE AND THE PALESTINE REFUGEES

My Habib Issa

(This article was translated from the Arabic original in Al-Hoda of June 8, 1951. Al-Hoda is the chief daily newspaper of the Lebanese emigrant community in the United States. Mr. Issa is the acting editor of the paper.)

As soon as the British had publicly announced the time for their relinquishment of the mandate and their withdrawal from Palestine, the Arab League

began holding meetings and calling conferences, and its general secretary, Abdul-Rahman Azzam Pasha, published numerous reports and declarations in which he assured the Arab peoples and all others that the occupation of Palestine and of Tel Aviv (the virtual Jewish capital) would be as simple as a military promenade for the Arab Armies. Azzam Pasha's statement pointed out that armies were already on the frontiers and that all the millions that the Jews had spent on land and on economic development would surely be easy booty for the Arabs, since it would be a simple matter to throw the Jews to the bottom of the Mediterranean Sea.

As the time for the British withdrawal grew nearer, the zeal of the Arab League was redoubled. Meetings and conferences took place almost daily and burning calls and appeals were issued. Brotherly advice was given to the Arabs of Palestine, urging them to leave their land, homes, and property and go to stay temporarily in neighboring, brotherly states, lest the guns of the invading Arab Armies mow them down.

The Palestinian Arabs had no choice but to obey the advice of the League and to believe what Azzam Pasha and other responsible men in the League told them—that their withdrawal from their lands and their country was only temporary and would end in a few days with the successful termination of the Arab punishment action against Israel.

But victory was not to be the result of this punishment action. Victory is not produced by speeches, reports, and declarations. Victory is produced by cannons, airplanes, and tanks. The threats of the Arab League evaporated in the face of the preparedness, good command, and superior generalship of the Zionist gangs. We saw the military promenade become a crushing catastrophe that shattered the prestige of the League and its member states and exposed their inner weakness and deterioration.

Azzam Pasha and the other responsible Arab leaders now try to excuse the defeat of the Arabs on the ground that their forces were inadequately armed, organized, and trained. In the light of this, we should like to ask Azzam Pasha and his colleagues a simple question: "If the Arab Armies lacked sufficient arms, organization, and training, why did you throw them into a savage war against an enemy who had everything that modern wars require—equipment, good training, unity of command, expert officers who knew the art of war and who had participated in two world wars? And why did you jeopardize the lives of a million Palestine Arabs and make them wander from their homes? Since, as you say, the Arab Armies were not adequately prepared for victory, did not the flight of the Arabs, urged by you amount to the facilitation of the Zionist victory?"

APPENDIX D

RESETTLEMENT OF ARAB REFUGEES

The following are excerpts from statements by United Nations representatives with regard to the resettlement of Arab refugees.

Mr. MOLINRY (Australia): "He * * * felt that while the return of the refugees to Palestine was desirable from every point of view, it was very possible that in many cases such a return would not be wholly in the interests of the refugees themselves. It might perhaps be better if the refugees were compensated for the losses they had suffered and were permitted to settle in neighboring Arab countries * * * he expressed his satisfaction at the statement by the Israeli representative that his government was prepared to admit liability to pay compensation as proposed." (UN document A/AC.88/SR.64—November 30, 1950).

Lord MacDonald (United Kingdom): "The United Kingdom had, however, given serious consideration to the Commission's statement that, having in mind the best interests of the refugees, attention should in future be given to the resettlement of nonreturning refugees in the Arab countries, with payment of compensation to them. It was doubtful whether it was in the interest of the refugees themselves to return en masse. It was questionable whether the refugees fully appreciated the conditions to which they would return and the implications of their return. Were they aware that they must be prepared to live as peaceful citizens of Israel, accepting all the obligations of citizenship? There was a grave danger that the legacy of mistrust and bitterness would

make the task of mutual adjustment of populations extremely difficult. Moreover, it was probable that the Arabs of Palestine would have great difficulty in adjusting to the very highly organized economic structure of Israel, which ran counter to the economic outlook of the Arabs. It was unlikely that an Arab would wholeheartedly accept the regime of austerity, directly toward the achievement of goals for which at the best he had no enthusiasm and which might well arouse his active resentment. In the circumstances, it was the considered view of the United Kingdom delegation that the Arab refugees would have a happier and more stable future if the bulk of them were resettled in the Arab countries. A corollary was that nonreturning refugees should as a matter of right receive early and adequate compensation for the property they had abandoned in Israel.

* * * The United Kingdom delegation had noted with interest the constructive suggestion of the representative of Israel that compensation should be paid into the reintegration fund. It hoped that any funds paid in compensation would be devoted to the reintegration of refugees, but felt that the precise procedure should be considered by the Committee of Experts." (A/AC.38/SR.61—November 29, 1950).

Mr. Ross (United States): " * * * The United States delegation hoped that all the members of the United Nations in general, and in particular the states of the Near East, who were very specially concerned with the welfare of the refugees, would approve the spirit of the report. * * * Mr. Ross hoped that all the near eastern governments concerned would give prompt and determined consideration to definite proposals for reintegration. * * * For the reasons stated earlier, the United States delegation considered that the United Nations in general and the states directly concerned in particular, should realize that direct assistance to refugees could not continue forever. Accordingly, a constructive program had to be adopted which would enable refugees to become an economic asset for the Near East countries" (A/AC.38/SR.35—November 7, 1950).

Mr. Ross (United States): " * * * His delegation had welcomed the statement of the Israel Government's intention to contribute to the reintegration fund established under the resolution" (A/AC.38/SR.62—November 29, 1950).

Mr. Naudy (France): " * * * The French delegation welcomed the position of Israel in the matter of compensation" (A/AC.38/SR.63—November 30, 1950).

Mr. Lapointe (Canada): " * * * His delegation hoped that refugees would be told that their future would perhaps be more promising if they agreed to permanent settlement in Arab countries" (A/AC.38/SR.35—November 7, 1950).

THE MUTUAL SECURITY PROGRAM

TUESDAY, JULY 31, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the House Foreign Affairs Committee room, the Capitol, at 10 a. m., Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

Ladies and gentlemen, we are privileged to have with us today a great soldier, Lt. Gen. Alfred M. Gruenther, Chief of Staff, Supreme Headquarters Allied Powers, Europe.

General Gruenther will be our last witness, I think. Anyway, that is the way it is planned, and it is planned that way because we wanted to have a witness here who was in a high position in the military field, and one who has already demonstrated to the committees of this Congress his thorough knowledge of the problems with which we are confronted.

STATEMENT OF LT. GEN. ALFRED M. GRUENTHER, CHIEF OF STAFF, SUPREME HEADQUARTERS, ALLIED POWERS, EUROPE

General GRUENTHER. If it is agreeable to you, Mr. Chairman, I shall not submit any prepared statement. Instead, I would like to discuss the problem we face in Europe today as we see it from our vantage point in Europe. If it is in accordance with the rules of your committee, I would welcome questions from you gentlemen here at any time.

I would like to give you first our views on some of the practical factors related to the accomplishment of our general mission in Europe.

As you know, General Eisenhower's headquarters recently moved to a new location about 10 miles outside of Paris. Some of you gentlemen were over there a month ago when we were still in the Astoria Hotel.

Mrs. BOLTON. Just where?

General GRUENTHER. Our new headquarters is just north of Versailles, at Rouencourt, Mrs. Bolton. The breezes are very fine there. So fine in fact that there is not a single fan in our new building. However, Paris weather selected the day we moved to have one of its rare hot spells. As some of you recall, while the congressional party was there, we had nothing but cold; but, as I said the day we moved in was really hot. We are trying to set an example of austerity, so it was well to have a little of our own medicine in respect to a lack of air-conditioning.

I am going to outline what the intelligence situation is, as we see it.
(Discussion off the record.)

Mr. VORYS. You have told us of the ground movements. There would be air activities that would go on, including the use of the A-bomb in your emergency plan, would there not?

General GRUENTHER. Yes. I have been discussing this from a ground viewpoint, and the situation with respect to the air is such that I am glad you interrupted me at this point so I can make it clear that in all of our planning air power is the dominant factor.

It is the skillful use of this air power that we envisage as being the extremely important factor in warfare.

(Discussion off the record.)

General GRUENTHER. There is in Europe a population of 175,000,000 and we have facing us a very backward enemy from the standpoint of culture, and so forth. Our belief is if we can get the 175,000,000 Europeans going, not to mention the productive capacity of the United States, there is practically nothing we cannot do.

So General Eisenhower considers his job largely one of building morale. He visualizes at this stage that the leadership of the United States furnishes that lift necessary to raise the morale of Europe. Having United States participation in the defense of Europe, particularly with ground troops and air troops stationed there, is a factor which he believes is going to assist tremendously in raising that morale. It is one of the reasons why he is there.

In our planning we are looking ahead to the time when we can have what we refer to as a forward strategy, a strategy which is going to hold as far as to the east as possible. That is what we are working on now.

The question is, What is it going to require? It is obvious it is going to require more in ground troops and more in air forces than we have now. That is where we come up with what we refer to as a requirements plan—what it will take to do the job.

We have worked out figures, which are tentative only—

Mr. VORYS. What is the yellow line?

General GRUENTHER. It is simply the boundary between the British zone and the American zone. There are three zones in Western Germany, a British zone, an American zone in the center—I should say American-French zone in the center—and a combination French-American zone in the south here.

You see here what the requirements are on this chart; we have also listed the development that has taken place in Europe.

(Discussion off the record.)

General GRUENTHER. We firmly believe if we get a posture of defense of anything like this order of magnitude, the war is never going to come because it is going to be so expensive for an enemy to undertake an aggressive act of that kind, regardless of the surprise advantage. Of course, he is always going to have the advantage of surprise and all he has to do is make up his mind some night to attack. Still, if we have our airfields located properly—these troops will be on the alert all the time—it is going to be a tough proposition for the enemy.

(Discussion off the record.)

Mr. REECE. Will you mind discussing the air power somewhat more in detail? You are about the only one who has referred to it

at all in our entire testimony here. So far, the discussion has been on a scanty basis at the best.

(Discussion off the record.)

General GRUENTHER. We are trying in every possible way to build up air power to be able to neutralize that threat. Because one of the first things that would happen would be the battle for air supremacy.

At this time, today, the 31st of July, it would not be a very even battle. As we build up that air power it is going to be tougher and tougher for them. That is a very important part of our program.

Throughout this whole area now there is planned the building up of air fields.

In an organization like NATO there are many difficulties. For example, who pays for the airfields? There is a French term—"infrastructure"—which many of you may have heard, which includes these installations. Infrastructure also includes, in addition to airports, signal communications, depots, and so forth.

One of the big political problems—it is not one our headquarters is seized with, but Ambassador Spofford, United States Deputy to the North Atlantic Council, is working on it urgently, is how the infrastructure—these fields, these depots, these signal communications, etc.—is going to be financed.

It represents a tricky problem. Just take one item alone, signal communications. If you are going to have cables, and you must have them, you have a problem. Here is where General Norstad's headquarters is at Fontainebleau, close to the place I am pointing. He must be able to get instructions out to his air organizations here; radio is one way, cable communication another.

Suppose we build these cable communications in time of peace. They are being used by the PTT, the commercial concern. Who should pay for those? PTT is not interested in having them in. They have enough communications right now. It is that type of complicated problem that comes up. We are not in a position to solve that. Our job is to say, "We need this many fields. We need this kind of communications. We need this many depots." It is up to the government, the North Atlantic Treaty Council, to decide how they are to be handled.

Mr. CHIPPERFIELD. How are you coming along now, since the elections, with the air bases?

General GRUENTHER. As far as the French are concerned, Mr. Chipperfield, their attitude has shown some change. When you were there, Mr. Chipperfield, and you other gentlemen were there, the French were rather sensitive on the question of sovereignty because the Communists kept talking all the time of the American invasion and referring to the fields and adding fuel to that fire.

That has dispersed now. The French do not pay too much attention to the Communists on that score now.

But the question who pays for them is still a problem that is bothering the French Government. The French Government in its budget this year has 2,600 billion francs. The Government has thus far voted taxes for only 2,200 billion. So they have an immediate deficit of 400 billion, without considering anything like airfields. So they shy off a little bit on the financial question.

We keep pushing all the time and saying, "Gentlemen, these have to be built."

I raised this point only because of your question, Mr. Reece, to show that we are doing everything we can. Without the airfields we are not going to be able to use the air power.

If you could snap your finger and make these bases, we still would have other problems, such as making the planes and training the pilots. And training pilots requires a long time.

It is a problem to which General Norstad's headquarters, which is a subordinate headquarters of General Eisenhower's, is devoting its major time and effort.

Rest assured, we are thinking and concentrating and worrying all the time about the improvement in air power, because we feel that it is the major factor in preventing the war from starting. If it does start, however, it gives us a chance to fight it on a very favorable basis.

(Discussion off the record.)

General GRUENTHER. We recognize this: In trying to mastermind the Soviet philosophy there are many pitfalls. With 12 men in the Kremlin making the decisions, for anybody to stand up and say that he knows what they are going to do is, of course, a type of lunacy. We claim no ability to forecast that.

(Discussion off the record.)

General GRUENTHER. But there is nothing to do about it except get ready and to be able to cut down this great disparity in strength.

Mr. VOYA. General, there is one thing you have not mentioned. I wish you would say something about it. As I understand it, on ground fighting or any other fighting the offense has to have at the point of contact a tremendous overbalance of forces. Am I wrong about that?

General GRUENTHER. I think that is a very good point, and a very good additional answer to the point Mr. Chipersfield brought up.

There is one other point which is appropriate in that same connection. That is, the Soviet division is smaller than most of the divisions that are going to be facing them. The Soviet division runs about 12,000, generally speaking. The Allied divisions run from 15 to 18 thousand. Our American division, you know, is a little over 18,000. The British is about the same.

Mr. CHIPERSFIELD. Would carrier-based aircraft from the Navy be helpful?

General GRUENTHER. Yes. General Eisenhower's philosophy is that he will get a great deal of help out of naval-based carrier aircraft.

Mr. MERKOW. General, is there not considerable danger in this because the Soviets also know that the longer this goes on the less advantage they will have? In other words, we are going to be better prepared, and if they are going to strike they had better do it in the near future, it seems to me.

General GRUENTHER. That presents quite a dilemma for the Soviet high command. If the Soviet command were convinced we were going to attack, that is probably true. I believe, and I have had a fair amount of contact with these doctrinaire Communists, they feel pretty strongly that time is still on their side.

First, it is not on their side as it stands right now. They have committed a very gross error. In history, I think the fight in Korea is going down as one of their major errors, because it has started a chain of events which before it is finished, will have brought about the greatest aggregation of power against them the world has ever seen.

There are some possible pitfalls between now and the time when we will arrive at that condition. If the allies fall out, and a coalition of this type is certainly a very delicate business to handle, and if the rearmament in the western countries brings about economic distress, the Soviets will have had a considerable degree of comfort.

(Discussion off the record.)

General GRUENTHER. Take, for instance, a Communist official I knew in Vienna. His belief in the excellence of the Soviet system, and particularly the Soviet economic system, was such that there is no question but what he believes firmly in communism and in the eventual deterioration of capitalism. The world could not continue, as far as he is concerned, with that, any more than with mercantilism, slave ownership, and feudalism. They have all gone into the limbo of obsolescence according to him. And as far as he is concerned, capitalism is going the same way and it is just a question of time. He had no particular animosity toward the United States, except that the United States has an awful system. As time went on, he felt the United States would recognize the validity of the Soviet system. A man like that in power has to take some very big chances to start a war now. He is an extremely high-ranking man, a colonel general, who is right next to an army general, and then comes the marshals of the Soviet Union.

Whether his associates believe the same thing or not, the responsibility of unleashing a war for which they cannot logically foresee a successful conclusion gives them a great deal to think about.

However, you can get into a long argument as to whether time is on our side, or whether time is on the side of the Soviet Union.

My own conviction, and I am absolutely positive of it in my own mind, is that time is on our side if we can make the proper use of it. If we go down and are not able to continue with the degree of resoluteness that is required, and cannot see through a coalition of this type, and I can assure you that the frustrations are many in connection with it, then the Soviets may be right.

I think they have a difficult problem in trying to resolve this perplexing dilemma which faces them now.

Mr. JUDD. General Marshall, on the other side of the Capitol, said that for 6 divisions or about 108,000 combat forces, we had to have 232,000 men in supporting units, artillery, antiaircraft, and all the other things.

When you are talking about the total armed forces in Europe is that in the sense that General Marshall was talking about?

General GRUENTHER. I am talking, Dr. Judd, in divisions. I am not sure what General Marshall was talking about. So I will not answer that I am talking about in the sense that General Marshall was talking about. We are talking about divisions that are properly supported.

Generally speaking, this is a general rule that the American Army has been following. European armies do not follow that completely. On account of our base of supplies, and of course we will supply our own American troops, we will have a long supply line.

Considering the fact that there will be a great deal of air power over there to protect with antiaircraft and so forth, it is estimated it will run on an average of between 40,000 and 45,000 men for a division.

It means, therefore, if you have a division of 18,000 men, there is something over 22,000 men in support of a division. There is no fixed rule on that, because certainly there is no relationship between the amount of antiaircraft that you need to protect a major port and the divisions that are up ahead on the line. That is about an average.

Now then, your question, are the European divisions based on that kind of calculation; in other words, are we going to base X times 40 for those supporting. That is one of the problems we have to face.

(Discussion off the record.)

General GRUENTHER. We do not think in the case of the Dutch for instance that it is necessary to have the same number of auxiliary troops as we have for a United States division. However, it is going to be some figure, Dr. Judd, in addition to the division.

The Soviets, since you have brought the question up, probably operate on a more austere system than do the Western Powers.

(Discussion off the record.)

General GRUENTHER. The Soviets have a smaller slice tied to their lower standard of living. They take less care of their troops, they recruit and take on local civilian labor without any reference to the situation; the gun is the persuasive power they use.

Mr. VORRA. General, before you get to that, a British officer told me that they thought one reason why the Soviets did not move was that they did not have an administrative set-up for all Western Europe. Is that a factor at all?

General GRUENTHER. I suppose it would be a factor and they certainly would have their pains if they moved in and did not have an administrative set-up. However, in the last war they seemed to survive that lack pretty well. They, as you know, were thrust back, and I think we have to realize this. If you realize what happened to the Soviets from June 1941 until December 1941 you would see that the Soviets lost 5 million men in killed, captured, and wounded. They were people they had no control over. They were gone—finis. That is not to mention untold quantities of ammunition, equipment, and so forth, and not to mention all of this administrative personnel.

Still, they held the lines at Moscow, and within a matter of months started an advance which carried them right on through to Berlin.

Now, they did not have an elaborate organization. They did it by ruthlessness and disregard for human life. They have a very definite theory that the individual exists for the benefit of the state. A friend of mine will argue for hours on the thesis of the dignity of man versus the dignity of state. That is their whole philosophy.

So as to the administrative part of being able to control hostile populations, they have a system that is rather convincing in a way. It did not bother them too much, because if they got any sniping, and they did get plenty, they just exterminated whole groups of people.

So I would say while that is probably a factor as to why they do not go to war now, it is probably not the deciding one.

You recall in 1946 Stalin made this pronouncement to his people. He said:

In order for the Soviet Union to be protected from all possible accidents we should have a steel production of 60,000,000 tons a year; an oil production of 60,000,000 tons a year; and a coal production of 500,000,000 tons a year.

Whether he was giving a blueprint or not it is difficult to say, but what are the facts? What do they have now? They have a steel

production of less than half of that, or about 28,000,000 tons a year; they have an oil production of a little over half, somewhere about 40,000,000 tons; and a coal production of a little bit over half, or about 265,000,000 tons.

So, in trying to reason out why they are not attacking, I think more than this administrative set-up that you are talking about. You would find it in the field of industrial potential and ability to fight a long war and ability to take care of the colossus, namely, the United States, which is a very significant factor that they cannot overlook.

From our standpoint what we are doing to this military aid program adds up as follows: The programs which have been passed by the Congress up to date will provide for the major items of equipment for a certain number of divisions. The program which is proposed before your committee now and before the Congress would complete these divisions and provide the major items of equipment for almost an equal number of additional divisions.

Then, it would provide partial equipment for several more divisions.

If you look at what we are shooting toward, we are really aiming toward having available enough equipped divisions to stop a major attack. The countries have the manpower, although they do not necessarily have the money to pay for all of this now. They will have the manpower and structure by the end of this year, for about 50 percent of what they need, of which at least half and maybe even more, are very grossly underequipped now.

So, recognizing this threat that faces us, we are very eager to see this program proceed as rapidly as possible. In fact, if the economy could stand it and the production could stand it we would prefer to see it for a larger number than this.

When the suggestion is made it would be well to spread it over a period of time our philosophy is that we think it is extremely dangerous and extremely inadvisable to spread it over a longer period of time than it is spread over now.

General Eisenhower's basic philosophy is this: The problem is such an urgent one in terms of United States security and the question of being able to narrow this gap in the disparity of power between the east and the west is such a very, very important one from the standpoint of raising morale, that the United States should be filled with impatience to get the job over, so that we are not committed to this thing forever and so that we are able to bring these people up to a degree where they can defend themselves. His thesis is that over the long term Europe must be able to defend itself; that this is a matter of heart and brains, and that you cannot import these qualities. Because these people have been overrun and because of the vicissitudes of economic dislocation they have had terrific psychological setbacks that you know so well. He feels that we in the United States must exercise our leadership at this very, very important time, and that, without regard to any particular fixed amount, we should get them equipped as rapidly as they can take it on.

His very strong belief, therefore, is that if this is a considered program from the standpoint of production, which is a point that other witnesses have undoubtedly testified on, that it should go forward and should not be prolonged. If anything, if there is any way to expedite it, it should be expedited.

Mr. HERTER. May I ask there, are you referring specifically to the suggestion made in the Senate that this be spread over a 2-year period?

General GRUENTHER. For any period. I am referring to this, Mr. Herter: Of course, we are not able to keep in touch with all that is going on here, but we hear, from time to time, suggestions that it be spread over a longer period, or that a certain number of billions of dollars be cut off. Of course, as to that longer period, if you do it over a 2-year period it has the effect really of reducing divisions and air squadrons by a very significant number, say, between 12 and 15 in the case of divisions. That is a reduction we can ill afford at this time.

The general feels that the European countries have had a considerable increase in morale in the last year, and that the curve is very definitely upward. A terrific amount still remains to be done. There is a question as to how some of it is going to be done, because considering the small reserve that they have—and I am sure other witnesses have testified to that—there are many great problems still to be resolved.

However, his belief is that it is our job, and not simply because of any debt to civilization, but because of enlightened self-interest. He stated repeatedly and has told you gentlemen who were over there that he is viewing this as a matter of the security of the United States, and it is not a question of any philanthropic process of defending somebody else. It is from the standpoint of sheer enlightened self-interest, and that it is to our very great interest to speed this up as much as possible.

(Discussion off the record.)

Mr. VORYS. On this spreading it over business, not only is it going to be spread over in that there is today a shockingly small amount of what we have already appropriated for that is already there for you, but the program of deliveries will spread it out to beat the band. I am just looking here at Mr. Lovett's public statement before the Appropriations Committee, and he said:

The lead time on our major required items is fairly stable. It takes 18 months in order to deliver.

So that this is going to be spread over an awfully long time even the way it is going up to date.

General GRUENTHER. It is our understanding, Mr. Vorys—and I am only repeating what we have been told on this—that this program that is under consideration now will be substantially delivered in a relatively short time. Whether that will cover all of the long lead-time-items I do not know, but in our checking into it and in our pushing for it that is what we have been told. It is our understanding that the 1950 program is now over 50 to 60 percent delivered; that delivery of the 1951 program will be completed by next July, that is, a year from now; and that this program under consideration now would be substantially completed not too long thereafter.

I will not say that those figures are correct, but that is what we have been told and that is what we have been pushing for.

We believe in a year or a year and a half we would have a very significant hurdle for the Soviets to overcome. It does not win the war if the war comes. It may not even prevent it at that time, but it is going to cause them to think twice, or maybe three times, before they start it, especially if we can get air power in there.

Chairman RICHARDS. Mr. Chipperfield.

Mr. CHIPPERFIELD. General, last week in the papers there was a statement about one army, one uniform, and one flag. What was meant by that statement, and who made it?

General GRUENTHER. I do not know who made it, but what is undoubtedly referred to is the European army.

Mr. CHIPPERFIELD. Would we be included in that?

General GRUENTHER. No, sir. The name we have suggested for it is the European defense forces, because again there is psychology in it. People understand a division, and there is a tendency always to refer to power in terms of divisions. It is a standard that many understand popularly. They have called it the European army concept. We believe it should be called the European defense forces.

The idea is, Mr. Chipperfield, is this: This problem of closing this gap or of getting these forces we have shown here—and this does not get them by any means—brings in the question of the Germans and how do you get the Germans into this sort of thing?

It has been estimated—and the Germans and the French have done this—that if they will have an allegiance to a union instead of a national allegiance, that this fear and this antipathy between these two countries, France and Germany, would be alleviated, so that you can use this German manpower. That is why these conferences have been taking place.

General Eisenhower supports the idea of this and while our headquarters has not been in this all along, we are going to be in it from now on.

However, with respect to the question you are talking about of one flag and one uniform, it is a European idea, and this is for the use of European forces. So, if this situation developed—and it is going to require some great leadership and imagination to develop it because there are many complications in it—you might have United States forces and maybe British forces and European forces. The European forces might all be in one uniform.

Certainly the symbol of having them in one uniform under one flag is very fine. General Eisenhower firmly believes that many of the problems of the integration of Europe and raising the morale of Europe and perfecting the defense of Europe would disappear if customs and boundaries disappeared.

The European defense forces are in furtherance of this concept.

Mr. CHIPPERFIELD. We would be fighting under no flag but our own?

General GRUENTHER. That is right.

Mr. JUD. We hammered away at the necessity for unity of the European forces in this room 2 years ago. Finally we wrote into the legislation and the committee report language to deal with it, because one of the greatest handicaps to getting across the whole military-aid program was the problem of divided forces under separate commands.

We said, or some of us did at that time, that there was no sense in starting on this at all unless we were reasonably sure that if war broke out there would not be half a dozen different armies going in different directions under separate commands. Instead there must be a unified command. Judge Kee himself came up with some phrase like "unification of direction" as one of the requirements that the committee was insisting on from the start of the program.

So it is not General Eisenhower's idea just now. It was insisted upon here more than anywhere else.

General GRUENTHER. Of course, you understand General Eisenhower does not make any claim to credit for any of the idea.

Mr. Judd. Or blame.

General GRUENTHER. Or blame either. He has recently been asked whether he would support it, and he has said he will support it.

Mrs. Bolton. That does not mean, however, that General Eisenhower said all troops are going to be under one flag, as has been publicized on this side of the water.

General GRUENTHER. I am not familiar with that quotation. He has not said that. As a matter of fact, General Eisenhower, on the question of uniforms, believes it is a technical point. They have had some committees of French, Germans, Belgians, and Italians conferring for the last 6 months. I happen to know what is in that report about uniforms, but I am sure General Eisenhower does not even know what they are saying about uniforms because we have never discussed it.

As to the question of United States troops—if that is the import of the question you asked—it has never even been mentioned.

What General Eisenhower does feel—and the Schuman plan is an illustration of this—is this: He feels that the more the United States can back a project of this sort from the standpoint of helping to resolve very complicated problems, the more sure it is to go over. The Schuman plan had no chance of adoption unless the United States supported it.

Mrs. Bolton. That is part of the United Europe idea, is it not?

General GRUENTHER. Of course. That is the United Europe idea, which he is for, but he is not the only man who is for it.

Mr. Reece. If the general is not advised, in fairness to him, I think it might be said that one of the Senators quoted General Eisenhower, after the return of the senatorial party, as stating that he was in favor of one army, one flag, and one uniform. I do not know in what words he was quoted, but that was the substance of his statement.

General GRUENTHER. If he said that, Mr. Reece, he was thinking of it in terms of the Europeans, because that would be in character with his belief for the Europeans. The more the Europeans can get united, the better.

Mrs. Bolton. And anything else would be out of character with the man.

General GRUENTHER. Oh, yes. He would never say that. I am sure it is just a misunderstanding. I have not seen the quotation.

Mr. Fulton. May I ask if this could not be done? The people who have been up here to brief us on this program have had one figure in mind, and that has been the \$8,500,000,000 figure. As these alternatives are shaping up I believe rather than just casually answering them that it would be well for the services to provide a program on each one to show the variations and to show what the defects are from the one that is the best program.

For example, there is going to be a billion-dollar cut put in. There is in addition going to be one of \$2,500,000,000 or \$3,000,000,000. So that would be other alternatives.

The other plan is the Taft-Smith plan of extending the program over 2 years and, in the alternative of that, a 50-percent cut for the year in funds.

One would be to extend the program over 2 years and let you do your own ordering and talking care of your own lead time.

I think on about four of those major issues which are now in the public mind that it would be well to have you people meet them specifically. I have asked that that be done because otherwise we hear indirectly of what somebody said to Senator Lodge, or maybe we hear casually that it will cost us divisions or cost us air wings, but it has to be gotten up just as the \$8,500,000,000 figure is gotten up, showing what it really does to our programming or commitments on your lead time and on your heavy equipment; what troops would be ready in Europe that you would not have the equipment for, and so forth. I think if it could be done that way it would get us off this hook, where we in the committee are briefed thoroughly on one program of \$8,500,000,000, but when we get off that as military alternatives, we just founder.

General GRUENTHER. In answer to that, Mr. Chairman, I am sure that the Defense Department here would attempt to get you any programs that are required. Since you are referring to us, of course, we do not prepare the programs over there. We are an international headquarters, Mr. Fulton, and General Eisenhower is in command of this force.

We have gotten up the military requirements. We have not converted them into money, nor are we aware of the various alternatives. I am sure, though, there is talent available in this city that could work those up.

Mr. FULTON. General Eisenhower, however, answered this 2-year-spread theory.

General GRUENTHER. Yes. We could answer the 2-year-spread theory pretty well, and we would have comments on any one. Let us say you mentioned one, that there would be a cut of a billion dollars.

Mr. FULTON. That is the Douglas amendment.

General GRUENTHER. Yes. If the cut of a billion dollars came out of the military side then we would be able to indicate what the effect would be on the program. If you had a spread over 2 years we certainly are able to make a reference to that.

Mr. FULTON. Then there was one that had to be denied in our committee hearings, that our committee members were supposed to be for, and I do not think that was the case. That was a \$3 billion cut. That has been variously estimated at a \$3 billion cut and a \$2.5 billion cut. These cuts that have been mentioned so far have been indicated as across-the-board proportionate cuts.

General GRUENTHER. Yes. Of course, you get into this kind of a question. If a cut comes you will have to reevaluate the whole program, because if you start off on one assumption where you might have started, let us say, to equip partially 10 divisions, then you might say it is not advisable to equip those 10 divisions because they would be virtually broomstick divisions. I do not say that would be the case because I do not know what the effect of a billion dollars would be on it. I do not have those figures, but there are people in Washington who are doing that pretty well all the time, and who have that type of information.

So, if the committee desires it, Mr. Chairman, I think you can get that information. I am not able to help you actually. I cannot answer that question.

Mr. HERTER. Can I ask you a converse question to the one he asked? We have so much coming off our production lines at the present time and so much is projected for the next few years with the money that is being made available, or that is made available. In connection with some of these end items, such as tanks, planes, and so on, if our military people in this country decided that they could spare more for you in dollar equivalent than there is in these appropriations today, from what is coming off our production lines, would you have the manpower available to take advantage of that at the other end?

In other words, if you were given flexibility on the top side, could you take advantage of that?

General GRUENTHER. Yes, sir; if we knew it far enough ahead of time. What we have to do, of course, is involved in the question of calling up additional divisions and making a program. We have to be able to present that to the governments in advance.

Mr. HERTER. What is your lead time, then, as against the 18-month lead time?

General GRUENTHER. It depends on budgetary programs and fiscal years, which run differently for different countries. For example, for the French, if we were going to try to push the French into an expedited program we should be getting it in to them pretty soon. They practically close their budget come September for consideration by the Assembly shortly after the first of the year.

Of course, their budgetary period is in a turmoil right at the moment because they do not have a government. Whether they will be able to meet that schedule or not I do not know. So I cannot give a categorical answer on the lead time, but if there is a lead time we have to meet it.

Mr. HERTER. You can speed up your operation, though?

General GRUENTHER. Yes, sir.

Mr. HERTER. The reason I asked that is this: You have enough experience in the Pentagon to know many times the programing is changed from the point of view of priorities.

General GRUENTHER. Yes.

Mr. HERTER. A cease fire in Korea might change it considerably, for example. There might be changes in appropriations heretofore made, and considerably more might be released from this side to help you with your problem in the domestic situation and in Indochina, or wherever it might be.

I think it is important to know if more could be released to you from the point of view of firming up your whole position, if you could take advantage of it?

General GRUENTHER. Yes. My general impression is we could. As a matter of principle, Mr. Herter, we believe it would be to the United States interests to be able to do that, because it is surprising how much moral effect equipping a division has.

Take Italy, for instance. I do not know whether you went down there, Mr. Herter, or not, but you got a very fine impression, those of you who went down there, from the Italians.

Just a week ago today General Marras came into my office.

(Discussion off the record.)

General GRUENTHER. He had some questions on priorities of equipment for Italy.

Of course, why the priorities went the way they did I did not have a chance to check up on, but just to have been able to take on an increased delivery in terms of certain equipment for those Italian troops would have helped out a great deal.

General Eisenhower went into an infantry outfit here and he found three different types of machine guns in that one place. They were not kicking about it. They were quite willing to have them and utilize them, but they should have all one type.

Mr. HERTER. One more question along that line. Again, from your experience in the Pentagon Building—

General GRUENTHER. I should not think you would keep on reminding me of that.

Mr. HERTER. Assuming that the Department of Defense has so much available in the way of equipment for all purposes, it then sets up its line of priorities as to where that must go. If it had a free hand to equip you within the limits of what it felt was prudent, from its total production, it could give you advance notice as to what it thought it could let you have. Would that not be a much better measure of what you were trying to do than a pure dollar measure that you are held down to year by year?

General GRUENTHER. Yes. As far as we are concerned, the dollar does not mean very much to us. I do not want to say we are disregarding the dollar, but I mean we cannot convert from dollars into items.

Mr. HERTER. Those things you are interested in.

General GRUENTHER. Yes; those things we are interested in.

Mr. HERTER. But again, if you put on a different hat and were sitting in the Pentagon Building today, you would not release a single thing, no matter how many dollars were appropriated, if you thought they were needed for our own defense here in the United States, or for priority overseas?

General GRUENTHER. Yes. I am not so sure about the last one. If understood the question it was this: If I were sitting in the Pentagon with another hat on I would not release a thing.

Mr. HERTER. Unless it were in our national defense interests to do it.

General GRUENTHER. Yes. I would agree with that.

Mr. HERTER. In other words, you would establish there priorities which were in our own national defense interests in sending equipment abroad?

General GRUENTHER. Yes. But as a matter of policy if I were sitting where that hat is, as you know, I would have as a liberal policy the question of determining what is best for the purpose you mentioned, of our own national interests.

Mr. HERTER. Our own national interests?

General GRUENTHER. Yes. Because I am firmly of the opinion—and having been over there I am convinced it is the right thing that the surest way to get these people so that they can defend themselves is to put them on their feet, and the faster we can do that, the better it is for our own interests.

Mr. HERTER. For our own defense interests?

General GRUENTHER. Yes, sir.

(Discussion off the record.)

Chairman RICHARDS. General, you mentioned a thing that worried me a long time ago. You mentioned the fact of this Italian general

coming and seeing that another army had so-and-so, and you mentioned that you do not know why that was. Why should not General Eisenhower have the final say-so on that?

General GRUENTHER. He would, sir. This was something that was started long before we got over there. We are into that fairly well now. On a thing like that we will have quite a bit to say, as a matter of policy.

I should explain just a little bit on that. From the standpoint of staffing, we are trying to run his headquarters on an extremely austere basis. We have, as of the day I left, 230 officers in the headquarters. That is for everything. To monitor this type of operation you are talking about would take a large number of officers. Actually, we have five. They can only handle policy matters, and when they get a complaint like this, they can only pass it on to somebody else to get an answer on it. That is the way we do it.

We are seeing, though, where these difficulties come up, that before any decision is taken, they are referred to our headquarters, that is, the American side of our headquarters, which is just five officers.

Chairman RICHARDS. That is just consultative, is it not?

General GRUENTHER. Yes, sir. There is no question about their going around us. They will ask for just as much advice as we are able to give. Our liaison with General Kibler, who is working for the United States Chiefs of Staff in London on this very problem, is such that he always refers that kind of subject to us.

Chairman RICHARDS. Suppose the Belgian group was not doing what they should?

(Discussion off the record.)

Chairman RICHARDS. Can General Eisenhower say, "You have to do this, or you do not get so-and-so"?

General GRUENTHER. That is right.

(Discussion off the record.)

Chairman RICHARDS. And you cannot operate as things are now to make decisions like that?

General GRUENTHER. Oh, yes, sir. General Eisenhower's recommendation in a matter like that is a pretty firm matter.

Mr. FULTON. Why is he so far down on the personnel chart in this NATO business? That has worried us on the committee here. I agree with the inference of the chairman that it takes him down almost out of the policy-making group.

General GRUENTHER. Of course, that is true. This is a little complicated. He is down here. There is no question about it. He was put there to command the troops in Europe. There was at least one very distinguished American who came and advocated this: He said, "It is foolishness to have Eisenhower here. He should be up here as the executive chairman for this group."

Mr. FULTON. The quarterback.

General GRUENTHER. That was his thesis. Of course, that is inverting the pyramid quite a bit too. However, this gentleman believes that very strongly. In fact, I am inclined to believe he appeared before your committee. If not, he appeared before the Senate committee. That is one way of doing it.

Now, that is actually what happened. Even though he is on this chart down here, in practice you will find that these people are con-

ferring with him all the time. They do not know where he is on the chart and do not care particularly.

Mr. FULTON. May I comment on your chart? Theoretically, on a military basis he would have first to correlate and check with three other opposite numbers there, so that the four of them would then go through three steps to get up to where the final decision is made. They would then have to correlate on each side issue as they went, first correlating on the second level, and in four places on the third level, before they got to the Council.

General GRUENTHER. Of course, you are talking about correlating here. Was that the first correlation?

Mr. VORYS. Will the gentleman yield?

Mr. FULTON. Yes.

Mr. VORYS. You mean three steps sideways and four steps up.

Mr. FULTON. That is correct.

General GRUENTHER. Of course, you understand in this business, if this were a cominform, the Soviets would have a little different chart than you do have there in a democracy. When this thing is working, you have the question of persuading and leading rather than merely ordering and telling.

Mr. FULTON. General, might I just comment on what Mr. Vorys said? On the first step up, John, he has two correlations to make sideways, and on the second step up he has three correlations to make sideways.

Mr. REECE. Will the gentleman yield?

Mr. FULTON. Yes.

Mr. REECE. But under the chart of command here in the United States the commanding general would be down at least three steps.

General GRUENTHER. Yes, and there is a little question involved here, and a little principle involved which you gentlemen would be the first to warn about. You are not going to have the military run this country, and the military do not want to do it. So I do not know, and I am not so sure what Mr. Fulton's suggestion is, but I recall that this man whom I mentioned would have him up there, and the ministers would be coming around and bowing to him and asking for permission to speak.

Mr. FULTON. I compliment you in a way. I think the people of the United States want you and General Eisenhower to be pretty much running the show over there, and in where the major decisions are made, and they want you to be initiating and implementing it. We have confidence in you and we are lucky to have you there, and we do not want you clear down here and outside of it like this.

Mr. HOLIFIELD. The very fact that you are placed where you are, as far as the chart is concerned, is that not of a great psychological advantage as far as the people of Europe are concerned, that is, putting yourself in a position where you are not dominating the show ostensibly, even though you may be from an advisory standpoint?

General GRUENTHER. I think that is a very important point, Mr. Holifield. As many of you know, the question of United States domination is really a fairly sensitive point in many parts of Europe. One thing that has disturbed me is that United States motives have been so generally misunderstood. There are any number of people who are still very mistrustful of our motives from the standpoint of peace.

General Eisenhower has been hammering that he is for peace, peace. He is getting this point across, I would say, remarkably well. They trust him. They say, "Yes, he probably is." However, there are still a great many of them wondering about whether the United States is really for peace or not. A lot of them say, "Well, he is for peace. Yes, he is. But the United States is not."

That comes in very much on this point.

The good effect that he is having on the so-called common man of Europe is really very, very significant.

Mr. HOLIFIELD. In the last analysis, that is where the whole strength of the NATO movement will be. It will be on the convictions and morale of the ordinary man.

General GRUENTHER. That, I think, is very well stated.

Mr. HOLIFIELD. And we might hurt that morale quite a bit if we put ourselves ostensibly at the top and say, "Now, you boys do this," rather than saying, "Come on and let's do this."

Mr. FULTON. Will the gentleman yield?

Mr. HOLIFIELD. Yes.

Mr. FULTON. I am certain you are not trying to justify the crazy patchwork quilt of the NATO organization and the Council of Europe organization—

Mr. HOLIFIELD. No.

Mr. FULTON. And the organizations which act as a liaison between all of these countries and us and then between each of them. It is terrific if you try to diagram the thing up.

Mr. HOLIFIELD. Sometimes the diagram of a thing does not represent the real situation. I have found that out too. I am not justifying this diagram, but I am thinking through to the point we are trying to accomplish, and that is the encouragement of these people to go in with us on a mutual effort, an effort which we cannot direct them to go into, but which we must obtain their voluntary enthusiastic support.

Mr. JUDD. To show how little the people understand this diagram, when we were in Europe one of us asked the top brass, and the top civilian, what this army is generally called by the people. We asked, "Is it called the European army, or the army of Europe, or the NATO army?" They said, "It is called General Eisenhower's army." That is how the ordinary people in Europe think of it.

Mr. HOLIFIELD. Apparently he is at the top then?

Mr. JUDD. In the public psychology that certainly is the case.

General GRUENTHER. He has had a tremendous impact on them, and he has been very modest about it. He has created an atmosphere of cooperation. In our headquarters that has been one of the things we are after, to get these people who are working in the headquarters to feel that deep sense of conviction.

Mr. REECE. If I may revert to the chart with the red arrows, you expressed concern about getting the red arrows faded out?

General GRUENTHER. Yes, sir. We would like to have them a little bit shorter, at least, Mr. Reece.

Mr. REECE. Can they be materially faded until we get an effective air set-up which will give you an umbrella in Europe?

General GRUENTHER. No. I think that is correct, and that is certainly the thing we are emphasizing.

Mr. REECE. The thing that gives me some concern, following that up again, is that nearly all of the talk and discussion is about divisions, and relatively little about air power, which is essential.

You referred to the plan in certain areas. Can that be effective until we get a reasonable air supremacy?

General GRUENTHER. They can make a great contribution, Mr. Reece, but they are not going to be the whole thing.

I do not want to go into any platitudes that it is teamwork that counts and that you have to have the three components working together, but it is really a fact.

Mr. REECE. We all accept that. Everybody accepts that, but there has been a wide feeling that air power has been de-emphasized.

General GRUENTHER. But we are as much concerned about the air power angle as you are, and perhaps even more. The question of trying to defend this with a wall of flesh is absolutely repugnant to us and we deplore just as much as you do that the unit of measurement is always talked about as the division, because it has a psychology which is wrong, as far as we are concerned.

Mr. REECE. I think if that idea, General, could be conveyed, I think it would be very reassuring to the public.

Off the record.

(Discussion off the record.)

Mr. REECE. The one thing that is probably retarding them, or one of the things retarding them, is possibly that they do not have an adequate stockpile of aviation gasoline and the background support to support a sustained air attack.

General GRUENTHER. Possibly. I think from the standpoint of maintenance they do not have it covered nearly as well as our Air Force does, or as the British do. But they are getting better, and they are getting very much better, Mr. Reece. This MIG-15, and the way they have been handling that, and the way it has been built, has really been a revelation, and almost a shocking one. Of course, their pilots are still not as good as ours, but they are getting more experience and showing up better all the time.

In the maintenance field we think we still have an edge on them. That edge does not exist all the way through.

(Discussion off the record.)

Mr. REECE. Off the record.

(Discussion off the record.)

Mr. VOYTS. General, there is going to be offered an amendment governing the use of American ground forces in Europe. Maybe this happened while you were away, but the limitation which passed the Senate was six divisions. We found in the past 48 hours that divisions do not mean anything when you talk about limitations.

Granting that you might not wish any limitation, would a limitation by divisions, or by numbers, or by percentage, we will say, of total NATO ground forces, in Europe be the best for you and the most encouragement to Europe? That is, it seems to me there could be three kinds of limitations:

First, none of these funds should be spent to support in excess of six divisions in Europe.

Second, that none of these funds shall be spent for over 200,000 men, or 300,000 men in Europe.

Third, none of these funds should be spent for ground forces in excess of 10 percent of the ground forces in Europe.

It would be that sort of thing.

General GRUENTHER. Mr. Vorys, my suggestion on that would be, if the Congress decides that there is to be a limitation, that there should be a clear understanding as to what is meant by a division. If a decision is made that not over X divisions are going to go, that it is realized that the X divisions have to have supporting troops, so that misunderstanding cannot be created.

If there is to be a limitation at all, my recommendation would be that the limitation should be in terms of divisions, with the understanding as to what a division encompasses.

I would say just from reading the newspapers the last couple of days there might have been some misunderstanding about that.

With respect to one field that you opened, where you said that you realized I might feel no limitation should be on at all, on that particular point I happen to know General Eisenhower's view. His view is that there should be no limitation on the troops, as such. The limitation he is thinking about, if there was any, is the limitation in terms of time. During the time we are trying to raise the morale and build these people up, the question of limitation of divisions is a false standard. That happens to be what he believes. I recognize there is a difference of opinion on that.

Mr. VORYS. I have felt that the limitation of divisions was a false standard in that a division did not mean anything, and the last few days have tended to bear out my view.

This is a very practical problem that the Congress will face, I feel quite confident, in the next few weeks. If the troops are in being, there is a twilight zone there as to whether Congress can say what shall happen to them, but they can limit what dollars should be spent for them.

The proposal is unquestionably going to be made that, because of the entirely different conception of NATO that you hear about now compared to what we heard about it in 1949, Congress will want to retain some sort of control over a further change in the concept.

There are two ways to do it. One way would be to say we are "agin" it and you cannot say anything that is good. The other one would be to say this thing is coming along, and whatever we think of it, it is going to be done, and we want the formula in a form that is to be as good as possible.

When you talk about the number of divisions in Europe next year, are you including American divisions, or is that just European divisions?

General GRUENTHER. No. To explain this so that you have this clear, this is a requirement to meet this problem of what to do about a threat that is here. So, we say we need divisions. I plead guilty to the use of the term "divisions" but it means air power to support it.

However, we do not care as far as we are concerned what country supplies that division. We recognize there are, of course, certain realities of life which indicate that, but when we have listed this we have not said what countries these are going to be from. That is going to be for the governments to decide what proportion of those are going to be country A, country B, country C, or country D.

For example, just take an illustration. Just assume we can get 20 divisions in being from one country. Then, if this figure is right, and you understand it is an assumed figure, that would leave the rest of the divisions to be furnished by somebody else. If that were

the case and there were 20 effective divisions from country A, the problem of getting the remaining effective divisions from Europe would not be a major problem.

Mr. VORYS. Here is the problem. These European countries may follow what happens in Congress too.

General GRUENTHER. They do, very closely.

Mr. VORYS. Let us say they knew a certain number of divisions were required to be in being next year and that we had committed ourselves to the fact that the defense of Europe was the defense of the United States, and they just said, "Boys, there are going to be just 15 divisions from over here, or 20. Now, the United States can furnish the rest or the thing is over." That would be a bad thing, it seems to me, to have happen.

General GRUENTHER. Yes, sir.

Mr. VORYS. On the other hand, if they knew what the requirements were but they knew that the United States was not going to furnish more than six divisions, it might be a good thing for them—I do not know whether it would be six divisions, or 200,000 men, or 400,000 men in the ground forces; but, at any rate, if they knew we are going to furnish billions of dollars' worth of stuff, and Navy and Air personnel, but there was going to be a limit on the ground forces the United States is going to furnish, then I would think that might be an encouragement to have them face the facts of life rather than a discouragement.

That is what I think, but I want to know what you think.

General GRUENTHER. Well, that is a way of looking at it. General Eisenhower considers the problem a little bit differently. He is advising them that they must build up, and is saying, "Gentlemen, American aid cannot last forever. Therefore, you have a time limit, in which to raise that amount."

Now, you are doing the same thing. You and he are both reaching the same objective, which is to make Europe dependent on itself for its own defense. General Eisenhower and you, I would say, from what you have said, do not believe that the defense of Europe on a long-term basis can be importable. It has to be done by the people of Europe with regard to the ground forces.

That is his thesis and your thesis. You have a different way of arriving at it than he does, though.

Mr. VORYS. But that is not at all expressed in the law at the present time. We thought it was, but it turns out that it is not.

When General Eisenhower or you say to these European statesmen and generals, "That is what we think," then they say, "Well, that is not the way it is at all. The appropriations are made and all the troops can be sent. You yourself and the others have said that this defense of Europe is the defense of the United States. Now, get them over here."

There is nothing in the law to carry out what your idea, and mine, and General Eisenhower's is.

General GRUENTHER. Well, I accept your judgment as to what is in the law because I do not know, but as to these people arriving at any such conclusion as that, which is the second part of your premise, I can assure you they do not do that, because General Eisenhower preaches all the time that they are going to have to do that. So, within the ministries of those governments there is no question of that. It is not a matter within my knowledge as to whether it is in the law.

Chairman RICHARDS. Is not General Eisenhower's thinking in line with these objectives that you have just stated, so far as the United States is concerned, to get them out of Europe and turn that responsibility over to European troops; but does he not feel in the meantime the accomplishment of that objective would be slowed up if there were not the forces brought into being for morale purposes and so forth, in the interim, and does he not think that in order to reach that objective there should not be a limitation in between?

General GRUENTHER. That is correct, sir.

Mr. JUDD. Mr. Chairman, for the purposes of the record, I looked up the language on unity of command that was in the original law. It says:

Any such assistance furnished under this title shall be subject to agreements . . . designed to assure that the assistance will be used to promote and integrate the defense of the North Atlantic area and . . . to realize unified direction and effort.

That was Judge Kee's phrase. It was to make official our belief that they had to achieve an integrated and unified army in Western Europe.

Chairman RICHARDS. That was not the judge's idea, but it was more or less a compromise of an idea you advanced which you thought could go still further in the political field.

Mr. JUDD. I had urged something like "unity of command." His phrase represented a middle ground.

In the supplemental report of the committee we said this:

This matter of unity of direction and effort involves a most delicate question of timing. No question engaged the committee in more searching thought than the question of the timetable for developing unity of command.

The committee is aware that unity of command prematurely imposed might prove to be only a mockery and a hindrance. On the other hand, the frustration of unity of command by nonmilitary considerations must not be suffered to occur.

Mr. MERROW. Do you think it would be possible to realize the objective that you have now set forth that Europe will be in a position to defend itself, without the integration of Western Germany economically and militarily into these plans?

General GRUENTHER. It is conceivably possible, but with the greatest of difficulty. I would say the participation of Germany comes very close to being a "must." I hedged a little bit because it is conceivable you could have situations existing in East and West Germany, getting a buffer state where that would not be necessary, but naturally in our thinking we are going on the hypothesis that the inclusion of Germany obviously is a "must." We think it is very essential.

Chairman RICHARDS. In connection with that, Mr. Merrow, of course the participation of Germany is a political question now. But in the meantime, have you any contact with military men in Germany officially representing the Government, or otherwise?

General GRUENTHER. No. We have not officially or unofficially at this time, Mr. Richards.

(Discussion off the record.)

Chairman RICHARDS. But it involves the pride of the German people, though, and you have to deal with that.

General GRUENTHER. That is right, but on the contrary, having the size of the unit small did not involve the pride of the French people. It involved a fear.

In my particular view, in this period of austerity you can only afford one big fear at a time, and the fear of the evil of Russia is the big one.

(Discussion off the record.)

Mr. SMITH. Do you think the military is almost entirely at the mercy of the political decisions that are being made in Europe?

General GRUENTHER. No. Not at the mercy of the political decisions. I would say this: Except in England the military are not consulted as much as they are in this country. The military, generally speaking, are not on as high a plane as in this country and in England. In England a political decision is rarely taken without military advice. In this country you know better than I do what the situation is.

(Discussion off the record.)

Mr. SMITH. Of course, on the matter of securing bases in France, when we were there it was pretty much the boys who were running for reelection who did not want you to upset the apple cart. It was the idea that after the election they might talk to you. So it seemed to me at the time you were pretty well tied down on the political decisions that the men in political life were making.

In other words, if they are not going to go along politically the program is doomed. Reports reaching us from England this week are to the effect that this fellow Bevan is doing considerable in the labor movement against this whole rearmament program. To me that is dynamite.

(Discussion off the record.)

Mr. SMITH. I hope you are right.

General GRUENTHER. I hope so very much.

Mr. CHIPERFIELD. General, you are talking about a certain number of divisions. We had a chart before us a few days ago which indicated we had a very much larger number of divisions on our side spread all over the world. Places like Turkey and Greece were counted in.

General GRUENTHER. I suppose so, and the Siamese, too.

Mr. CHIPERFIELD. During this emergency is there not some place we can borrow some of that power in order to build it up in Western Europe?

General GRUENTHER. It is very tough, Mr. Chiperfield.

(Discussion off the record.)

General GRUENTHER. I have not heard of the number you indicate, but I am sure somehow you can drum that number up.

I saw a figure 6 months ago in the New York Times that we had 38,000 airplanes, which, matched against the 20,000 of the Soviets, gave us a 2-to-1 advantage. However, I am sorry to say, there was some question about the figure.

Mr. HERTER. Can I come back for a moment to the troops-to-Europe question?

General GRUENTHER. Yes.

Mr. HERTER. Certainly when we get on the floor on the House, as Mr. Vorys said, that question will be raised in one form or another. Is there anything you can tell us that we can use, probably from the point of view of the strategic plans you have in mind, that would give us real assurances that as far as the boys in the divisions over there are concerned there will not be another Dunkirk, so to speak, and that you are pretty clear in your own mind as to where you can hold and

in what period of time and how you could evacuate them in case a situation like that came up.

(Discussion off the record.)

Mr. HERTER. I wondered if there was some general phrase that you thought would be safe enough so that you could be quoted merely in case that question arose, because it is a very vital one, particularly until you get your air cover developed. They are in a very exposed position.

Chairman RICHARDS. I think it is restricted, but could you see any objection to members of the committee using on the floor of the House the military theory about these lines? Obviously, the enemy is thinking about that. Of course, that is military stuff, but it is the kind of matter that has been in the paper, or some of it has. Why could not somebody know more about that?

General GRUENTHER. I certainly think you gentlemen could use any of that. The only thing that comes up there is this: The reason why we have any hesitancy about it all is this: A statement that comes up about where a defense line is does give information to the enemy. If you say it, or Mr. X, the columnist, says it, or somebody like that, or an unidentified military authority says it, I think it is all right.

I do not know whether that answers your point or not.

Chairman RICHARDS. But a member of this committee who has heard confidential information from the military is in a different position. I am not talking about giving some special information, because this committee has a record for not doing that.

General GRUENTHER. I want to pay a great tribute to you on that.

Chairman RICHARDS. We are proud of it.

General GRUENTHER. I think you should be proud.

Chairman RICHARDS. When we go on the floor of the House and the other Members know that we know certain things because we have gotten it from you in executive session, then I believe there should be a statement by the military to us as to what, out of that kind of material, we could use. I was using this line and this other line as an illustration of something we have to work on, because everybody knows you are not going to get the Germans in there if you sit down on the Rhine. For the same reason that it might be harmful to talk about one place it might be harmful not to talk about that other thing. That is what we are up against.

(Discussion off the record.)

Chairman RICHARDS. That is right.

Mr. JUDD. General, when did you first start work on this in Europe? General Eisenhower started in January or February. Were you over there before him?

General GRUENTHER. No, sir. We both went over on the 7th of January and got back here on the 30th. Then I went over on the 6th of February and he got there on the 16th.

Mr. JUDD. The thing that is most disappointing to me in this whole picture is that there has been so little progress in the development of air strength. Maybe it was unavoidable, but almost everything you have told us today about its crucial importance was discussed here fully 2 years ago. Yet you are making more headway in the ground force than you are in the air; it seems to me.

I looked up one of the minority reports of August 1949 of some of the Members who opposed the program, and they said that while they supported fully the end purpose of the legislation:

However, we feel impelled to oppose bill H. R. 5895 on the basic ground that the method of assistance proposed in the bill is not consonant with the major objectives of United States policy—the security of the United States and that of friendly free nations.

Western Europe can be defended only by air power, strategically based and maintained in a constant state of readiness to meet the impact of sudden aggression.

In the opinion of the undersigned, the President should have a clear mandate from the Congress to negotiate with friendly nations, upon their request, for the immediate use and occupancy of airfields, bases, and other essential facilities which will further the purpose of effective collective security in Western Europe.

Yet, 2 years later we have not gotten anywhere to amount to anything on that.

General GRUENTHER. Of course, the machinery for doing that was not set up at that time. I am not familiar with that report, but to get air bases over there has not been undertaken except in the last year.

Mr. JUDD. That is too bad because you say yourself you cannot defend Europe by land forces alone. This has been the criticism: That you are an infantry general, and Marshall is one, and Eisenhower is one, and Bradley is one. We hear people wondering all the time, if this is not just the straight, old, German war-college concept of war based on ground forces. Some of the people who opposed it in the beginning were afraid of just what has happened.

Mrs. BOLTON. Did not the Congress vote a large Air Force?

Mr. SMITH. Seventy groups, and it was vetoed.

Mr. JUDD. That is why I asked you when you got into it, because if you did not get into it until February you cannot be held responsible. However, somewhere there has been a land-bound psychology dominating it instead of an air-power psychology, it seems to me.

General GRUENTHER. Of course, in that statement you read there I think the wording was that it could only be defended from the air.

Mr. JUDD. If I had read the whole section—and I did not read it all, those were the final paragraphs—it made the point that if we send in ground troops without adequate air support and strong strategic air, we are just throwing away the ground troops. And we have not got the air.

General GRUENTHER. I subscribe to that. Of course, there has naturally been delay, Mr. Judd. The fact that they pulled General Eisenhower over there meant it required stern treatment, and that is what he is trying to do.

Mr. VOYTS. General, here is another thing. The Treasury figures showed expenditures for MDAP as of July 30, 1951, as being \$883,773,742. We could explain, as we did before, the lag between the checks going out and the deliveries, but the deliveries are not going to be much above that out of about \$7,000,000,000 that has been made available.

We talk about what the Europeans have not done. I should think the Europeans looking at these figures would be saying, "You have had \$7,000,000,000 to play with over a period of 2 years and have less

than \$1,000,000,000 worth of stuff over here. We do not know what is happening in the United States, but we hear a lot of talk, and nothing is getting here."

What are we to say on that?

General GRUENTHER. I cannot answer that, Mr. Vorys. I hear that same thing from the European countries. One country in particular is quite vitriolic about it because they have made commitments now to call up two Reserve divisions for a month to 6 weeks next summer, and they feel they must have this equipment some time before the end of this year. It does not seem that it will be forthcoming.

I think some of the difficulties are production difficulties. Furthermore, the countries themselves, I think, have some blame in it because in turning in their lists they were a bit slow. There are a variety of reasons, but I am not just up on it enough to know what those reasons are.

Mr. VORYS. As we told you, you worked in the Pentagon before February—

General GRUENTHER. I thought we had an agreement that that was not to be brought up again.

Mrs. KELLY. Mr. Chairman.

Chairman RICHARDS. Mrs. Kelly.

Mrs. KELLY. Thank you, Mr. Chairman. General Gruenther, when you plan the ground troops for any country do you not plan at the same time the amount of air protection needed for those troops?

General GRUENTHER. Yes.

Mrs. KELLY. How could we plan air protection if it was not known whether Congress would consent to sending additional troops to Europe?

General GRUENTHER. Let me get that last one again?

Mrs. KELLY. How could air protection be planned if it was not known whether Congress would give consent to sending troops to Europe?

General GRUENTHER. But the reverse of your statement is not necessarily true, Mrs. Kelly. We still might have planned our air even though the ground was not going to be there. So the reverse of your proposal might not be true.

(Discussion off the record.)

Mr. JUDD. Would it not be better to have predominant emphasis on air with less on ground than the other way around?

General GRUENTHER. Probably so, although a categorical answer to that question could get you into trouble too.

Mr. JUDD. Of course, I do not mean 100 against 0. I am talking about where the emphasis should be.

General GRUENTHER. I am not trying to dodge your question or get complicated with you at all, but here is the thing I want to bring out. Right now we have air bases in here. You could put ten times the air power in there and that would turn out to be a very bad thing, because the iron curtain comes in very close here and you could wake up the next morning and you would have lost all these planes.

So just from the standpoint of the ground trying to prevent the overrunning you get into that problem. Now, just assuming for the sake of argument they had no value as ground fighting forces, but that all you needed was airplanes, and that you did not need ground troops at all, you would still have to have some kind of ground troops.

Mr. JUDD. I did not suggest that. In fact I disavowed that.

General GRUENTHER. I recognize it. I know you did not suggest that and I did not mean to imply you were, but in giving an answer to the question that you would put air power in at the expense of ground power I wanted to avoid giving a categorical answer to that that you had to have a certain balance, and I was using that objective thing as an illustration.

Mr. JUDD. You would not have air bases up close to that salient if we did not have ground forces in there, would you?

General GRUENTHER. No.

Mr. JUDD. They are there in tactical support of the ground forces?

General GRUENTHER. Yes.

Mr. JUDD. What I criticize is lack of more progress in 2 years in getting the strategic air bases farther back.

General GRUENTHER. Yes, sir. But here is the thing, and especially is this true regarding jets. You want your air power—and this is tactical air power, which is the power you are going to use against advancing enemy columns—you want that as far forward as you can because as you know the jet has a very short life in the air.

(Discussion off the record.)

Mr. FULTON. Korea again demonstrated that almost unopposed air power still must need ground power for support.

General GRUENTHER. Yes, I am sure Dr. Judd agrees with that.

Mr. FULTON. That is right.

Mr. VORYS. Along that line, we have heard that we have to furnish antiaircraft and all kinds of things for support and communications. It would seem to me the way to have antiaircraft around an airfield, for instance, would be to have local fellows who could be called up to man the batteries, rather than to export United States draftees at about \$10,000 apiece per year, or something like that, to sit around and wait for the enemy to come. By the same token it would seem to me that an awful lot of the supplies and support personnel even for our own divisions should come from there, rather than to have such a big number in your divisional slice, just as though we have to do everything for our own selves, while you have some Frenchmen and Italians unemployed sitting there and watching us do it.

General GRUENTHER. Take the first one, Mr. Vorys, on the question of the antiaircraft. The antiaircraft for the most part that is going over there is for the protection of the troops themselves. This is mobile antiaircraft, and they are highly trained troops that have to act very quickly when these jets come in. They have to be extremely well trained for that. You cannot stop and have language troubles and worry about all that sort of thing. They have to be first-class people. The problem of using them and getting them there probably would be quite a problem. I do not know if it is possible for it to be done, but it would be very, very difficult.

Now you move into the next field in the question of supporting units. Let us take an item like motor maintenance. We have had garage buildings, and the motors are repaired in those buildings by civilians. What happens if you have to move back or forward? You cannot take the building with you you start out with, and you might not take the civilian with you either. He might have some other ideas about it at that time. At any rate, he is not in a military unit.

So you would find if you were going to do anything on that you would want to get those fellows in a military unit.

That raises another point as to whether aliens are to be enlisted, and the Congress has been considering that. There is a possibility of some sort of solution of that sort, but just pulling them in on a kind of ad hoc basis I would like to utter a caveat about that.

Chairman RICHARDS. General, the members are going in and answering to their names on the roll call. They will be coming back soon.

Mr. VORVA. Mr. Chairman, will you have an afternoon session?

Chairman RICHARDS. I do not think we can finish up with the general this morning. Whatever the committee says on that is agreeable. If we could finish it would be fine, but if any members have questions they want to ask we could do so now.

Let us see. We will have to stop this morning in 15 minutes.

Mrs. BOLTON. Why do we not stop now?

Chairman RICHARDS. Suppose we stop now, and recess until 2:30.

General, there will be some more questions this afternoon, and we will give you a little breathing spell.

General GRUENTHER. That is all right.

Chairman RICHARDS. We will recess then until 2:30 this afternoon. (Whereupon, at 12:30 p. m. the committee adjourned until 2:30 p. m. the same day.)

AFTERNOON SESSION

The committee reconvened at 2:40 p. m., the Honorable James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

General Gruenther, will you continue your testimony. I believe you were being asked some questions when we recessed for lunch. Are there any further questions, gentlemen?

Mr. CHIPERFIELD. Does he have any more charts or anything he wants to show us?

Chairman RICHARDS. Do you have any charts in that line that you want to show the committee?

Mr. CHIPERFIELD. I would like to have you tell us something about the strategic air force in England; how we are working with the English in that area on a strategic air force.

General GRUENTHER. As you know, we have some strategic air bases in England. Then we have some bases under construction in North Africa. We are setting those up now.

Mrs. BOLTON. England includes Scotland?

General GRUENTHER. Well, I do not think we have a base in Scotland.

What we are interested in being able to do, if the aggressor moves, is to get strategic air power from as many places on the periphery as possible in order to make it very difficult to defend against.

The area on that would be North Africa and England. We can do a pretty good job on that. Regarding the second part of your question, Mr. Chiperfield, British is very excellent, from the standpoint of their making bases available and making other facilities available.

(Discussion off the record.)

Mr. CHIPERFIELD. That is all, Mr. Chairman.

Chairman RICHARDS. Mr. Smith.

Mr. SMITH. Have we straightened out the Mediterranean situation in the matter of command?

General GRUENTHER. No, sir, it is not straightened out yet. That is a matter that is before governments now in this command structure, the North Atlantic powers. It is really before the Council of Deputies, Ambassador Spofford's group, now.

(Discussion off the record.)

General GRUENTHER. The specific answer to your question is, it is not resolved at this time.

Mr. SMITH. The concept that General Eisenhower has as to the whole problem in Western Europe is definitely tied up with the situation in the Mediterranean, is it not?

General GRUENTHER. Very much so.

(Discussion off the record.)

General GRUENTHER. You see, what we are trying to do is to hold this area. You cannot do much maneuvering there, but we want to hold it so that a potential enemy does not get it.

That is basically what he is thinking of in connection with that.

Mr. SMITH. If you do not care to answer because of it being secret—

General GRUENTHER. Most of it has been secret.

Mr. SMITH. I mean, so far as the record is concerned. What about Africa? What are we doing there about strategic bases?

General GRUENTHER. We are getting a pattern of strategic bases in here. Then in this area we are getting some.

Chairman RICHARDS. While you are on that, if you do not mind, how valuable would Spain be in this thing as a site for air bases?

General GRUENTHER. It has considerable value for air-bases sites, and, of course, for naval bases also.

(Discussion off the record.)

General GRUENTHER. Spain has value because of its position in controlling the Mediterranean.

Chairman RICHARDS. If you had airfields in Spain, would they be able to handle the same kind of air stuff that you are handling now?

General GRUENTHER. Yes, generally speaking, it would be the same kind but a good deal of preliminary work would have to be done. It is too far back for tactical air.

Chairman RICHARDS. If you lost out on one, you would have the other?

General GRUENTHER. Yes, sir.

Mrs. BOLTON. I realize, of course, you are dealing with the Atlantic Pact countries. The problem of the Middle East, the Greeks and Turks, looms large.

Would it seem to you there could be constituted a middle eastern group like the Atlantic Pact group, or a Mediterranean group; would that make good sense?

General GRUENTHER. Both of them have problems. As you know, really the two basic alternatives are as follows: That there be a separate pact. That is solution 1. Solution 2, that those countries be brought into NATO.

Those are two general solutions that are being offered as alternatives. As to bringing them into NATO, you are familiar with the objections that some of the other countries have been raising to that.

Mrs. BOLTON. Would it not strengthen us in many ways if there were a Mediterranean group?

General GRUENTHER. Yes; but the problem that comes up there is this: When you have a separate pact then the question—this diagram that Mr. Judd was talking about—of coordinating three ways comes in. You would have to coordinate not only that way but you would have to go over and coordinate in what we might call the middle eastern pact.

Mrs. BOLTON. But to hold the Middle East and north Africa, which may need holding, would not that be advisable?

General GRUENTHER. Yes.

(Discussion off the record.)

Mrs. BOLTON. We were told the other night that none of the Arab countries are now friendly to us. It is getting to be a very serious situation for us. Would it perhaps be impossible to secure such cooperative action from these countries at this time?

(Discussion off the record.)

General GRUENTHER. What I have been hoping, under sponsorship of the large powers, particularly the United States and United Kingdom, is that Greece and possibly Turkey could be gotten under General Eisenhower, and then the others could be associated.

Mrs. BOLTON. You think the association would help?

General GRUENTHER. Yes; I do. The Middle East situation is one that bothers us. Of course, the Iranian problem is a difficult one and could result very, very unfavorably for the free world.

The political divisions that exist here are very disadvantageous. There is no other area in the world where the defense would be so easy if you could ever get political agreement. Political agreement does not solve our problems up here in Europe; they simply facilitate them. But political agreement down here means much more.

Mrs. BOLTON. Would you include north Africa in this association?

General GRUENTHER. I do not think so.

Mrs. BOLTON. You would keep that area by itself?

General GRUENTHER. Parts of north Africa are not strategically so critical. What we are trying to do is encourage stabilization in the Middle East. If you ever got these people sitting around the same table, it would help.

Mr. VOYTS. Do any of them have very substantial military forces?

General GRUENTHER. Not very substantial.

It is a pretty difficult situation. But Mrs. Bolton has been out there quite a bit. So I think as a special subcommittee you might consider giving her the task. You people have to solve all the problems of the world, in one form or another, anyway.

Chairman RICHARDS. Are you a fisherman? You were talking about a can of worms. They are pretty hard to untangle when you are baiting your hook.

Mr. VOYTS. The Spanish Ambassador at a lunch the other day said:

What is this foolish talk about Spain won't fight any place except behind the Pyrenees? We want to fight to keep the enemy from getting behind the Pyrenees.

I do not know if that is right. He developed it a little more than that, but that expresses it—that they did not want to have invaders; they wanted to meet them before they became invaders.

He meant to imply they would have a selfish reason in working for the defense of Europe.

(Discussion off the record.)

Mr. VORYS. You said we know what the British and French think. We have asked various witnesses, and they have said that on the political side we are familiar with the political thinking in Britain and France, but I thought the witnesses said that on the military side the military fellows would like to have the Spanish in; is that correct?

General GRUENTHER. That is true. It is one of those problems that are 90 percent political. You really have the problem of how much attention this is going to get in an organization like the NATO organization.

(Discussion off the record.)

Mr. VORYS. About 10 days ago I read there was a NATO agreement about laying down ground rules for troops fighting outside of their own territory, and that General Eisenhower hailed that as a great advance.

General GRUENTHER. That was an agreement for administrative procedures. That is what it amounted to.

You had a situation whereby you have British troops here, you have a British air base here—what is the legal situation. They have worked out a lot of rules and regulations on that. That is what General Eisenhower's reference was.

Chairman RICHARDS. Mr. Mansfield wants to ask you a question.

Mr. MANSFIELD. General, I have three questions. These questions may have been asked before; if so, just ignore them.

Have you any comments to make militarily on Yugoslavia?

General GRUENTHER. Yes.

(Answer off the record.)

Mr. MANSFIELD. The second question: A few days ago there was a newspaper story that General Eisenhower was going to create a one-uniform, one-flag army.

Mr. CHIPERFIELD. Mr. Chairman, we covered that before.

General GRUENTHER. I did not know that he said that. He is for the idea of an European army, but it is primarily an European army.

Mr. JUDD. Kiplinger this week says:

Eisenhower's one-uniform, one-flag army is for troops of the Continent and will not include forces of the United States.

General GRUENTHER. That statement is correct.

Mr. MANSFIELD (presiding). How many American divisions do you think we ought to have in Europe until the present emergency gets straightened out and a European army is ready to take over?

General GRUENTHER. We do not have an idea on that now. We are counting on the number of divisions that are presently contemplated in coming, which are the four that were arranged for earlier this year.

On the question as to whether additional United States ground divisions should come to Europe, we have no view on that at this time. It is a matter that we are studying.

The general's own thinking is something like this: If he comes to a conclusion that it is necessary, he will make the recommendation. He has not yet made that recommendation.

(Discussion off the record.)

Mrs. BOLTON. Mr. Chairman, I have a question.

Mr. MANSFIELD (presiding). Mrs. Bolton.

Mrs. BOLTON. I wanted to ask this question, General: What has happened to the airfields that went across Africa?

General GRUENTHER. I do not know the answer in detail to that. Some of them have done some cracking up and need repairs.

Mrs. BOLTON. The British took one or two, did they not, to use?

General GRUENTHER. Yes. They have a couple. Some them need repairs. I flew over this area when we were down here.

Mrs. BOLTON. I meant south across the continent.

General GRUENTHER. I do not know.

Mrs. BOLTON. Because when I was over there in 1945 with Karl Mundt, we tried to come back via the war fields, and at that time there were some of them already covered over with sand, and some of them in bad shape.

General GRUENTHER. Yes. Unless they have been kept in shape for commercial use I would doubt it if very many of them are in shape militarily. I do not have the answer to your question.

(Discussion off the record.)

Mr. CHIPERFIELD. Would you like to comment on the Voice of America, or propaganda activities?

General GRUENTHER. Well, as a matter of fact, I have a high regard for the Voice of America. I recognize, and you people know infinitely more about it than I do, that there are imperfections in it. You could very easily point out this type of that type of a program is not making the hit that it should, and I think that is true. But as a general proposition it is a very excellent thing, and I think we should be doing more and more in that field.

I am very much interested in what Mr. Gordon Gray is doing. I understand he has just taken over the chairmanship of an organization to coordinate these activities, and I think that is an extremely important field.

Mr. CHIPERFIELD. Do you think it would be wise in our broadcasting, and so on, to do that, rather than putting a tag of the Voice of the United States Government on it?

General GRUENTHER. Well, of course, I think this, sir: In Munich you have Radio Free Europe. I think those people are doing a good job, but I think it is a little delusion to say, just because they call themselves Radio Free Europe, that that means the people who are listening to them would not stamp it as an American Government program. Actually, it is not an American Government program. If Radio Free Europe were beamed to France, for example, it would have quite an effect and you could convince the French people that it was not an official Government program; but as far as what the Czechs think about it, that is another thing, because the Communists keep broadcasting all the time that this is an official American program.

Incidentally, it is a terrible annoyance to the Czechs.

Mrs. BOLTON. You do know it is bothering them?

General GRUENTHER. The programs are coming up with mean tricks like this: They will get a fellow who is informing on other people and they will identify him over the radio and say: "Watch out for John Jones. He is going to inform on you. If you will check the records, you will see he visited so-and-so at such-and-such a time."

Mrs. BOLTON. That would be annoying, would it not?

General GRUENTHER. It would be disconcerting to have all of your private telephone numbers exposed in public.

Mrs. BOLTON. Wonderful.

Mr. MANSFIELD (presiding). Mr. Reece.

Mr. REECE. Whenever my time comes up, Mr. Chairman.

Mr. MANSFIELD (presiding). We are just going around the table. (Discussion off the record.)

Mr. REECE. I have done a little computing here which is based upon one of the primary essentials, I think, for the defense of Europe, and that is air power.

In my questions, what I am leading up to now is whether we are giving sufficient emphasis to the development of air power for Europe.

As I understand it, one of the long-range bombers costs now about \$3,400,000 ready to go into the air, fully equipped. On that basis, if the majority of this \$8,500,000,000 were used for the construction of bombers—just using bombers as an illustration, because that is the most expensive plane, and realizing that tactical air units would have to go with it, that would build about 2,500 long-range bombers. Or, if we take the estimate for the 3- or 4-year program, that is, the estimate of the cost of the 3- or 4-year program until we bring our troops out which, as I understand it, would be around \$30,000,000,000, which would be our share of it in order to meet the deficiencies of the requirements of the various NATO countries, that would represent the cost of something over 12,000 of the long-range bombers.

I am now wondering about this: Assuming that the European nations could under great stress develop reasonably soon, with the aid of the few divisions we have over there, and build up a respectable ground force, what would be the deterrent effect on Russia if we used a larger share of these proposed expenditures, so as to put into being a ready-for-use striking strategic Air Force that these proposed expenditures would buy, let us say, ranging somewhere around 10,000 and 12,000?

General GRUENTHER. First of all, the question of the deterrent value is something that is difficult to estimate. It is a value that resides in the minds of people, because if they decide that they must move, those 10,000 or 12,000 do not stop them from moving. Now, admittedly it will make life pretty miserable for them in their homelands, if they are bombarded by that type of airplane. But they could move in and take over western Europe just the same.

Mr. REECE. If that was accompanied by tactical air support?

General GRUENTHER. I was going to move to accompanying tactical air support later. I was just going to take the hypothesis on the basis of which you made the statement, and then we will move into that other field.

The second thing is this: You have said that you would then count on their building up a few divisions. As a matter of fact, that is what we are trying to get the aid program to do now, that is, to build up these few divisions. If all the money went into air power there would never be any left to build up the divisions. Europe does not have the power to do it now.

Now, taking up the matter of tactical air power, and the suggestion of having a number of these heavy bombers and at the same time some of the tactical air power, we say: "Yes, we agree. We think that is what should be done."

General Eisenhower is giving full weight to the possibilities of air power. It is just a question as to what that balance is, Mr. Reece. I recognize there can be a great difference of opinion as to what that balance should be. There is a school of thought that might say, or that I have heard say, "Put it all in air power."

We do not subscribe to that school of thought.

Mr. REECE. I do not adhere to that school of thought, but I have been somewhat disturbed and the hearings have accentuated it rather than abated it, as to whether sufficient importance is being placed upon the building up of an adequate striking power by air. There is a limit to what we can do in the United States. Here in this committee we have seen the charts and listened to the economists explaining the economy in practically every nation on earth. In nearly all of them outside of the United States, Great Britain, and Belgium, and one or two other exceptions, there is a substantial deficiency and they say we should make up those deficiencies.

Each one of these economists states what the limits are of these other countries. None of them have discussed what our limits may be. We have the responsibility for making up the deficiency. General Bradley comes before the committee with a world map and shows how in every sensitive area all over the world the pressure is being supplied by the Soviet and the satellite troops, and the only power to resist that military pressure is the United States, in effect, except for the aid we get to assist in Europe in the other European countries.

Now, that becomes very disturbing. We have a national debt of something like \$275,000,000,000. We are authorizing a defense expenditure this year of something over \$80,000,000,000, counting the scientific developments. We have a tax bill which I think the economists or tax experts agree is scraping the very bottom of the tax barrel. The only other substantial revenue has to be, as they say, from a sales tax.

We ourselves have a limit somewhere, and you emphasize, as did General Eisenhower, that the industrial capacity of the United States, or our economic strength, is the one great deterrent. That is what causes me to place probably greater emphasis on the air power, which is one important striking power, as I see it, that we can use without exhausting our own economic resources.

Now, that is probably not so much a question as it is a statement, but it shows what underlies my thinking with reference to emphasizing air power, that is, that it is one phase that we do have the ability to build up and strike with effectively without exhausting our resources.

I am wondering to what extent, by spreading ourselves and just going ahead without regard to where our own precipice is, we might not be running the risk of exhausting our economy here and thereby removing the greatest bulwark against communism?

General GRANTHER. I am sure, Mr. Reece, that there probably is some danger involved. It is a danger I am not competent to estimate, but you have had people who have been before this committee who have given that. Now, in an endeavor to arrive at the correct answer to the air problem, in our headquarters, for example, we have a large

number of air officers on the staff. In a key position we have the Supreme Commander and then a Chief of Staff, which is the job I hold, and then a Deputy Chief of Staff for Plans and Operations. All of the strategic plans are under him. That officer is an Air officer—an RAF Air Vice Marshal, who had great experience in the war, mostly with American units, incidentally. The man immediately beneath him, who has direct charge of all operations, is a French Air officer who was in Indochina fighting under combat conditions against guerrilla activities, and so forth. In addition to that, we have an Air Chief Marshal—a four-star Air officer—on the staff.

That in itself does not insure that we arrive at the right answer. I do not want to say arbitrarily that we are going to arrive at the right answer. I say we are studying it and General Eisenhower is giving it his personal attention.

Mr. REECE. One thing that increases my concern is, as I indicated this morning, throughout the hearings on the military side of it most all of the talk has concerned itself with divisions and men. None of the witnesses have talked in the same detail about the number of tactical airplanes and number of strategic airplanes, and what the striking power of them may be, and what the necessity of having them may be, and pointing out the necessity of building up that element of our defense. Nearly all of the testimony has had to do with divisions and men rather than air power, which increases my concern somewhat, General.

I am in favor of building up the strongest defense and putting ourselves in the strongest position that we are capable of doing without endangering our economic position here, which would endanger the whole picture.

General GRUENTHER. Well, Mr. Reece, I recognize the imperfection in my presentation.

Mr. REECE. I do not infer that at all. I am very much pleased with it myself. I am greatly pleased with your presentation and the breadth of coverage, including air power, that you have given in it, more so, I think, than any other witness who has appeared before the committee.

What I said implies no criticism of your presentation at all. Just the reverse is true. You have made a most excellent presentation of which I, personally, am appreciative.

General GRUENTHER. That is very kind of you to say that, but I do not mind the criticism at all. I would like to assure you, though, that the problem is not neglected. I mean, the sense in which we have been doing this has been to try to reeducate the public on what the order of magnitude of a thing is. You instinctively go to a type of measurement that the public understands. To reassure you a little bit, in spite of the presentation, General Eisenhower had all of the Air Chiefs of Canada, the United States, France, and England get together. They met in Washington in May, working on this very problem. Then they came to Paris and worked again for about 10 days. Then we took a working group from each of those countries, and we now have about 10 officers who are doing nothing but working on this problem all of the time.

You have a big problem as to how much air these people can absorb. That is the thing. It is not just a question of making planes. That is what we are trying to work out in addition to the balance.

Mr. REECE. It is one of the things we have not had discussed in very great detail. However, I do not want to belabor that point and I feel I am taking too much time, Mr. Chairman. I appreciate your discussion very much.

Chairman RICHARDS. Was there anything else you cared to say on that?

General GRUENTHER. I do not have any detail to add to that.

Mr. HERTER. I wonder if we could have a recess for 5 minutes to answer to our names? I would like very much to ask the general a question.

Chairman RICHARDS. We will take about a 5- or 10-minute recess and come right back.

(Whereupon a recess was had.)

Chairman RICHARDS. The committee will come to order.

Mrs. Kelly.

Mrs. KELLY. Is there any evidence that civilians have been evacuated by the Russians from that offensive area?

(Discussion off the record.)

Mrs. KELLY. How well armed are the Balkan areas?

General GRUENTHER. In the last year these Balkan satellites have retrained considerably and in ground forces their strength has gone up in the last year. There has been a not quite corresponding increase in air power. Their ground power has gone up faster than their air power. So that the number of divisions they have now compared to what they had a year ago is increased.

Furthermore, the type of division that is being increased is the offensive type of division, namely, an armored division. So from the standpoint of capabilities, which again we always have to keep thinking about as to what could this fellow do—the capabilities of the satellites have increased considerably in the last year.

The question as to whether the Soviets think they can get away with another war by proxy is something that I do not know about. I would think they would have some skepticism about their ability to get away with that type of conflict now, but you cannot tell what they are thinking of.

Mrs. KELLY. To go to another area in the world, if the Arab refugee problem could be solved as quickly as possible, possibly by authorizing \$150,000,000, which it is estimated that that problem would cost, do you think that would enhance the possibility of reaching an agreement in that area of the world?

General GRUENTHER. I would suppose it would enhance it some, Mrs. Kelly, but just how much I do not know. I am not in close enough touch to give a view on that.

I do know from my knowledge of the subject that it is an irritation, and anything that will remove an irritation has value. But my view on that would not be worth quoting.

Mrs. KELLY. Then for my last question. The strength which we hope will come from this collective effort of the free countries will far exceed the strength of the separate national components. Now, remove that collective strength, and how strong would the European area be? In other words, if they by themselves could create one division, by collective strength we should have three divisions. Is that correct?

General GRUENTHER. I do not know. I would not be able to give a multiplication of that worked out, but I would answer your question this way, if that satisfies you, and if it does not, please ask me again: If we can work out a scheme on collective security it will enhance the over-all security very much, as against a system whereby the separate nationalities and the separate nations had to provide their own security. There is no question about that.

The most effective utilization of these forces is a system such as this. Bear in mind as you think of this that no such system has ever been organized in human history before in time of peace. So the fact that you have been able to get this far on it is a unique achievement in the history of the world.

In time of war two nations got together with terrific pressure on and a sense of urgency existing, and there was no question about it that survival was at stake. The issues are not as clear-cut now. They are just as real, but they are not as readily recognizable. To contemplate that this system will not work is just too horrible to believe, because it really, in my opinion, means the future of civilization.

Mrs. KELLY. Thank you, General.

That is all, Mr. Chairman.

Chairman RICHARDS. Mr. Herter.

Mr. HERTER. General, I have in front of me a table prepared by the Pentagon of the amount of end-items or similar items that have been authorized to date for our Armed Forces outside of the MDAP program entirely. They are identical items to those that come into the MDAP program. They amount to appropriations already made of \$20,127,000,000. A figure is in the bill that will be coming before us within the next 2 weeks on the floor of the House, I am told, of another \$29,000,000,000. That is for end-items only and has nothing to do with the pay of troops, or installations, or building of barracks, or anything of that kind.

Now, that is a total of nearly \$60,000,000,000 in end-items, of which presumably some have been used up in training, and some in Korea, and so on. However, it is a very considerable amount today. I assume that we will have a request from year to year of rather similar amounts in connection with our Armed Forces.

My question is this: Since those items are in every way identical with those being shipped, that is, these end-items for equipment of the armed services in Europe, can you see any objection from the point of view of flexibility if this committee should decide merely to authorize the armed services in this country, or the Department of Defense, to assign to you a percentage of those end-items, and we might want to put a top limit on it, or it might be so much of that type of equipment as in their opinion was justified by the speed or the progress that you are making.

General GRUENTHER. No. I see no objection to that, Mr. Herter. I would assume as a part of the premise under which you posed the question that you were visualizing that such things as the programming and giving advance notice, and so forth, would be taken care of in the way it is taken care of now.

Mr. HERTER. I would assume that the Department of Defense would notify you.

General GRUENTHER. Yes.

Mr. HERTER. As to what in their establishment of priorities they felt could possibly be sent to you.

General GRUENTHER. We are interested in this: We are interested in items, articles, and equipment for these people, and that is our fundamental requirement. We are interested in having them in time so that they can make their plans, because for each of these it involves expenses which, as far as these countries are concerned, are significant portions of their budgets. As long as we can get that, and as long as we can plan, and as long as the percentage is such that it does not hamper us in that we are able to go ahead, which is the sense in which I understand your question has been posed, I see no reason against it.

Mr. HERTER. My reason for asking that question is, it seems to me, that it gives you much greater flexibility in carrying out this program if, when you get your men trained, your equipment is ready here. You do not want to be limited by a dollar appropriation as to what can be made here that can be sent out of the country to take care of your needs.

I am, of course, arguing a conviction of my own.

General GRUENTHER. I recognize that.

Mr. HERTER. The second point is, if the entire matter were handled in that way, would there not be a considerable speeding up, so to speak, in the liaison work, because in effect then the whole relationship in getting these end items sent to you would be a contact between yourself and the Pentagon?

We have a good many civilian agencies we have seen from the charts that stand between you, and I can see the value of civilian agencies when it comes to the question of putting the heat on these European countries to mesh their production of the end items you give to them, but when it comes to the final allocation and shipment of the end items to you, this would make a direct pipeline.

General GRUENTHER. That is possible. I would not be able to comment on that, because I do not know enough of the administrative machinery by which that shipment is made. The reason I make that statement is this, Mr. Herter: As you know, we have really just five officers handling this. It would take an organization which is already in existence, that is, the Joint Chiefs of Staff and the Defense Department here have an agency in London that does that.

Mr. HERTER. Your MAAG and JAMAAG would still continue to do all of the screening, and sorting, and everything of that kind.

General GRUENTHER. Yes. The reason I did not give an answer to the question about whether it expedites it or not is because I am not sure enough about that administrative machinery on the expediting. I do not have the facts on that.

Mr. HERTER. But offhand you could not think of any objection, could you?

General GRUENTHER. I do not see any.

Mr. HERTER. Would you not still visualize your economic people in each of the country missions and your political and military people working out their end-item requirements as they do today, taking into consideration what each country within its economic means could contribute?

General GRUENTHER. I would hope that that would always be done, and that in the working out of the administration of the plan you have

in mind nothing would be done to change that very essential coordination.

Mr. HERTER. It would seem to us, watching that operation, that it was a very successful one from the point of view of cooperation. There is nothing written in the law that says it has to be done that way, but it was set up that way, and seemed an excellent arrangement.

General GRUENTHER. Of course, the people who are handling that here may have views on this which would be overriding, and I have not discussed that matter with them.

Mr. HERTER. Surely.

General GRUENTHER. Because on these two points you are asking me about we always come back and say, as long as we can get our matériel and as long as we have flexibility in items, we have no interest, for example, in money values. I suppose there are such things as shipping charges, and so forth, that have to be converted into money, but we, as such, are really not interested in money. We are interested in items, and any system that will get the things and the articles and equipment there is O. K. with us.

Mr. HERTER. As I understand it, the program that we believe in very strongly, such as the training of foreign military personnel in this country, would have to be provided for over and above this.

General GRUENTHER. Yes, sir.

Mr. HERTER. And possibly shipping charges, and packing charges, and overhead costs would have to be provided for separately. But these end items, again with the possible exception of a few mine sweepers and small boats that would be specially built for special purposes in special sections of the world—everything else, as far as we can see in the end-item program is nothing but standard equipment, and there is no way of identifying a tank when it comes off the line as being an MDAP tank or a defense appropriation tank, is there?

General GRUENTHER. No, sir. The tank is what we are interested in.

Chairman RICHARDS. Are there any other questions?

Mr. VORYS. I have just gotten some figures. I do not know whether you know a thing about them, although you know about part of them. They deal with employees in MDAP.

Mr. HERTER. You mean in Washington?

Mr. VORYS. I had thought of your idea, which would be one going toward economy. The grand total is 8,748.

Chairman RICHARDS. The grand total of what?

Mr. VORYS. MDAP personnel. Military in the United States, 239; civilian, 5,108. That is in the Department of Defense. Overseas, 2,327 military; civilian, 620.

The Department of State Program Direction in the United States 88 and overseas 107. Support Activities—this is for State—119 in this country and 140 overseas.

So that there are 5,554 in the United States and 3,104 overseas, and that does not include the members of mobile training teams, or labor forces employed in the various installations for rehabilitation, and it also does not include civilian personnel in performing other functions that you handle, and who run MDAP on the side.

Mr. HERTER. May I say this to the gentleman? I have rather suspected that MDAP money was being used for everything except the kitchen stove. I have gotten a member of the staff here to consult

with the Comptroller General, and he started getting figures, I understand, to show exactly what MDAP money is being spent for. One of the reasons why I was very anxious to get that was that I had the feeling that a lot of things were being charged to MDAP that had nothing to do with the MDAP program.

Mr. VORYS. If we have 5,000 civilians working on a program that up to date came to \$7,000,000,000 of exactly the same sort of thing that we are procuring for our own forces, that is considerable overhead.

Mr. JUDD. Who furnishes funds for all those civilians? Does MDAP furnish them?

Mr. VORYS. The Department of Defense employs them under Mutual Defense Assistance. This comes out of MDAP appropriations.

Mr. HERTER. I had the feeling that a lot of money was being spent under this MDAP appropriation. Some of the objections to the very scheme I am offering were that a lot of things were being done with MDAP money that this committee had no idea about whatever.

Mr. JUDD. Is there a breakdown of what these people are doing?

Mr. VORYS. I am not sure you are familiar with anything except the—

Mr. HERTER. I do not think this is something General Gruenther has to get into at all.

Mr. VORYS. That is, excepting the 2,327 overseas military.

Mr. HERTER. I am assuming they would charge the military to the military program in those countries.

General GRUENTHER. Probably. That is not under us.

Mr. VORYS. Are they charging the salaries of the 2,327?

Mr. HERTER. I am told the information is being typed up in greater detail by a member of the staff.

Mr. JUDD. You say our military advancing groups are not under you, but are under the Pentagon?

General GRUENTHER. Yes, sir. The chain of command on that sort of thing is that the Department of Defense has these agencies throughout, and they come to General Eisenhower for policy matters, but on a matter like this we have no cognizance of it.

Mr. JUDD. That is, General Eisenhower has a considerable say as to what they shall be doing, but the actual doing of it is under the direction of the Pentagon here?

General GRUENTHER. That is right. Supposing that a team in country A decided equipment was being misused, let us say, and therefore they wanted to stop it and change the amounts. We would be consulted. But whether there were 10 men arriving at that conclusion or 25 men, we have not been in that.

Mr. HERTER. May I ask one more question, Mr. Chairman?

Chairman RICHARD. Yes.

Mr. HERTER. At the very outset of the hearings when the Secretary of State was testifying I asked him a question as to why a determination had been made to turn over all of this end-item equipment as an outright grant to the individual nations or individual military establishments, rather than to follow the old pattern of World War II with lend-lease. He said he could not give the reasons, but he knew the matter had been given consideration, and that the balance was in favor of the outright grant, rather than the lend-lease operation.

Do you know what the answer is, or what the pros and cons are on that?

General GRUENTHER. No. I do not think I would be able to give a very good answer to that, Mr. Herter. I can think of some, but I am not sure they are the ones that really governed.

Mr. HERTER. From your own point of view, when the United States Government, let us say, finished this program, or has gone through the major part of it and turned over some \$17,000,000,000 or \$18,000,000,000 worth of war matériel to different nations on the Continent of Europe, or Europe, Greece, and Turkey, in the event you wanted to use that equipment or General Eisenhower wanted to use that equipment in some section such as the Middle East, once you had given it away you would have no further lien on it of any kind whatsoever, would you?

General GRUENTHER. I do not know what the legal status of that is. There is an agreement signed, but I do not know the details of the title to the property. I am sure one of these officers from the Defense Department would know the answer to that question, but I do not know.

Chairman RICHARDS. Is there an officer here who can answer that?

Mr. HERTER. In case that question is raised I would like to know what the arguments are for completely giving it away.

Colonel OFSTHUN. The title passes to the nations.

General GRUENTHER. The question Mr. Herter asked is, if nation A has been given this material and we wanted to send it to the Middle East, can we do it?

Colonel OFSTHUN. They cannot do it without our permission.

General GRUENTHER. But can we do it?

Mr. HERTER. General Eisenhower cannot say that this is needed in the Middle East worse than it is here?

Colonel OFSTHUN. No, sir.

Mr. HERTER. He could not take it from the Belgian, or the French, or the Dutch Army?

Colonel OFSTHUN. No, sir.

Mr. REECE. Would you mind giving the breakdown on that?

Mr. VORYS. I will hand it to you.

Chairman RICHARDS. I would like to state before we finish up here for the members of the committee, that we will have a meeting at 10 o'clock in the morning and this will wind up the appearance testimony, I think. There may be a few other statements put in the record. I hope you will all be present because we will decide the procedure as to writing up the bill, or whether we take up anything else, and things like that. We will take up those questions in the morning.

Mr. HERTER. I was wondering if I could get an answer from General Gruenther on that last question.

Chairman RICHARDS. I know, but I was afraid some of the members would leave before I said that.

Mr. HERTER. General, that is, from your point of view, in the operation of a joint effort, would you feel that you ought to be able to keep some sort of a lien on that property?

General GRUENTHER. I would not feel very strongly about that, Mr. Herter.

Mr. HERTER. I do not know whether it is important, but I am just posing the question.

General GRUENTHER. I do not think so. I am just trying to think. You see, in the priorities the equipment is assigned largely into the

areas where it is most needed. I do not think it is necessary. I have never thought of it before, but I do not think it is necessary. You would have considerable difficulty. I am thinking about it in terms of the European nations themselves, because they make commitments contemplating that they are going to have this equipment assigned to them.

Of course, if there is always a string on it which they think is likely to turn into a whim, I can see very considerable disadvantage to it.

Chairman RICHARDS. Are there any other questions?

Mr. JUDD. Mr. Chairman.

Chairman RICHARDS. Dr. Judd.

Mr. JUDD. I have a question on general policy such as you were discussing at the outset this morning, General. You were speculating as to reasons the 12 men in the Politburo might have in their minds and the considerations they would have to weigh before they would launch an attack on Western Europe. One of them was their recognition that while they could probably overrun Europe and win the first battle, they still would have to win the war against American production.

Do you not think that if they were to start a drive to overrun Western Europe they would simultaneously, or even before that, have to strike at the United States itself in order to cripple our production? So that, we are likely to have either a war that involves us right here with such striking power as they have, as well as a war in Europe, or no war at all?

General GRUENTHER. I think that that is probably true, Dr. Judd. The question again comes up as to whether they calculated it out to that refinement, or whether they might become involved because of a miscalculation, because of a tense situation, or something like that. I think in all logic what you are saying is correct.

Assuming that that is the way that they are also thinking, they have got to be able, if they are going to launch that, to knock out a good part of the American production at the time that they start anything.

Mr. JUDD. The point is if they are going to start a war in Western Europe, they know it would bring us in. So there is everything for them to gain and nothing to lose by striking at us at once. If they can knock out a good part of our production, fine. If they cannot, they are no worse off than if they did not try.

General GRUENTHER. I think so.

Mr. JUDD. So when we talk about attack on Western Europe, must we not be prepared for simultaneous attack upon ourselves?

General GRUENTHER. Undoubtedly.

Mr. JUDD. Our people should understand that much as a minimum. There is no secret about that.

General GRUENTHER. That is right.

Mr. JUDD. Therefore, anything that we do to increase our strength here helps deter attack upon Europe, conversely increased strength over there helps deter attack upon us.

General GRUENTHER. Very definitely.

Mr. JUDD. One other thing: You said this morning—although this may be a little out of your field if you want to regard it as such—you said you thought that history would probably record the attack upon Korea by their satellites as their greatest blunder because it has put

into operation a whole series of speed ups in building the defenses of the free world that probably otherwise would not have occurred.

Now, they made this great mistake in Korea. Should we try too hard to get them out of the mistake? Do they not want a cease fire precisely in order to write off their mistakes and be freer to start operations elsewhere?

General GRUENTHER. That is a possibility. When I made my point, I was referring to the way that they have aroused the free world. Whether a successful cease-fire—and it certainly does not look as though it is being very successful at the moment—is going to so disarm us is a situation which I hope will not occur. That would be the only premise under which I would accede to the import of your question.

I feel that we in the free world—and you gentlemen particularly in your position of leadership because your responsibility is very very great in this—and you are part of the high command just as much as we are—that your job is going to be, and I am sure you recognize it—is to assess this danger and take the necessary measures to see that we are properly prepared diplomatically and in whatever ways are necessary militarily to do it. But as for putting us at a disadvantage if we stop, if the cease-fire is successful, I would not feel that way about it, Doctor.

Mr. JUDD. I suggest it only in the sense that the hostilities are now compelling them to commit their own resources there.

General GRUENTHER. They are committing resources but we are committing some resources, too.

Mr. JUDD. The point is that with a cease-fire they will be able to withdraw their forces. They are sure we are not going to start the war up. We cannot withdraw our forces because we do not know they will not start it up. Thus they get off the hook for operations elsewhere and leave us on the hook.

General GRUENTHER. I recognize the dilemmas in connection with the cease-fire are very tough ones and especially if you get a situation where we have to keep troops there indefinitely.

Mr. JUDD. Let me put it another way: Do you think they are more likely to start trouble in Europe if there is some sort of settlement in Asia than if there is not?

General GRUENTHER. I would feel that there is more chance that trouble will start in Europe if this thing is not settled. In other words, I feel that the successful conclusion of the cease-fire is an advantage from the standpoint of Europe; that it lessens the danger of their attacking Europe, paradoxical as that may seem.

Mr. JUDD. General Bradley, as I recall, said the opposite, that with a cease-fire in Europe—

General GRUENTHER. In Korea.

Mr. JUDD. Yes, in Korea, that we might be in greater danger of all-out war elsewhere because it would allow them to shift their full attention to somewhere else. The North Koreans cannot now carry on much of an operation. The Chinese Communist cannot at the present time. Russia is now at the place where she has to accept a psychological licking or commit her own strength in Asia which she has not had to do heretofore.

Chairman RICHARDS. General Bradley did not say such a thing. He said it might be desirable.

Mr. Judd. He said he thought that well might be the case.

(Discussion off the record.)

Mr. FULTON. Could we ask you to explain your views on the cease-fire, how it would help Europe?

General GRUENTHER. From the standpoint of the treasure that we are putting into it over there, take a point that Mr. Reece has been talking about here. Mr. Reece has been talking about air power, why we do not have more air power. The business of having enough air power there has a very definite relationship with the situation that exists there. From the standpoint of our build-up, we welcome a situation where the Korean situation is settled and more particularly where we get a position in the world where armed conflict is not continuing.

We feel that same way to a lesser extent in connection with Indochina. The fact that you have got armed conflict going on in any place in the world involving the Soviet Union or satellite we consider very much to our disadvantage. I am talking about the disadvantage of the whole free world.

Mr. Judd. If we got a cease-fire in Korea, would you be able to shift air units to Europe?

General GRUENTHER. Probably not, initially. That I do not know. Of course, as you know, there has been an air build-up in Korea. If this is just an armed truce where there is going to be no withdrawal and where they continue to build up, well then, you have had it, of course.

Mr. Judd. The thing I have been afraid of is that it allows the satellites still to tie us up in Asia while the Soviet is able to move its first team elsewhere. I hope you are right, sir.

General GRUENTHER. I hope so, too.

Of course, if we get to a position where we are not leading from weakness, that sort of skullduggery is not going to take place any more.

Now, we suffered those disadvantages during this period. That is one reason why I am so convinced that we have to operate from a position of strength and the sooner we can get there the less skullduggery we will have to face. Admittedly, you have got an extremely difficult problem for the very reason you mentioned.

Chairman RICHARDS. Are there any other questions?

Mr. VORVA. I just wondered: How do you work along with Mr. Cabot?

General GRUENTHER. Well, we don't work directly with Mr. Cabot, Mr. Vorya. Mr. Cabot is in charge here of the organization known by the initials, ISAC. Actually, in General Eisenhower's position as the senior American commander there, I do not remember that any policy directives have come to us from ISAC.

You would remember, Andy.

Colonel GOODPASTER. We have had none, sir.

General GRUENTHER. We are not normally in that chain. We know what is going on but we do not have any relations with him. He has been to the headquarters and I am going to see him tomorrow or the next day.

Chairman RICHARDS. Are there any other questions?

Mr. FULTON. On the Middle East, do you think that we should give a firm push toward developing in the Middle East a good defensive strong point?

General GRUENTHER. I certainly do, Mr. Fulton, if we can get the formula for it. But you recognize that the formula for it, the mechanism by which you do it is a very tough proposition with the tensions that are existing there. Even without any irritation from the Soviets, the internal and external dissensions there are very, very great.

However, from the standpoint of our mission and from the standpoint of the mission of the free world, we want that settled and if there is any encouragement that the United States can give, we are for it.

Mr. FULTON. Of course, there are several problems. There is a continuing civil problem and progress. There is the refugee problem and there is the military problem.

Now, if we limit ourselves to the military problem, do you think it might be possible to start with some sort of a Middle East Pact with, say, Greece and Turkey as a base? Even Lebanon or Israel added in and whatever countries would come into that and work with a group of countries militarily.

General GRUENTHER. You were out, sir, answering the roll call when that question came up before. There are two ways, in general, of handling the Middle East problem. One is to have a separate pact, not in NATO, and the other is to have some kind of an arrangement under NATO. There are disadvantages to both. Neither one of them is a clean-cut solution.

(Discussion off the record.)

Mr. FULTON. Do you think the Israeli Army is a good, cohesive, effective force?

General GRUENTHER. It is coming along pretty well.

Chairman RICHARDS. I would like to say to the gentleman that the general testified on that extensively awhile ago and it is in the record; but you can go ahead and answer it again.

Mr. REECE. May I ask, Mr. Chairman, the general what he thinks is the basis for this intense feeling on the part of some of the countries toward the admission of Spain into NATO?

General GRUENTHER. It is political almost entirely. Franco, in their opinion, has been against the things which they have been standing for. He started out as a dictator, in their estimation.

Mr. REECE. Has not Tito been equally antagonistic to their interests and deep political views?

General GRUENTHER. Yes; they do not quite reason it out on that and I would say this: If war came, there would be no argument at all about associating with Spain. Tito is closer to the firing line. They have more faith that Tito will fight than they have that Franco will fight. I am giving you some of the reasons, not that I necessarily agree with them.

Mr. REECE. There has been done a very good job of building up Tito psychology. He was very unpopular in this country. Now he is pretty well accepted militarily.

Mr. ROOSEVELT. Speak for yourself, Mr. Reece.

Mr. REECE. Militarily, at least, we are cooperating. We are beginning with Spain and there seems to be no question that she will cooperate. But there is still some question about what Tito might do in the event of emergency. I take it you feel that he would fight?

General GRUENTHER. I feel that his separation and his falling out with the Soviets has been real.

Mr. REECE. Self-interest would impel him. On the other hand, there seems to be no question about what the Spanish would do. They have an intense hatred of communism and they are basically and historically good fighters.

We have pretty well submerged and obliterated any feelings we have had toward our former enemies, Japan and Germany and on and on. It is quite unfortunate that other nations are not able to do the same thing.

General GRUENTHER. The world is not quite that perfect.

Mr. JAVITS. I have not been here. Could I ask my question? I do not know whether it is my turn or not.

Chairman RICHARDS. We are just talking around the table. I recognize you now.

Mr. JAVITS. General, I would like to go a little further with this Yugoslav-Spain thing and try to put it in one question. Those of us who favored the Yugoslav food aid which was the only bill we have had before us—of course we have now a bill for military aid—are faced with a difference in the attitudes of our European allies on these two issues.

Now, assuming that both are economic warfare and military preparation, just the most pragmatic possible basis, could you give us in as few words as you wish or as many as you wish the differences which would or should impel us to back aid for one and not for the other, or both, purely on the pragmatic, economic warfare and military warfare base.

General GRUENTHER. Well, my personal view is that we should back aid for both of them; that they both have a military value; that we are trying to achieve a posture of strength and that the advantages in favor of getting the strength attributes in both of these countries outweigh the disadvantages, admitting that there are disadvantages in both cases.

Mr. JAVITS. Do you see any difference, General, in our handling of both? We have given Yugoslavia economic aid and we are about to give them military aid. Of course, Spain the Congress just gave a loan to which is in a sense economic, and I assume that now Congress may go to more economic aid and military aid. Do you see any question of treatment as between military and economic or in administration as making any difference in the situation or should we just go at it pretty much on the basis of what we think we need to do?

General GRUENTHER. I would want to be sure in both cases that we are going to get value received from the price we pay. If we are wanting facilities, services, accommodations, from Spain, I would be quite interested in what the other side of the quid pro quo is going to be because there is such a thing as paying too much. Similarly, with respect to Yugoslavia.

Now, my own feeling is this: That the break between the Soviets and Yugoslavs has been so very definitely sharp that there is no question about their fighting.

Mr. JAVITS. I might say to you that in political terms I think it is the biggest break we have had in the whole struggle with the Kremlin second only to the fact that in Korea we showed we would fight to repel armed aggression, which is equally important. And the thing that I would like to know from you, and it is very important in my own thinking because I have been against the Spanish thing and I

am now critically examining what my own position should be under existing conditions. The thing that will influence my position is advice like yours on the harsh, grim, military facts, one; and the next question that I would like to ask you, if you feel you have covered that, is what effect do you think our relations with Spain will have upon our allies in Europe? They are hollering about it and does it really sink in deep or is it just for the record?

General GRUENTHER. I am not sure whether it is going to sink in and hurt.

(Discussion off the record.)

Mr. REECE. Will the gentleman yield?

My father told me as a child that if you see a black snake, hit it with a rake or a hoe or any instrument available.

General GRUENTHER. That is the theory on which I am proceeding.

Mr. JAVITS. I saw you in operation in Italy and not only on the military side. You may have forgotten, but I have not—I was much instructed when we called on you—but also on the political side. I am asking you these questions advisedly. I think you are a pretty good judge.

General GRUENTHER. Thank you, sir.

Mr. JUDG. Has the government of which this labor man is representative had such terribly strict scruples about recognizing and sending oil and rubber and everything else under the sun to Communist China which is certainly engaging in atrocities as bad as anything Franco or Tito or Stalin himself ever thought of?

General GRUENTHER. The Government from which this laboring man came was the United States Government.

Mr. JUDG. I think you did not answer Mr. Javits' question. He asked if the Europeans—

Mr. JAVITS. I asked if the General felt that it would break down. I wanted the General's view. He says he did not think so.

(Discussion off the record.)

Mr. JUDG. I want the judgment of some of the European laboring people, or persons representing those labor governments, because they have got to determine this matter in the last analysis on some other basis than a choice between desirables and on something other than a theoretical basis—there are survivals at stake.

General GRUENTHER. That is right.

Mr. JAVITS. I have one other question that related to another area, if we may switch the gears now, and that is to this Near East. I was not here all day and I know you will not duplicate and I do not want to impose on my colleagues; but the point of Mr. Fulton's question and the point of my interest in this question of the Israeli Army is this: This is a perfectly open secret—a provision is made for the Near East—and an effort will be made to materially increase that, with the feeling that the increase will go to Israel and that effort will have a lot of backing; one of the strong arguments for that is that in view of the military weakness of the Near East an effective Israeli force in being is of great importance to American security.

Now, whether yes, no, or maybe on that is something, of course, that I would like to hear from you; and if you have covered it, I apologize and withdraw it. But if you feel you would like to add anything to what answers you have made, I would appreciate it.

General GRUENTHER. I have not covered it and I would prefer not to because I do not feel I am well enough informed on that. This is a fact, that the Israeli military force is becoming quite a factor. They are developing militarily pretty well. But I think what has to be decided as a matter of American foreign policy is going to be how the Israelis are going to get along with their neighbors or how their neighbors are going to get along with them.

What I am personally hoping is that enough leadership can come out of this so that we can get some kind of a quiescent situation there, and I would really like to hope that we could get a cooperative situation between the two sides because then the military side would be solved.

(Discussion off the record.)

Mr. FULTON. Could we broaden the scope of that along those lines for the area? That is, along the lines that we were speaking of, of military force, broadening it to the area rather than the Israeli force and these are the Arab forces—take the Middle East area and then compare it, for example, to the importance of Yugoslavia on that flank salient. Is not the Middle East just about as important to us as an area as it is for us to defend Yugoslavia?

General GRUENTHER. The Middle East is an extremely important area; very, very important, and we must find a solution there.

Now, that is a challenge and I think you gentlemen have a great responsibility.

Mr. FULTON. So that those of us who do not choose between the Arabs and Israelis who want to find a high level of living in that area and getting along together, is not that Near East area necessary for the defense of Europe. We cannot hold Europe—or putting it in converse—can you, without holding the Middle East, too, because that will leave your southern flank open.

General GRUENTHER. That is probably true. It is not absolutely true but it comes pretty close to being true and in any case, unless other oil reserves are found, aside from the question of the flank, the question of Middle East oil is one that is of very, very great importance. If you go into a war situation where you hold some place where we were trying to show this morning then you need Middle East oil very, very badly. Paradoxically, if Europe is overrun, you do not need Middle East oil so much.

So aside from the question of being outflanked, there is a very, very great necessity for holding the Middle East.

Mr. FULTON. So then there are two reasons for holding Europe, as defense for the Near East and as a vital segment of our plan. The first is on the motive power to move the machinery and the equipment that you will use in Europe; and secondly, to hold the southern flank against an attack and against the Soviet coming down through the southern Mediterranean littoral.

Mrs. BOLTON. May I ask a question at that point? Would the gentleman yield for a question?

Mr. FULTON. Yes.

Mrs. BOLTON. As I listened to you, I had the feeling that you do not feel it is entirely a matter of an army friendly to us in that particular area that is important. I have gathered that you consider it of vital moment that the whole area be friendly with itself because if it explodes within its own borders, the situation would be exceedingly dangerous to the entire world.

General GRUENTHER. That is what I was trying to say. That is No. 1 priority.

Mrs. BOLTON. It is agreed in the tripartite agreement that the receiving countries are not to use the armies so secured against each other. Do you know of this agreement?

General GRUENTHER. I am not familiar with that. That is outside of our area.

Mrs. BOLTON. On that basis, then, the fact that Israel has a trained and equipped army does not necessarily mean that there would be protection in that fact against anything that might happen within the Near East area itself, nor does it mean that it is only the Russians that are dangerous to peace.

General GRUENTHER. When Mr. Javits was asking the question, the point was, when he was asking me a yes, or no, or maybe, I said before I would answer that, I would want to look at this other one.

Mrs. BOLTON. I wanted to be sure I understood your answer.

Mr. FULTON. May I finish on that point?

Chairman RICHARDS. Mr. Roosevelt had a question. I did not mean to interrupt you.

Mr. FULTON. On that particular point, has it not been said that one of the troubles with France was that she was indulging in the luxury of having two fears when she had better, in these times of austerity, limit herself to the one greater fear? As an American citizen, I think that is exactly right. I think that is the case for all of us in America. We had better face the greater danger.

At this time, the Middle East is quiescent. It is not greatly disturbed as between Israel and the Arabs. So that if we look to what might happen, we are talking of conditions and possibilities that at this time we do have the Russian menace threatening us according to General Marshall more than ever. If we can find some way that is open to have both the Israelites and the Arabs on our side against the Russians, don't you think you had better try to get it?

General GRUENTHER. By all means.

Mr. FULTON. If it means implementing an army or armies in that area with proper agreements to insure the security of the area within itself, we had better try to implement because it is such a vital salient; is that no correct?

General GRUENTHER. Yes; I agree with that, again coming in with that reservation which I made that if in taking one side or the other you have created conditions which caused a great disturbance there, then I would want to take a look, another look at it; that is the only thing I was bringing up. I do not think I am in disagreement with what you are saying.

Mr. FULTON. If you recall, in Greece we had moved in with a military mission that pretty well kept in touch with what was going on through the country and with what they were doing with the aid.

In addition, in Turkey we moved in with a military mission which did likewise.

In China, we did not, which was a very great mistake, in my opinion.

Now, transporting that thought to the Middle East, would it not be possible through a military mission on the order of either Greece or Turkey, United States military mission, to check and watch and see that any defense material supplied was used for the right purpose?

General GRUENTHER. It might be a good idea. I am not sure how feasible it would be. I suppose some arrangement could be worked out.

Chairman RICHARDS. I want to remind the committee it is getting late and we have not gotten around to Siam yet.

Mr. FULTON. I yield to Mr. Roosevelt.

Mr. ROOSEVELT. Mr. Chairman, let me say to the general, if you have answered this or covered this ground before while I had to be out of the committee, please skip it.

(Discussion off the record.)

Mr. ROOSEVELT. It seems to me that before they could ever start on any of these arrows up here, they would have to eliminate the exposure on there southern flank which is Yugoslavia and preliminary to any Western European offensive would be a satellite operation against Yugoslavia if for no other purpose than to tie it up.

General GRUENTHER. From that standpoint, I am in complete agreement, but it would be part of the general move.

When I was talking about the satellites, I was talking about the type of attack where the Soviets could hold back and take no part in it. If they decide to attack they may have a satellite to take on a certain sector, Yugoslavia very definitely being one such sector. But I gave it as my view that I did not think that the Soviets would be able to get by with another satellite attack while everybody stood by and said, "Let them fight it out." I think it would be a matter for consideration of the governments as to whether they would let them get by with it.

Mr. ROOSEVELT. It almost follows that an attack on Yugoslavia by any one of her satellite neighbors really should be properly considered the beginning of No. 3.

General GRUENTHER. Very close to it. Here is the point: the satellite neighbors don't have the strength to put it across at the moment. Unless they get very much stronger, they are not going to be able to succeed on that. So the Soviets are going to have to help for that. That situation can change and will have to be completely reviewed. But I would say if there is a satellite attack against Yugoslavia, we are very close to world war III.

Mr. ROOSEVELT. What would be the reaction today on the part of the British and French particularly to going immediately to the aid of Yugoslavia? Would they do that? Italy, I assume, would be shouting, let's go and help them because—

General GRUENTHER. Again, at this time, I do not know what the reaction would be.

(Discussion off the record.)

Chairman RICHARDS. Are there any other questions, ladies and gentlemen?

(No response.)

Chairman RICHARDS. Thank you, General Gruenther. We appreciate the beginning of your testimony as well as the ending and all in between.

I want to ask all committee members to stay here just a minute in executive session. We will try to get away from here. We are going to find where we are.

General GRUENTHER. Good luck to you all; I have enjoyed seeing you.

Chairman RICHARDS. Thank you, General.

(Whereupon, at 4:45 p. m., the committee continued in executive session off the record.)

APPENDIX

OFFICE OF THE SECRETARY OF DEFENSE,
Washington, D. C. July 30, 1951.

HON. JAMES P. RICHARDS,
Chairman, Committee on Foreign Affairs,
House of Representatives.

DEAR MR. RICHARDS: I have been advised by staff members of your committee that you are interested in information concerning end items in the Department and Mutual Defense Assistance Program budgets. I am pleased to furnish you with such information.

There are attached two tables which show information on major procurement and production included in defense budgets and the value of end-items in Mutual Defense Assistance budgets by fiscal years. Major procurement and production categories as a basis for preparation of budget requisitions in the Department of Defense are not available for fiscal year 1949 and prior years; this one of the major categories in the Department of Defense budget covers only new equipment items and does not include the maintenance of existing matériel, the provision of ammunition for usage, nor the spares and minor components which are procured to support equipment and facilities in service. For the fiscal year 1951, analysis has been made of the total funds available for procurement in the separate table which is attached and shows the relationship of funds available for obligation and funds obligated as of May 31, 1951. For convenience, the report excludes certain categories of production and procurement for the military departments in which MDAP is not a claimant for production or has only minor requirements. The total of all procurement and production funds for the military departments for fiscal year 1951 as of May 31 was \$34,592,000,000 and the total for MDAP as of the same date was \$4,633,000,000.

Sincerely yours,

S. L. SCOTT,
Major General, United States Army,
Director, Office of Military Assistance.

TABLE A.—Major procurement and production costs in defense budgets

[In millions]

Fiscal year	Requests	Appropriations
1949.....		\$3,864
1950.....		2,567
1951.....	\$3,017	22,632
1952.....	22,632	29,743
Total.....	55,412	29,127

TABLE B.—End-items in MDAP budgets

[In millions]

Fiscal year	Request	Appropriations	Obligations
1950.....	\$978	\$978	\$974
1951.....	4,293	4,293	3,823
1952.....	5,717		
Total.....	10,990	5,273	4,797

TABLE C.—Department of Defense, total funds available and obligations for procurement in fiscal 1951, by major procurement programs, as of May 31, 1951—Regular and MDAP funds

OFFICE OF THE SECRETARY OF DEFENSE,
Washington, D. C., August 7, 1951.

HON. JAMES P. RICHARDS,
Chairman, Committee on Foreign Affairs,
House of Representatives.

DEAR MR. RICHARDS: In the hearing before your committee on July 2, 1951, Mr. Herter requested information with respect to training programs under the Mutual Defense Assistance Act.

Although information has been furnished to your committee in this regard, I am attaching more complete information with respect to this subject which may be inserted in the record.

Sincerely yours,

S. L. SCOTT,
Major General, United States Army,
Director, Office of Military Assistance.

Attachment.

DEPARTMENT OF STATE,
Washington, July 20, 1951.

The Honorable JAMES P. RICHARDS,
Chairman, Committee on Foreign Affairs,
House of Representatives,
Washington, D. C.

DEAR MR. RICHARDS: In my testimony before your committee on July 12, Mr. Mansfield asked me (p. 599 of transcript) to furnish a statement with regard to the role of United States representatives abroad. Accordingly, I now forward you a statement on this, prepared for me by the Treasury Department. I am forwarding a copy of this statement to Mr. Mansfield.

Yours very sincerely,

THOMAS D. CABOT,
Director, International Security Affairs.

UNITED STATES TREASURY REPRESENTATIVES ABROAD

For many years the Treasury Department has maintained offices in selected places overseas staffed by personnel of its administrative and investigative bureaus. In the early days of World War II, when the United States began to assume a dominant role in the world economic and political picture, the financial interests of this Government in world affairs expanded accordingly, and it was found necessary to establish offices staffed by financial policy officials. These officials, who bear the title "Treasury Representatives," are members of the Treasury's Office of International Finance. They represent the Secretary of the Treasury in a few foreign capitals in which the United States Government has a particular financial interest and usually act as the principal financial officers on the respective Ambassadors' staffs. The primary responsibility of this professional staff is to keep the Secretary of the Treasury, the Department of State, and other interested agencies of the Government, fully and promptly informed with respect to major financial questions arising between foreign governments and the United States.

It is the considered policy of the Treasury to limit the number of its overseas offices and to maintain the maximum flexibility in opening and closing offices—always, of course, in consultation with the Department of State. As of July 15, 1951, Treasury representatives were stationed in only nine capitals: London, Paris, Rome, Brussels, Frankfurt, Stockholm, Cairo, Tokyo, and Manila. Their offices are small; 16 financial economists comprise the whole of the professional staff stationed in these 9 centers. The size of the staff, and the places in which offices are located, have varied from time to time. During the war period, for example, Treasury officials acted with the commands in the theaters of operation around the world on military currency problems, exchange problems, and inter-governmental accounting associated with military activities. This relationship between the military and the Treasury has continued in the principal occupied countries in connection with rehabilitation programs for such areas, currency reform, and conversion operations, exchange systems, property and claims questions, and other subjects.

Broadly speaking Treasury representatives are stationed in two kinds of country—those containing highly developed, important international money markets of the sort which can have a significant influence on the pattern of world exchange rates and the course of financial affairs generally; and those, on the other hand, which, while not important in the world money market, are of particular concern to the United States Government. Typical examples of these two types of post are London and Manila, respectively.

Treasury representatives are selected primarily for their special competence in domestic and international monetary, banking, and exchange problems. Experience and training in this field have in recent years been of growing importance to the foreign policy of the United States. Thus the Treasury representatives, while maintaining their primary function of Treasury employees reporting to the Secretary of the Treasury, have been able to be of service to other agencies of the Government. Their continuous contacts with the finance ministries of the countries in which they are stationed have added to their ability to render such services. For some years past Treasury representatives have served as financial advisors to our ambassadors, and have as a result become members of the respective embassy teams. A similar evolution took place later with the advent of the ECA mission overseas. Under an arrangement requested by Ambassador Harriman in June 1948, the Treasury representative

in a country to which an ECA mission is assigned normally acts also as finance officer of the ECA mission. Similarly, Treasury representatives have acted as advisers to the chiefs of military occupation organizations. The consolidation of functions embodied in these arrangements provides a single point of contact with foreign officials on financial matters, resulting in what might be described as built-in coordination of the interests of the Treasury, Department of State, and ECA in the financial aspects of the foreign-assistance programs. The arrangement also has done much to overcome the difficulties which otherwise would have been created for the foreign-assistance programs by the scarcity of qualified senior financial men available to the Government.

The functions of the typical Treasury representative at present are therefore threefold:

1. In his primary capacity as the representative of the Secretary of the Treasury, he maintains liaison with the Minister of Finance of the country in which he is stationed. He acts as a channel of information and views on subjects with which the Secretary is concerned as the Cabinet member having primary responsibility for the financial affairs of the Government. In addition to the traditional interests of the head of a national Treasury, the Secretary has, in recent years, acquired responsibilities because of his position as United States Governor of the International Monetary Fund and the International Bank for Reconstruction and Development and his duties as chairman of the National Advisory Council on International Monetary and Financial Problems. The Treasury representative confers with the Finance Ministry concerning foreign-exchange rates, the country's gold and dollar reserve position, exchange restrictions and practices, and the terms and conditions of United States' assistance. He advised other departments and agencies of the United States Government (e. g., Army finance officers, Federal building operations officers, etc.) concerning appropriate exchange rates, overseas banks authorized to be depositories for United States Government funds, consistency of proposed operations with over-all financial policy of the United States Government; etc. When requested, and where appropriate, he advises foreign governments concerning the institution and management of improved currency and banking systems.

2. As a member of the Embassy team the Treasury representative advises the Ambassador concerning the broad range of domestic and international financial conditions of the country to which the Ambassador is accredited. Furthermore, he normally acts as the financial attaché in the economic branch of the Embassy and usually assumes responsibility for the financial reporting requested of the Embassy. He also assists the consular branch by advising United States citizens, the executive branch of the Government, and the Congress concerning the personal problems which American citizens encounter as a result of the exchange controls of the country concerned. His constant contacts with the Finance Ministry of the country in which he is stationed give him a peculiarly helpful background for performing these services.

3. As the finance officer of the ECA mission he performs similar advisory duties for the chief of that mission and negotiates with the government concerned on such matters as counterpart policy, budgetary and tax reform, general monetary policy, and other matters relating to the financial stability of the country receiving ECA assistance. In cases where the representative is stationed in an occupied country, he similarly advises both the military and political representatives of the United States Government on financial matters.

Treasury representatives are stationed in four key NATO countries—the United Kingdom, France, Italy, and Belgium. The current change of emphasis from economic recovery to strengthening defense in the NATO area has caused a corresponding shift in the emphasis, but not the field of activity, of the Treasury staffs in these countries. They act as financial advisers to the Embassy-ECA-MAAG teams at the country level. This latest development reflects the fact that financial considerations are one of the primary limiting factors to a rapid buildup of European defense programs.

In the Middle East, and to a lesser extent in the Far East, Treasury representatives operate on a regional basis, being on call for consultation as needed in a number of different countries. For several years they have conferred with various governments in these areas concerning basic financial problems such as the formation of improved monetary systems, the issuance of new types of currencies, the development of banking systems, the operation of budgets, and the revision of tax systems. While no representatives are permanently stationed in the foreign capitals of the Western Hemisphere, Office of International Finance officials are available to visit these other capitals when and as required.

DEPARTMENT OF STATE,
Washington, D. C., July 23, 1951.

HON. JAMES P. RICHARDS,
Chairman, Committee on Foreign Affairs,
House of Representatives, Washington, D. C.

DEAR MR. RICHARDS: In my testimony before your committee on July 12, Mr. Roosevelt raised certain questions (p. 644 of the transcript) regarding further information on the organization of the Mutual Security Program. I am, therefore, enclosing a supplementary statement and am forwarding additional mimeographed copies to all of the Members of your committee.

Yours very sincerely,

THOMAS D. CAROT,
Director, International Security Affairs.

SUPPLEMENTARY STATEMENT BY THOMAS D. CAROT

In response to the request of Congressman Roosevelt at page 644 of the transcript, I am glad to submit a supplementary statement of my personal views on the question of the organization of the Mutual Security Program.

The committee has received a wide variety of testimony on the subject. This is not surprising, in that the problem is a difficult and complex one and one on which the experts have disagreed.

On the one hand, the Rockefeller and Gray reports recommend that various overseas economic operations be combined in one agency, but specifically exclude from the functions of this agency the military end-item program which constitutes the bulk of the proposed Mutual Security Program. Mr. Rockefeller in his testimony gave particular emphasis to the distinction. Mr. Paul Hoffman's testimony was interpreted in some quarters as favoring a single agency which would include military and economic aid functions, but I believe his testimony at pages 801 and 811 of the transcript indicates that he was in at least considerable doubt on the point. The Brookings Institution, after the most careful study, has made recommendations to which I believe the committee will want to give the most careful consideration. After analyzing the different kinds of activities which go into the formulation and implementation of economic and military assistance programs, it recommends a multiagency operation in which the State Department has the central role. The Committee on the Present Danger has made a proposal which has been interpreted as calling for a single agency for both the military and the economic aid programs, but actually its proposal contemplates that the Defense Department would continue to perform important operating functions with respect to end-item assistance and its report also recognizes the need for an interagency committee to facilitate interagency coordination and agreement.

In this supplementary statement I do not wish to repeat the substance of my prior statement, which outlined in some detail the manner in which the present organization functions. My purpose is rather to clarify the issues on the question of organization in the light of the various statements and reports which are before the committee.

I start with some basic propositions which should clarify the nature of the problem. The first four propositions I do not suppose any one would quarrel with. The others seem to me inevitably to follow.

AGREED PROPOSITIONS

A. The Department of Defense determines military questions subject only to the President; no other agency should be given authority over the Department of Defense on military questions.

B. The administration of a military-aid program requires constant military decisions, with respect to requirements, capabilities, priorities, etc. It also requires the services of the military procurement agencies and military personnel abroad.

C. The State Department determines foreign policy subject only to the President; no other agency should be given authority over the State Department on questions of foreign policy.

D. The administration of a military- and economic-aid program requires constant decisions on questions of foreign policy.¹

¹ Illustrations of the kind of foreign policy questions which arise from day to day in the administration of this program are given at pp. 11-12.

COROLLARY PROPOSITIONS

X. Since the Defense Department must be the operating agency for military end-item aid, at least two operating agencies are needed: Defense, and one other. A single operating agency for the whole Mutual Security Program is thus impossible.

Y. The Defense Department is also inevitably involved in the top administration of the foreign aid program to the extent that military questions are involved.

Z. The State Department is inevitably involved in the top administration of the foreign aid program to the extent that foreign policy questions are involved.

CONCLUSION FROM THESE PROPOSITIONS

No one person or agency (except the President) can be given the whole responsibility for the foreign-aid program or the authority to run it.

THE PROBLEM

In the light of these propositions, the real nature of the problem becomes clear. It is, how best (a) to coordinate the work of the agencies involved, (b) to get decisions where there is disagreement among the agencies, and (c) to provide leadership for the program as a whole.

This is essentially the problem for which various solutions have been proposed both in testimony before this committee and in written reports.

ALTERNATIVES

As listed by Mr. Foster, the four principal alternatives are—

(1) Create a new agency which would have the central role in the entire aid program, including military end-item aid, and would be the operating agency for economic aid. The Defense Department would continue as the operating agency for end-item aid. (This is the Committee on the Present Danger proposal.)

(2) Make the Secretary of State responsible on behalf of the President for the coordination and leadership of the whole program through the mechanism of an interagency committee chaired by a top-rank State Department official responsible directly to the Secretary. The Defense Department and ECA (or a successor agency) would continue as the main operating agencies. The State Department would not be an operating agency, except for certain technical-assistance programs. (This is the present system and is the one proposed by the executive branch.)

(3) Create an economic operating agency which would perform ECA's present functions and would also have additional functions in the overseas economic field now performed elsewhere in the Government, such as all claimancy, foreign materials development and procurement and all technical-assistance programs. (This would be consistent with the Brookings, Rockefeller, and Gray recommendations.) Military assistance and the coordination of military and economic assistance would presumably be handled as in (2).

(4) Create a Department of Foreign Affairs, comparable to the Department of Defense, with four subordinate departments responsible to it, concerned with military, political, economic, and informational activities.

There has also been suggested a fifth alternative:

(5) Create a small coordinating agency responsible directly to the President, which would coordinate and give direction and leadership to the Defense Department, to the State Department, and the economic operating agency.

ELIMINATION OF THREE ALTERNATIVES

Alternatives (3), (4), and (5) may be eliminated at the outset from further consideration, for different reasons.

Alternative (3) is really only a variation of alternative (2) and need not be considered as a separate alternative. I personally do not wish to express an opinion either for or against expanding the responsibilities of an economic-aid operating agency to include related activities. To do so would only distract from the central issue which is here presented; i. e., the method by which military aid and economic aid should be coordinated with each other and with the conduct of our foreign policy.

Alternative (4)—that of creating a Department of Foreign Affairs with four subsidiary departments—was mentioned both by Secretary Acheson and Mr.

Foster in their testimony, but neither of them indicated that he was prepared to support it as of today. In my opinion, such a major reorganization of the executive branch of the Government could hardly be accomplished in the time available for consideration of the proposed Mutual Security Program. Accordingly, I do not believe it is sensible to consider it now as a practical alternative.

Finally, alternative (5)—the creation of a superagency coordinating office—should also be eliminated from consideration at this time. While in some respects this plan seems to me superior to the idea of putting the central responsibility in the economic operating agency, it does have obvious disadvantages. One is that it would mean adding another entity to the three which are already intimately involved. Another is the anomaly of creating an agency which appears to be on a higher level than the Defense and State Departments with respect to part of their activities.

INTERAGENCY COMMITTEE A NECESSITY

Before considering further the two alternatives remaining, I wish to point out that in either case it would be necessary to make use of the committee device to insure interagency coordination and agreement. A program as complex as the foreign-aid program inevitably gives rise to differences of opinion among the agencies concerned with the program. Since it is obviously impossible to submit all these differences to the President for resolution, the solution is to provide a constantly available forum where the differences can be threshed out and settled. For this purpose the committee device is really the only one available, much as some of us may dislike "government by committee."

The committee should not consist of the agency heads themselves who simply do not have the time to meet regularly, but should be composed of top officials responsible directly to the agency heads and clothed with the authority to make decisions that will stick.

I do not believe there is any disagreement among those who have studied this problem as to the necessity for such a committee. It was recognized by the Committee on the Present Danger. The question might arise in the minds of the committee as to why no such committee was necessary in the case of the ECA, but, as I shall point out below, the organization problems involved in the ECA and in the presently proposed Mutual Security Program are radically different in a number of respects.

THE REMAINING QUESTION

I hope that in the preceding pages I have been able to clear away some of the confusion that has existed in the discussion of this organizational question. If my conclusions thus far are sound, the remaining question is a relatively narrow one. Although it is not an easy question and one upon which reasonable men can and do differ, it is also a question which is not as significant as might have appeared at the outset.

The question simply is: "Granted that the Defense Department, the State Department, and an economic operating agency are all necessarily involved, who should be the chairman of the interagency committee that must make the broad decisions, and who should in his person provide the focal point for the program as a whole?" The choice narrows down to two: the administrator of the operating economic agency or a top-rank official in the State Department.

THE ANSWER

The answer, in my opinion, is that because the entire program is a vital part of our national foreign policy and because the main questions arising in the course of its administration are foreign policy questions, the Secretary of State must be the central figure in the program. Since he himself cannot devote full time to the job, he must delegate the responsibility to an individual who will be directly responsible to him.

ECA SET-UP NOT A PARALLEL

The advocates of giving the economic operating agency the key role in the program point to the precedent of the ECA. They argue that the ECA was just as much a function of United States foreign policy as is the proposed Mutual Security Program, and that it was given status independent of the State Department in the face of warnings that "there cannot be two Secretaries of State," and that, in spite of these warnings, the operation was a success.

There are, however, various circumstances which make the mutual security program problem radically different from the ECA problem:

(1) The basic policy under which the ECA operated was relatively simple and was defined in the Act in specific terms. Accordingly, it was possible for the ECA to operate within the framework of that policy. In the case of the Mutual Security Program, however, the underlying policy is far too general to provide adequate direction for an independent agency, and the implementation of this broad policy involves constant day-to-day foreign policy decisions. For example:

(a) Country A says it cannot make any greater defense effort. The United States experts believe it could, but recognize that its cabinet has a political problem and may well fall if it is pushed harder. A change in cabinet would not necessarily be for the better. What to do?

(b) Country B occupies an area the United States is determined shall be denied to the Communists, but its government has a record of corruption and waste. How far and by what means should the United States seek to establish budgetary and fiscal controls?

(c) Country C is receiving military and economic assistance. A Communist coup appears to be imminent. Do we cut off aid?

(d) There is evidence that country D, which is receiving aid, is siphoning off Government funds in an effort to "fix" an election in which the Communists offer a major threat. What do we do?

As these examples make clear, the situation in each recipient country is different and is constantly changing. Accordingly, our specific policies with respect to aid programs must be varied, dynamic, and flexible. Thus, it would be impossible to provide a reasonably stable policy framework, such as was implicit in the Marshall plan, within which an agency independent of the State Department could "operate."

(2) A second major difference between the Mutual Security Program and the ECA is that in the latter case, while certain types of action were expected of recipient countries, the process for them was not too painful. The MSP, however, requires constant efforts on our part to encourage recipient countries to increase their own defense efforts. The result is almost continuous negotiation, which is carried on coincidentally with negotiations for other ends. For example, we may simultaneously be endeavoring to persuade a particular Government to take a certain position with respect to the rearmament of Germany, to work for the admission of Greece and Turkey into NATO, to concede certain base rights or military privileges to the United States, to take action in a colony looking toward a greater measure of independence for its peoples, to reduce trade barriers, to send more troops to Korea, to take certain action in the UN, to provide aid to Yugoslavia, etc., etc.

It seems clear that all of these negotiations must be in the hands of the State Department, that the State Department must decide strategy and tactics with respect to them, and must determine relative priorities in the objectives for which we are negotiating. Yet it would obviously not be wise to give to any agency the central role in the foreign-aid programs without giving it authority to negotiate with recipient countries.

(3) Perhaps the most striking difference between the ECA set-up and the Mutual Security Program is the vital role played in the latter by an international organization of which the United States is a part, namely the North Atlantic Treaty Organization. While the ECA operation involved dealings with the OEEC, we have never been a member of that body and its functions have been far more limited than those of NATO. The nature and extent of our contribution to the collective defense effort in Europe is much influenced by the determinations of this international organization. At the same time, the NATO Council of Deputies and Standing Group are constantly confronted with questions affecting our over-all military and foreign policy, so that our representatives necessarily report to the State Department and the Defense Department.

These differences can perhaps be summed up by saying that economic operations were at the heart of the ECA program, while negotiations which are essentially political and constantly involve fundamental questions of military and foreign policy are at the heart of the Mutual Security Program. These constant negotiations are at the same time the most important and the most difficult aspect of the foreign aid program. The technical problems of determining military and economic needs, and of furnishing the aid once its character and amount are decided upon, go forward smoothly and with expedition. The most troublesome factors in the program as a whole are political in nature. As

a businessman myself, I feel qualified to say that they are not capable of being dealt with by a single administrator outside the State Department. As was suggested by the "propositions" with which I began this statement, he could not in the nature of things be given the authority to make the decisions that have to be made.

COMPARATIVE MILITARY EXPENDITURES OF WESTERN EUROPE AND OF U. S. S. R. AND ITS EUROPEAN SATELLITES

The military budgets publicly announced for 1950 by the governments of the U. S. S. R. and its European satellites before the outbreak of the Korean War amounted to the equivalent of \$12.5 billion, or 12.5 percent of their total output of about \$100 billion. It is estimated that indirect and hidden expenditures for military purposes, such as materials supplied by various nonmilitary ministries for military purposes, industrial construction for the production of military supplies, and various military items hidden in the budgets of other agencies, amount to an additional \$12.5 billion, bringing the total of \$25 billion (25 percent of the gross national product); the 1951 total is expected to increase another 20 percent—to \$30 billion, or 28 percent of the 1951 gross national product.

The estimated total military expenditures for Western European countries¹ for 1950 amounted to the equivalent of \$7 billion, equal to 5 percent of the total output of those countries—about \$135 billion. The Western European countries plan sharp increases in defense outlays in 1951, but they will still be spending far less than the U. S. S. R. and its satellites. Information is not available for all the Western European countries, but those in NATO are increasing their defense spending by over 50 percent in 1951, and will devote nearly 8 percent of their 1951 gross national product to defense purposes.

The United States estimates of defense expenditures for the fiscal years beginning in 1951 and 1952 represent 7.5 and 14.1 percent, respectively, of the gross national products.

AMERICANS FOR DEMOCRATIC ACTION,
Washington, D. O., July 19, 1951.

HON. JAMES RICHARDS,
Chairman, House Foreign Affairs Committee,
United States Capitol, Washington, D. O.

DEAR CHAIRMAN RICHARDS: I am enclosing two copies of a statement of Americans for Democratic Action with respect to the mutual-security program. I shall be grateful if you will make this statement available for committee consideration by inserting it in the record of your hearings.

Sincerely yours,

JOHN F. P. TUCKER,
Assistant Executive Secretary.

STATEMENT WITH RESPECT TO THE MUTUAL SECURITY PROGRAM SUBMITTED BY AMERICANS FOR DEMOCRATIC ACTION

Americans for Democratic Action, an organization of non-Communist liberals, dedicated to the achievement of freedom and economic security, endorses fully the broad principles of the Mutual Security Program. ADA believes that the primary purpose of American foreign policy must be to relate the United States responsibly and creatively to the common efforts of the free nations of the world to prevent the spread of tyranny, to avoid a global conflict, and to lay the foundations for an ordered world. These objectives are those of the Mutual Security Program.

The Mutual Security Program is another milestone in the development of America's postwar foreign policy. It brings together for the first time in one coordinated whole most of the positive elements of the last 5 years. The Mutual Defense Assistance Program, the Economic Cooperation Administration's opera-

¹ Austria, Belgium-Luxemburg, Denmark, France, Germany (Federal Republic), Greece, Italy, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and the United Kingdom. The figures include, in general, direct military expenditures, plus expenditures for paramilitary troops, atomic energy research, and military stockpiling. The Soviet Orbit estimate, including direct, indirect, and hidden expenditures is believed to be somewhat more inclusive than the figures for Western Europe of the United States.

tions in Europe and in Southeast Asia, the Technical Cooperation Administration in the State Department, the various United Nations relief and aid programs—all are included (and many are expanded) in the present proposal. Of special importance at the present moment is the newest of the programs, the United Nations Korean Reconstruction Agency to which the United States is asked to contribute the modest sum of \$112.5 million. Americans may well be proud of the constructive approach offered in these integrated efforts at bolstering the free world through the common efforts of all its members.

In some respects ADA believes the Mutual Security Program is not bold or imaginative enough. While correctly stressing the overriding need to strengthen the military muscle of Western Europe and other nations on the perimeter of the Soviet world, the President's message fails adequately to emphasize that even after the rearmament job is completed, there will remain the longer-run and vital task of giving economic and technical aid to the underdeveloped areas of the world to help them lift their living standards. Point 4 is no more emergency program; it must be an integral part of our total foreign policy for years to come.

In particular, ADA regrets that the Administration program makes no recognition of the comprehensive report issued by the so-called Rockefeller Board on the economic development of less advanced areas. This report offers a detailed outline of the organization and financing of a far-reaching development program, emphasizing especially the creation of new international agencies. United States sponsorship of such agencies would be a tremendously powerful weapon in the war of ideas. At present many Asians cannot help but look at our point 4 program as merely the tail end of a military policy which they do not yet quite trust. We must make it very clear, in the words of the President, that "the only kind of war we seek is the good old fight against man's ancient enemies—poverty, disease, hunger, and illiteracy."

ADA urges the Congress to act speedily to give life to the Mutual Security Program. We cannot withdraw from the rest of the world; we must not risk all by plunging blindly ahead alone. Security, with justice, for the entire free world means security for the United States.

MEMORANDUM OF COMMITTEE ON THE PRESENT DANGER, WASHINGTON, D. C.,
ACCOMPANYING CHART OF SUGGESTED UNITED STATES ORGANIZATION IN EUROPE

Pursuant to the request of the chairman and certain other members of the House Foreign Affairs Committee, the Committee on the Present Danger submitted on August 3 a draft of a foreign aid bill, and an organization chart showing the Washington organization proposed under it. At that time we promised to furnish later a chart for the United States European organization which had also been requested. This is now submitted herewith.

We have omitted the international organization both because it is confusing to incorporate it in the same chart and because changes in it are a question separate from the present bill.

The object of almost all of the aid to Europe now proposed is to support General Eisenhower as Supreme Commander in erecting a real defense. The adequacy of the United States organization should be judged on this basis, and this must be its mission.

At present, confusion of organization and divided authority rule. That the set-up works is a tribute, not to it, but to the devoted men struggling under it.

A major step is necessary to correct matters. Accordingly, we propose that a new post be created to be called United States Ambassador-at-large for Europe. We propose that this officer wear two hats, reporting as to political matters to the Secretary of State and reporting as to foreign aid matters to the Mutual Security Administrator.

He would need three deputies, one for NATO who would deal with political matters and would be the United States member of the Council of Deputies. The second deputy would be for the Office of European Economic Cooperation (OEEC) and the Finance and Economic Board (FEB) on both of which he would serve as the United States member. The third deputy would be the United States member of the Defense Production Board.

In the draft of the bill submitted on August 3 to the House Foreign Affairs Committee, we described the top-level officer above proposed by the old title of United States Special Representative in Europe, created for the European

top-level post under the Marshall plan. However, since that time the NATO functions have arisen and the two must be kept in step. A new title to make clear that the above office is a new one is, therefore, proposed.

In the bill we have provided legislative authorization for only one deputy, which would be the deputy for OEEC. This is because the United States representative for NATO is already in existence, and because the United States member of the Defense Production Board (DPB) also serves as the head of the special mission of ECA to the United Kingdom so that no new legislative posts for either of them seem requisite. Designation of these men as deputies of a new Ambassador-at-large would be merely an administrative matter which could be done by directive.

Under the above plan, the special missions to the participating countries would report to the new Ambassador-at-large through his deputy for OEEC.

The Joint Military Advisory Group would serve in an advisory capacity to the Ambassador-at-large. The Military Advisory Groups (MAGS) in the different countries would serve as advisers to the special missions of the Mutual Security Administrator in such countries. The chief of each such special mission would rank next below the Ambassador to such country.

A recent precedent exists for the above proposal that the new top-level man wear two hats and report in his different capacities respectively to two Cabinet rank officials in Washington. When Mr. John J. McCloy undertook his mission to Germany in 1949, a serious organizational problem was solved by appointing him both as the High Commissioner—in which capacity he reported to the Secretary of State—and also as the senior representative of ECA in Germany—in which capacity he reported to the Administrator of ECA. This placed the ECA mission under him. This arrangement has worked successfully. If the man selected is the right man and is acceptable to both Cabinet rank officials whom he must serve, such a set-up is entirely practical.

TRACY S. VOORHEES, *Vice Chairman.*

DEPARTMENT OF STATE,
Washington, August 7, 1951.

Hon. JAMES P. RICHARDS,
House of Representatives.

MY DEAR MR. RICHARDS: My attention has been called to H. R. 5020, a bill to promote the foreign policy and provide for the defense and general welfare of the United States by furnishing assistance to friendly nations in the interest of international security, which you introduced in the House of Representatives on August 1, 1951. I have also read your accompanying explanatory statement.

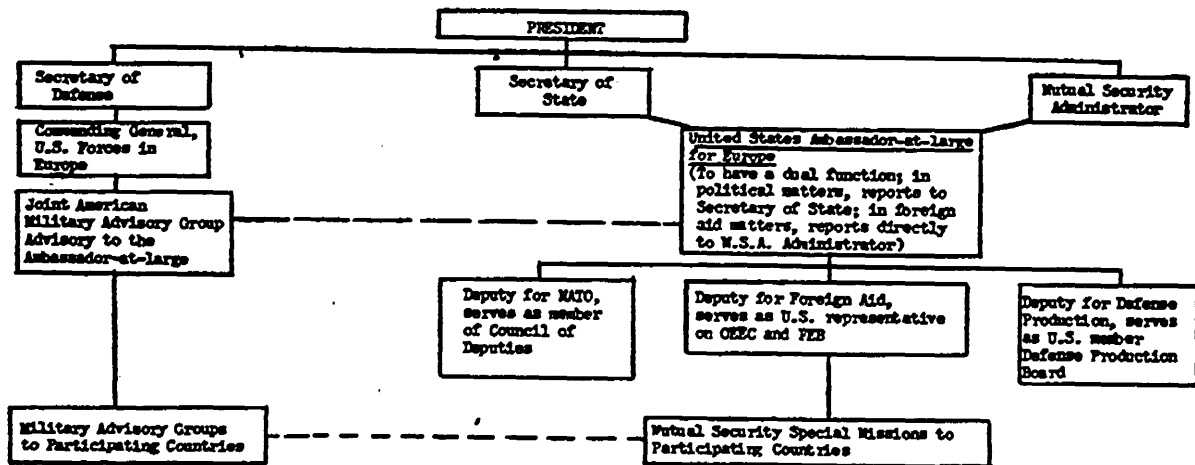

First of all, I wish to state my pleasure at your strong endorsement of the purposes of the Mutual Security Program and your forcefully expressed opinion that this program is essential for the security of the United States. In the second place, I would like to express my personal appreciation for the painstaking, thorough, and objective manner in which you and your committee have conducted the hearings on this program and the exhaustive way in which you have been exploring the important and intrinsically difficult problems of national security for which the program seeks to provide some answer.

At the same time, I must indicate my concern over the large reduction which your bill would make in the amounts of aid which were recommended in this program as it was submitted to the Congress by the President. In doing so, I am voicing the joint concern of myself, Secretary of Defense Marshall, the Administrator of ECA, Mr. William Foster, and others in the executive branch who are responsible for this program. In our opinion, these reductions would have an adverse effect on the success of the program and would, for this reason, run counter to our national interests. As a consequence, I am convinced that we must have failed in our presentation to bring out, or properly to emphasize, the facts, figures, and supporting arguments which, in our judgment, compel such a conclusion. In this letter, therefore, I should like briefly to summarize our position and to indicate our readiness to furnish any additional testimony or information which the committee might find helpful.

Before addressing myself to the specific reductions which you have recommended, I would like to say a few words about the program as a whole and the manner in which it was constructed.

First, I want to reiterate a statement which I made when I appeared before your committee—that the size of the program does not reflect requirements but

MUTUAL SECURITY ADMINISTRATION (EUROPE)

that rather, on the contrary, its size was drastically reduced below requirements because of limitations in readily available equipment, supplies, and technical personnel. In other words, the amounts of assistance recommended by the executive branch do not begin to fill those foreign needs which, if it were not for current scarcities in military equipment and other materials of aid, our national interests would dictate should be met in full.

Thus, the military aid which we actually requested had already been severely cut back from requirements as they were developed by our military authorities. Our production experts determined that any larger total military-aid appropriations, when considered in conjunction with our own military appropriations, would not in fact result in the production of any larger quantities of military equipment during this fiscal year than under the program proposed. The limitation here is the capacity of American industry, operating at the present level of mobilization, to carry out a bigger production program during 1952 than the one which is called for by a combination of the President's proposals for our own Military Establishment and for foreign military aid. We believe the present military aid program to be feasible, but we wish, because the requirements certainly so demand, that it might be materially increased. Similarly, in the case of economic and technical assistance, we have been confronted with serious world-wide shortages in raw materials, machine tools, industrial equipment, and technicians, and these shortages have handicapped us in developing programs of an economic and technical character which are adequate fully to accomplish our objectives.

The program which was submitted represents the product of nearly a year's work on the part of some of the ablest people in the executive branch of the Government. It is one of the most carefully prepared programs that has ever been transmitted to the Congress. Requirements were developed in great detail through exhaustive field studies and thoroughly screened. These requirements were considered in conjunction with the requirements of our own Defense Establishment and the civilian economy after equally careful studies had been made of our resources and productive capacity. The amount of the program was repeatedly cut back, representing the elimination or deferment of less urgent requirements because of limitations in resources. One of these progressive cut-backs is reflected in the difference of more than \$1,150,000,000 between the amount for foreign aid contained in the President's budget message and the amount proposed in the specific program now before you.

If time were not crucial, the further sizable reductions which you propose might not have the same adverse consequences that we believe they now do. Under such circumstances the meeting of requirements could be phased over a longer period. Today, however, time is crucial, and the future of our Nation will depend upon how well we use the time that we still have available to build strength in places where strength is critical to the survival of free nations. The longer that situations of great military, political, and economic weakness prevail in various areas of the free world, the longer will we face the risk that Soviet exploitation of these situations will precipitate a third world war or cause the loss of peoples that are vital to the position of the free nations. If the free world had already attained the degree of strength which, over the next few years, the Mutual Security Program should help to create, the possibility of other Koreans would be vastly reduced, as would the danger that vital regions will fall prey to Soviet subversion. Until the day when this level of strength has been achieved, and can be maintained, the present danger does not merely continue, it increases, because the Soviet world is relentlessly seeking to improve its military posture and has accelerated its efforts to capitalize on the poverty, sickness, ignorance, and frustration which prevail in many areas of the free world where our technical and economic assistance could do so much in helping to remove these conditions and in giving their peoples a hope for the future. Time, therefore, is vital in this whole field, and we cannot afford to postpone until tomorrow any of those measures which we have the capacity and national interest to undertake today.

I turn now to the specific consequences which would flow from the particular reductions that you have suggested.

In the case of Europe, your bill would reduce the aggregate amount available for foreign assistance by \$550,000,000--\$285,000,000 in military aid funds and \$265,000,000 in the funds available for economic assistance. It is our considered judgment that this reduction would seriously affect our efforts to build military strength in Europe and set back the present already much too extended timetable for raising and equipping the forces which are required by General Eisenhower.

I can best explain the reasons for the foregoing conclusion by reviewing the processes by which the amounts proposed by the President were arrived at in the first instance. As you know, the North Atlantic Treaty Organization has developed, and the participating governments have approved, a military plan which calls for the creation within a specified period of forces which will be capable of withstanding aggression against the North Atlantic Treaty area. The general size and composition of these forces has been initially defined; the cost of raising, maintaining, and equipping them has been roughly estimated; and the general magnitude of the capital equipment requirements for them has been calculated. In addition, estimates have been made of the extent to which the European NATO members can, during the specified period, and upon the assumption that United States economic assistance of a marginal nature will be continued, pay for the support, training, equipment, and facilities which such forces will need. With these several calculations in hand, it has been possible to make a rough approximation of that portion of the total capital equipment requirement which may need to come from, or be financed directly by, non-European sources, principally the United States. The military assistance funds requested by the President would make possible one of several successive installments for meeting this total amount.

Subsequent screening of this plan by General Eisenhower may result in some reduction in these requirements, but it is also possible that such a review may indicate the necessity for an increase. Subject only to this qualification, I am in a position to assure you, after considering the time period within which the plan should be completed and the long lead times involved in producing military equipment, that the military assistance proposed by the President for the forthcoming year represents a disproportionately small slice of the total requirements. The proposed slice would be much larger if our productive capabilities appeared adequate, at the present level of mobilization, to make it larger. The physical requirements exist, and they cannot be disregarded. They are among the hard facts with which we must contend if we are to reach the end which we seek. Any reduction in the funds which we have sought can therefore only postpone, not alter the necessity for, the fulfillment of these requirements. Such a postponement, moreover, while it in no way increases the ultimate saving to the United States, does have the effect of decreasing, and by a disproportionately large amount, the security which the United States might otherwise attain. For one thing it lengthens the period of serious war risk by deferring the day when strength adequate to deter or repel aggression will exist in Europe. Moreover, failure to deliver this equipment on the schedules which have previously been worked out can upset the plans for the raising and training of forces which have already been agreed to by our North Atlantic Treaty partners. Thus, it can retard the process of European mobilization, for the raising and training of forces must go hand in hand with the provision of equipment, and the former must invariably be slowed down as the rate of deliveries is reduced. Such a cut would, in addition, make it much more difficult, out of the equipment to be produced from the funds included in this legislation, and in the event that future developments should make this advisable, to divert any substantial quantities to Germany or other non-NATO countries.

The reduction in economic aid would, if anything, have equally adverse effects on the rearmament of Europe. As we have constantly stressed, one of our principal purposes in this program is to help the Europeans to carry as much of the rearmament burden as they can without undermining the basic economic and social structure which we and they have worked so hard to create through the European recovery program. Such an approach not only increases the speed with which we can obtain real strength in Europe but also reduces the period during which the maintenance of this strength will require continued assistance from this country. The proposed reduction will slow both of these processes.

Our economic aid has been, and will continue to be, marginal in the sense that it represents those resources which the Europeans do not have and cannot obtain for themselves, but which they require in order to develop and make the fullest use of their own resources. Our economic assistance as administered has had a multiplying effect in that a dollar's worth of such assistance, when coupled with the manpower, materials, and facilities already available in Europe, has resulted in increased output many times in excess of that dollar. In this way the productive capacity of Europe has been greatly increased, and this increase is largely responsible for the fact that Europeans have been able to carry the significant burdens of rearmament that have already been undertaken. Since consumption, on the average, is close to the minimum level, any further significant

increases in the European defense effort are dependent upon continued increases in production output. A reduction in assistance can only lead to a reduction in the ability of the Europeans to increase their output and thereby to provide greater amounts for defense purposes. The result, here again, will be a postponement of the day when these nations can be self-sufficient, with a probable consequent increase in the total ultimate cost to the United States, and a postponement of the time when General Eisenhower will have the necessary military strength behind him.

While it is true, as you have indicated, that European defense production has grown more slowly than we had originally hoped and expected, progress has been substantial, and a large number of the early physical and technical obstacles to the acceleration of this process have now been or will shortly be removed. With their removal, the big remaining obstacle for the Europeans is the problem of financing—the problem of mobilizing resources of their own which are sufficient to support this production together with all the other military tasks they must perform. Since the economic aid proposed for the NATO countries is already based on optimistic assumptions concerning the defense burdens which each of these countries can finance for itself, the suggested reduction can have no other effect than to limit the military efforts which these countries will be able to make during the year ahead. Moreover, because of the multiplying effect of our economic assistance, to which I referred above, the reduction will curtail these efforts by more than the dollar value of the economic assistance which is withheld. At a time when each one of the participating nations should do everything of which it is physically capable, it would be unfortunate if our aggregate effort should fall seriously short of the total effort which, through the judicious use of United States economic assistance, would otherwise be possible.

In the case of the Far East and south and southeast Asia, the proposals contained in your bill would reduce the aggregate amount of authorized economic assistance from \$375,000,000 to \$225,000,000, or a reduction of 40 percent. \$100,000,000 of the total cut would be reflected by the deduction of this amount from the authorization for \$112,500,000 in new funds which was requested by the President for relief and reconstruction work in Korea. The other \$50,000,000 would constitute an approximately 20-percent decrease in the \$262,500,000 recommended for economic and technical assistance in south and southeast Asia, Formosa, and the Philippines. The total reduction would necessitate a revision in our present plans, and such revision would, in our opinion, decrease our ability to attain important national security objectives in this critical region.

In this vast area, an expanse embracing nearly 30 percent of the world's population, the economic programs, as they were submitted, are, when measured against our vital interests in the area and the needs of the area, of modest proportions. They represent only 3 percent of the amount which has been proposed for the mutual-security program as a whole. Their relatively small size was again dictated by limitations in available materials and technical personnel and by the extent to which available aid could be effectively utilized, under the conditions existing in these countries, to advance the security of the free nations. Over 80 percent of the total amount requested has been programmed for four countries—Formosa, the Philippines, Indochina, and India—where either the size of the need or the critical character of the immediate situation, or both, necessitate the largest effort in terms of assistance. In most of the remaining countries in this area, the planned programs are so small that any appreciable reduction therein would materially reduce, if not eliminate, the value of proceeding with them, and yet their abandonment would, we believe, be detrimental to our efforts to build real strength in this important corner of the world. Consequently, as a practical matter, all or substantially all of the \$50,000,000 cut would necessarily come out of the present programs for the four countries which I have mentioned. I shall therefore review the specific results that would follow if this were done.

The assistance proposed for the Philippines is designed to make possible the implementation of the long-term recommendations of the Bell mission for the recovery and stabilization of the Philippine economy. This mission made the most careful study of the situation existing in the Philippines and its conclusions have been endorsed both by this Government and by the Philippine Government as a sound approach to the economic problems of this new country. A portion of these recommendations concern far-reaching and politically difficult actions to be taken by the Philippine Government itself. Many of these actions have already been taken, and they have been taken in the faith that other recommendations in the report—those calling for actions by

the United States—would also be carried out. Failure on the part of this Government to undertake these actions would be viewed as a breach of a moral commitment, and would make more difficult, and delay the economic recovery which the report envisaged. Since the problems of the Philippines, including the problem posed by the Communist guerrilla forces, are in large measure a product of the country's economic plight, failure to address the evil at its root will prolong the situation which now exists. Moreover, the military assistance which we are providing to assist in eliminating the Communist guerrilla threat will prove useless in the long run if the conditions which have given rise to and nourished the Huk movement are permitted to continue. We risk this result if any appreciable portion of the proposed \$50,000,000 cut were taken from the Philippine program.

I hardly need to stress the importance of Formosa or to describe the difficult economic burden which has been imposed on this small island by the necessity of maintaining not only a civilian population which has been augmented by refugees from the mainland, but also a military force in the neighborhood of a half million men. We are attempting by the provision of large quantities of military assistance to make these people relatively secure in the event of any attempted Chinese Communist invasion. This effort will be impossible of success, or at least meaningless in the end, if economic conditions in Formosa should seriously deteriorate or if the country should be unable to provide the basic support required by the military forces. The economic aid which we have proposed has a twofold purpose—first, to make it possible for the Chinese Government to feed, clothe, provide the facilities for, and otherwise to maintain during the coming year, the military forces to which we are furnishing equipment and, second, to increase the capacity of this island to become self-supporting at the earliest possible future date. The application of all or some part of the \$50,000,000 cut to the projected Formosan program would therefore have either one or both of the following consequences: (1) Extend the future period during which Formosa would be dependent on outside economic assistance or (2) deprive the Formosan forces, with all the adverse effects on morale and military effectiveness which this would entail, of certain essential maintenance support. The overstrained Formosan economy cannot carry the entire military load without our help.

In Indochina the battle for southeast Asia is now being bitterly waged. Much of the country is a theater of active military operations, and on the outcome of these operations may hang the fate of free Asia. At the moment, 150,000 French Union troops, together with slowly increasing forces of the associated states, are holding their own. It is nonetheless clear that even with our military assistance, it will be difficult to continue to hold in the future, not alone to improve the situation, unless a number of other developments occur. Unless the governments of the associated states can deal with the problems of relief that are created by the scorched earth tactics of the guerrillas, can develop institutions which are responsive to the needs of their people, can raise and support additional forces of their own to augment, and eventually to replace, the French Union troops, and can commence projects which promise a better future for their subjects, the situation will become hopeless. At their present stage of development, and beset by widespread hostilities and subversion, these new states are unable to take all of these steps without the kind of technical and economic assistance that we have proposed in the current program. The value of our military assistance in the solution of current military difficulties will be materially lessened unless this complementary economic and technical aid is also provided. The application of all or an appreciable portion of the \$50,000,000 reduction to the Indochina program would thus materially detract from the attainment of our objectives.

The problems of India have had the special attention of your committee on several occasions during the last 6 months, and I need not belabor them. The continued freedom of its 350,000,000 people from Soviet control is obviously a matter of great moment to the rest of the free nations. In relation to its importance, population, and needs, the amount of aid which we have recommended is the minimum needed in order to begin an effective attack on India's central problem—the shortage of food. We believe it is necessary to expand, and to complement with essential supplies, the small technical assistance projects which are directed almost entirely to increasing the production of food. In addition, it is important to effect a rapid increase in the base of Indian agriculture—to expand India's agricultural "plant capacity" by clearance of new land, by ground-

water irrigation of land that is now marginal, and by the expansion of capacity to produce and use fertilizer. The application of all, or any appreciable portion, of the \$50,000,000 reduction to this program would make the implementation of these measures impossible.

As a practical matter, therefore, this reduction, if it is allowed to stand, would necessarily eliminate, or seriously impair, the programs which have been planned for one or more of the above four countries and, in doing so, materially hamper our efforts to build strength in Asia. Without such strength, Asia is likely to be lost to Soviet communism, and such loss would do incalculable damage to our capacity to defend ourselves. Although some of the projects which are proposed are long-range in the sense that they will take a number of years to come to fruition, they are essential to this strength, and if they are not commenced now, in this critical period when the future of the free world is being shaped, the reasons for commencing them, and the opportunity to commence them, may well be lost. The free countries may then already have been absorbed in the Soviet sphere.

I am also concerned over the effect of the proposed cut of \$100,000,000 in the authorization of funds for Korean relief and rehabilitation upon the morale of the Korean people, upon their willingness and ability to continue resistance to Communist control, and upon the contributions which other countries have made or pledged for the relief and rehabilitation of the Korean people. I fully sympathize with the considerations which led you to propose this reduction, but I believe that those which I am setting forth below should be controlling.

The Korean Government and people are already familiar with the proposed \$250,000,000 program of the United Nations, and with the fact that the United States, subject to the approval of the Congress, has pledged \$102,500,000 toward this program. The Korean people will not understand the failure of this Government to authorize an appropriation equivalent to the United States pledge and will be disturbed over the implications of this failure for their future. Only the hope of an eventual improvement in their serious economic plight, a hope which is symbolized in the proposed United Nations program, has sustained their morale and will to endure their present hardships and sufferings. During this period of armistice negotiations, moreover, they are particularly apprehensive over the long-run intentions of the United States and the United Nations with respect to their country. The recent announcement of arrangements between the United Command and the United Nations Korean Reconstruction Agency has been extremely helpful, according to our Ambassador, in persuading the Koreans that there was no intention to desert them.

I hardly need emphasize the intimate relationship between the morale of the Korean civilian population and the success of the armies operating in Korea, if warfare continues, and of its similar relationship to the maintenance of political stability, if warfare should cease. I believe that the effect of low morale or disillusionment upon Korean cooperativeness in military and political negotiations, and upon their determination by their own efforts to create military and economic strength, is also evident. The results of low morale could be disastrous and largely undo the accomplishments of our costly military efforts.

I should also stress that an indication of congressional unwillingness to authorize the full amount pledged by the United States to the United Nations Korean Reconstruction Agency (UNKRA), subject to congressional approval, would have an unfortunate effect on the similar legislative actions which are required at this time in other countries in fulfillment of their own pledges. It would also certainly affect our expectation that additional countries will contribute to the financial support of this undertaking. In addition, the United States must not overlook the fact that certain other nations have already made their pledges good. To name only one, Canada has paid its contribution of \$7,250,000. The United Kingdom, its contribution of \$28,000,000 authorized by Parliament, has indicated that its pledge was made with the anticipated United States contribution in mind and that its payments will be governed by the payments made by the United States. I, therefore, think that if the United States fails to exercise leadership by fulfilling its moral commitment to this undertaking such action will have an adverse effect on the promised or anticipated contributions of other nations, whereas forthright action now in accordance with our pledge is likely to stimulate such contributions. Such a development might, in view of our residual responsibility to the Republic of Korea, result in a greater total cost to the United States in the long run.

While the date for commencement of a major program cannot yet be fixed, it is likely that it will be under way sufficiently early in the current United States fiscal year so as to require large amounts available for prompt commitment. The

United States contribution will require action by the Appropriations Committees as well as by the committees concerned with foreign affairs, and there is a danger that funds could not be made available in time if the full authorization were not now approved.

The United States should, by authorizing the full contribution now, honor its moral obligation. In this way it will affirm its good faith and give an important vote of confidence to these heavily burdened people who have suffered some \$2,000,000,000 in war damage to their homes, farms, hospitals, and businesses.

I hope that the foregoing review of the effects of the proposed reductions is sufficiently explicit and detailed to provide you with a clear understanding of the reasons for our concern over your proposals and of the importance which we attach to an authorization for the full amounts requested. If it fails to do so, we are prepared to appear at any time to furnish further explanations.

Sincerely yours,

DEAN ACHESON.

ECONOMIC COOPERATION ADMINISTRATION,
Washington 25, D. C., August 7, 1951.

HON. JAMES P. RICHARDS,
Chairman, House Foreign Affairs Committee,
House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: May I at the outset express my sincere appreciation for the tact, consideration, and patience with which you and your committee have treated the difficult and important hearings in connection with our Mutual Security Program.

I am writing at this time because I am greatly concerned over the \$435 million reduction in the economic aid portion of the Mutual Security Program, as proposed in your bill H. R. 5020. This represents a reduction of about 17 percent in the amount sought by ECA for the European program and nearly 20 percent in the amount sought for the Far East program (apart from the Korean rehabilitation program, where the cut approximates nearly 90 percent of the sum requested). As you know, we have historically asked for funds only to the carefully calculated minimum amount deemed necessary for ECA to do its job. The same criteria were used this year and the amount was based on optimistic determinations as to continuing recovery and a frugal estimate of the needs of the recipient nations. The aid program proposed was prepared on an austerity basis and is the agencies' estimate of the minimum necessary for the European governments to undertake the military tasks imposed on them under our Joint plan. Such a reduction in the supply of industrial goods and necessary food can only result in an even greater inability of the European countries to mount the defense efforts that we are relying on from them.

Specifically, you propose a cut of \$285 million from the already severely restricted amounts provided for the countries covered in title I of the act. This will have the effect of sharply limiting the ability of Europe to attain even the presently contemplated levels of rearmament which, as you know from our testimony, are even now not nearly adequate. Moreover, due to the relationship of the economic aid portions of the bill to the military production features which it is intended to support, the elimination of \$285 million will actually amount to a cut-back in terms of military equipment of several times that amount.

Continental Western Europe will need to import \$3.2 billions worth of dollar imports, such as fuels, raw materials, capital equipment, and other manufactures, as well as food, feed, fertilizer, natural fibers, and other agricultural products. As you know, in fiscal 1952, these imports are much more directly related to defense than has been true in the past. Cuts in these imports would inevitably and directly affect the level of production in Europe. Goods such as these are processed and manufactured within the European countries. In this process, the value added by European producers is between four and six times the initial value of the goods. Consequently, European production would be cut, or its expansion would be retarded, by an amount four to six times as great as the amount of the reduction in imports. Nor is this the full story, for one effect of the cut in production would be to interfere with European export earnings and thus to curtail further the imports that the Europeans are planning to finance with their own earnings.

Going beyond industrial raw materials, a part of the cut, possibly a large part, would fall on capital goods. Insofar as these are items of equipment required for the expansion and modernization of European industry, the inability to purchase them might not affect production currently but would in a direct and obvious fashion retard the recovery process and interfere with military production planning. A substantial part of the industrial machinery and equipment to be imported from the United States is accounted for, however, by spare parts. No cuts would be possible in this category without risk of a crippling effect on current production. Finally, it should be borne in mind that Europe's capital goods and machinery imports from the United States consist of items not available elsewhere. Since these usually constitute only a small proportion of the total cost of capital projects undertaken, the inability to obtain these items would, again, have a large multiple effect upon the rate of investment and production in Europe.

The economic aid program was specifically designed to make it possible for the Western European countries to mount defense establishments capable of withstanding European aggression. The defense portion of this program assumed by the European countries calls for a significant drain on their resources, particularly taking into account the level of income in Europe and the recent date of their insecure recovery from the postwar crisis. It should be remembered that the Europeans are being called upon to supply most of the manpower for the defense plan. They are, themselves, undertaking the costs of, supporting this manpower, maintaining and operating equipment and matériel, and the major portion of the cost of basic construction for such items as airfields and communications. Due to the lower-cost factors which are applicable to military preparations in Europe, the use of United States dollar aid means much more in terms of actual equipment produced there. The amount proposed to be eliminated from the European area will result in a substantial reduction in military expenditures, in production of matériel, and in maintenance of major equipment. Even if this cut were to be offset by an increase in MDAP aid, in order to obtain equivalent value, it would have to be of the general magnitude of a billion dollars. Alternatively, if there is no offsetting increase, a reduction in the combat-ready divisions of European troops available to General Eisenhower will result.

With respect to the proposed cut of \$50 million for the countries covered in title III, we already have grave doubts that the \$262.5 million requested will meet the exigencies of the situations in the countries of the Far East. Any cut in the proposed \$90 million aid figure for Formosa will be a severe blow to United States politico-military policy. In Indochina, we are engaged in an economic support operation, directly involved in a military contest with active Communist aggression. Any reduction in the aid proposed in this area would be a real blow to United States prestige and provide telling propaganda material for the Communist segments of this and other countries. In Burma, Thailand, and Indonesia, we have already scaled our programs to an aggregate of less than \$30 million, which represents a contribution of less than 80 cents per capita for these countries. If an even lower figure should now be necessary, we shall severely compromise our effort to strengthen the economic and political position of these countries. The program for the Philippines is tied to the Bell recommendations and conditioned upon undertakings to be assumed by the Philippine Government. In reliance on this commitment, the Philippine Government has taken steps in the fields of increased taxes, minimum wages, and social improvements to qualify themselves for aid from the United States. To withdraw that aid now will certainly effect our position in the Far East and threaten the progress now apparent in the Philippines.

In summary, the effect of these cuts in Europe will be to retard the expansion of production and of raising and supporting the forces and facilities which the defense programs absolutely require. In the Far East, where programs in most instances have barely commenced, they will impair our effectiveness and, in some instances, may warrant the total withdrawal of essential country-aid programs. I urge upon you, therefore, to reconsider the amounts recommended in the substitute bill introduced by you and to restore the proposals of our submission. If you should desire any further justification of the detail in our presentation, we will, of course, be happy to provide it.

Sincerely yours,

WILLIAM O. FOSTER, Administrator.

DEPARTMENT OF STATE,
Washington, August 7, 1951.

Hon. JAMES P. RICHARDS,
Chairman, Committee on Foreign Affairs,
United States House of Representatives.

MY DEAR MR. RICHARDS: I am pleased to furnish the attached statement showing the number of persons included under the training and exchange aspects of the point 4 program and related programs. This statement was requested by the Honorable John M. Vorys for his information, and by the Honorable Abraham A. Ribicoff for the record on Monday, July 30, 1951, during the hearings before your committee on the Mutual Security Program.

I have sent copies of this statement directly to Congressmen Vorys and Ribicoff for their personal information.

Most of the exchanges authorized are for training in the United States; however, there are other training centers now in use in Puerto Rico and Beirut, and it is contemplated that additional training centers will be established outside the United States when it is advantageous to do so.

Sincerely yours,

HENRY G. BENNETT,
Administrator, Technical Cooperation Administration.

SUMMARY OF TRAINING AND EXCHANGE PROGRAMS WITH GEOGRAPHIC
DISTRIBUTION, FISCAL YEAR 1951

The training and exchange activities sponsored by the United States Government come under five principal headings, and in addition there are a few special programs limited to one or two countries, as shown in the attached statement. The five principal programs are as follows: Point 4, ECA, Smith-Mundt, Fulbright, and UN. The point 4 program makes maximum use of existing administrative machinery established by the Office of Educational Exchange in the State Department for the selection and processing of trainees. This procedure gives maximum insurance against duplication in the three programs under the State Department's supervision; viz point 4, Smith-Mundt, and Fulbright. The point 4 administration endeavors to avoid duplication of the training and exchange activities of other agencies, and observes the following precautions:

(a) Authorizes only those exchanges which serve the long-range economic development objectives of the program. Such exchanges differ from those of ECA which concentrate on additional production related to the present emergency, and also from those cultural and general educational exchanges administered by the Office of Educational Exchange of the State Department.

(b) Coordinates closely with the UN and its specialized agencies so that it is informed of each request received for training and exchange by the UN.

(c) Utilizes field selection machinery and the processing facilities of the Office of Educational Exchange wherever possible.

There follows a summary table showing the number of exchanges authorized for fiscal year 1951 by program.

Exchanges authorized for fiscal year 1951, all programs

Program	Number of persons
Point 4.....	882
ECA.....	2,808
Smith-Mundt (Public Law 402).....	1,047
Fulbright (Public Law 581) ¹	1,331
Smith-Mundt, Fulbright ¹	912
UN ¹	900
Special:	
Iranian trust fund (Public Law 581).....	10
Chinese students (not exchanges).....	2,800
Japanese reorientation (U. S. Army).....	840
Austria and Germany (reorientation).....	3,040
Finnish educational exchange.....	65

¹ Round trip travel only.

² Joint Smith-Mundt, Fulbright grants.

³ Covers period from July 1 to Dec. 31, 1950.

Attached to this statement is a table showing the application of the several governmental training and education exchange programs to the various countries of the world. The following paragraphs outline the scope and approximate size of each of the programs:

(1) *Point 4 exchanges.*—The point 4 program, authorized by Public Law 535, Eighty-first Congress, brings trainees to training centers in the United States and elsewhere from the economically underdeveloped countries of Latin America, Africa, and the Near East. These persons are selected because of their ability to make a contribution to the economic development of their countries. Training is given in a wide variety of skills having economic significance. Eight hundred and sixty-two exchanges were approved in fiscal year 1951 under the point 4 program.

(2) *ECA exchanges.*—The Economic Cooperation Administration provides for technical training and intensive study of production techniques for persons from the countries of Europe and their dependent overseas territories, and from Korea, China, the Philippines, and southeast Asia. During fiscal year 1951, 2,835 trainees came to the United States from Western Europe, and 73 from the Far East. Most of these came for relatively short periods. Attention was usually given to training in industrial production techniques.

(3) *Smith-Mundt exchanges.*—The Office of Educational Exchange of the State Department, under Public Law 402, Eightieth Congress the Smith-Mundt Act, carries out professional and cultural exchanges with most of the countries of the world. This program is active in a variety of fields, but technical personnel are not included in this program wherever point 4 or ECA programs are active. Within the Department of State there is close coordination between the Technical Cooperation Administration and the Office of Educational Exchange to insure against duplication. A total of 1,047 exchanges were approved during fiscal year 1951.

(4) *Fulbright exchanges.*—The Office of Educational Exchange administers the Fulbright program under Public Law 584, Seventy-ninth Congress, which is applicable to 18 countries in Europe, the Near East, and the Far East. The Smith-Mundt and Fulbright programs are operated so as to supplement each other, many of the grants being joint awards. Coordination between the Fulbright program and the technical assistance programs of point 4 and ECA is effected in the field by having the local ECA or TCA representatives sit on the board of the local Fulbright Foundation or meet with it when candidates are selected. Approximately 1,331 grants were made under the Fulbright program in fiscal year 1951.

(5) *UN exchanges.*—The expanded program of technical assistance under the United Nations and the related specialized agencies, is operative in 42 countries, in all parts of the world. Coordination with the point 4 program is achieved by a constant exchange of information between Washington and the United Nations headquarters on requests for technical assistance, and by United States missions in the field which keep themselves informed on requests made to international agencies. In the first fiscal period of the United Nations program from July 1, 1950, to December 31, 1950, a total of nearly 900 fellowships and scholarships were granted, or under consideration.

(c) *Special program exchanges.*—There are several special programs applicable in each case to only one or two countries. These, with approximate numbers of exchanges, are:

(a) Iran: Iranian trust fund, under Public Law 861, Eighty-first Congress, 10 persons.

(b) China: Assistance to Chinese students, under Public Law 535, Eighty-first Congress, title II. (No exchanges; 2,890 Chinese in the United States.)

(c) Japan and the Ryukyu Islands: Reorientation program operated by the United States Army; 840 persons.

(d) Austria and Germany: Program authorized under general appropriation act for 1951. Germany, 2,700 persons; Austria, 250 persons.

(e) Finland: Finnish educational exchange program, under Public Law 265, Eighty-first Congress, 65 persons.

In each case where more than one United States program is operative coordination procedures are in effect to insure that there will be no duplication of effort.

DEPARTMENT OF STATE,
TECHNICAL COOPERATION ADMINISTRATION,
Washington, August 7, 1951.

The Honorable JAMES P. RICHARDS,
Chairman, Committee on Foreign Affairs,
House of Representatives.

MY DEAR MR. RICHARDS: During my testimony before your committee on July 30, Mr. Javits asked me several related questions on the problems of securing adequate investment capital for the development of under-developed areas, and on the proposal for an international economic development agency of the World Bank by Mr. Nelson Rockefeller and the International Development Advisory Board. The attached statement provides my answers to these questions.

A copy of the enclosed statement has been sent directly to Mr. Javits for his personal information.

I shall be happy to give you any additional information you desire.

Sincerely yours,

HENRY G. BENNETT, Administrator.

STATEMENT BY DR. HENRY G. BENNETT ON SEVERAL PROBLEMS RELATED TO PROVIDING CAPITAL FOR THE DEVELOPMENT OF UNDERDEVELOPED AREAS

I have been asked to state my views on how the dearth of investment capital in the underdeveloped countries affects our program and what can be done to stimulate such investment. I have also been asked to give my views on Mr. Rockefeller's recommendation for an international economic development agency of the International Bank.

First of all, let me say that I fully recognize the importance of capital investment to economic development. To take only one example, we are all familiar with the impetus given the development of our own country by the investment of foreign capital from Europe. The fact that a dearth of investment capital exists in the underdeveloped countries today is one of the important reasons for the point 4 program.

I believe that domestic savings must provide the bulk of the capital for development of the underdeveloped areas as it has always done in the past. However, domestic investment alone will not be sufficient in many countries and will have to be supplemented by foreign investment, both public and private. Therefore, I believe that our Government should vigorously press forward in its efforts to create conditions favorable to private investment abroad. A major part of this effort is the negotiation of modern commercial treaties which include assurances of fair treatment of American investors. I also believe that limited guarantees of private investments, as previously proposed by the executive branch, would be of value. Long-term purchasing contracts and other market devices may be necessary to stimulate the development of critical materials abroad.

I question, however, whether the establishment and operation of an International Development Authority for distributing grants for economic development, as proposed by the International Development Advisory Board, is desirable at this time. My reasons for taking this position are given later in this statement.

The outflow of American private investment capital to underdeveloped areas in recent years has been disappointingly small in relation to need. In 1949, such investment was only \$352 million including reinvested earnings, and in 1950 it fell to \$308 million. Two-thirds of this investment was in the petroleum field.

I am convinced that the greatest inducement that can be offered investors of capital is profit. The potentialities for profitable investment in underdeveloped areas are high but are often difficult to realize both because basic facilities and services in the areas are so inadequate and because the purchasing power of the people is so low. To help improve the facilities, the services, and the people's buying power is the challenge to the point 4 program.

In the underdeveloped countries, 80 percent of the people, the consumers, live on the land. Their average income, of less than \$100 a year in 1949, is so low that they cannot be good customers of industry, either foreign or domestic. These people have pretty much the same human desires the world over. They would like to buy stores, kitchen utensils, furniture, bed sheets, clothing for their families, even radios and automobiles, if only they had the money. Now they are primarily concerned with getting enough food to eat. Such poor people cannot afford to save much above their meager consumption, and therefore local investment capital is inadequate. It is estimated that domestic savings are about 2 to 3 percent of national income in India and Ceylon where per capita incomes in 1949 were the equivalent of \$54 and \$75 per year. Capital in underdeveloped countries is so scarce that it is frequently hoarded, and sent abroad for security, used for short-term commercial lending at high interest rates, or invested in land and speculative activities. In this country net savings amounted to 16 percent of national income in 1950.

The only way I can see that the income and the savings of the masses of these people can be increased is for them to increase their own production. If they can grow enough corn and wheat and rice to satisfy their own needs and a little bit more, they can sell the surplus for ready cash. The surplus will need to be milled, and that calls for plants and machinery, which means capital investment. If they grow cotton in commercial quantities, that means gins and crushing mills, spinning and weaving plants, and a textile industry. These things require capital investment.

But the basic thing is to enable the people on the land to produce more, so they will have more products to sell and therefore more money to spend for the things they need and want. As their income rises, they create a profitable market for industries that require capital investment. In fact, I believe that if we help create this increased production and these profitable markets, you can't keep investors from coming in.

Generally speaking, to try to persuade investors to put their capital into ventures in these countries before a good market exists is to put the cart before the horse. Although the underdeveloped countries are predominantly agricultural, farming is practiced at a primitive level. I believe as a general rule we can say that agricultural development is a prerequisite of industrial development. Increased agricultural production provides both the raw materials for the small industries that are the next natural step in economic development, and the income that enables the people to buy the products of those industries.

Frankly, I think the best thing that point 4 can do to encourage capital investment in the underdeveloped countries as a whole is to work first with the people where they are, on the land, to enable them to create new wealth and new income that will make the investment of capital profitable.

As a general proposition, this is a long-range program, and I honestly can't promise that this process will open up opportunities for new markets and new industries overnight. But I do think it is the only sound way to proceed, so that the result in the long run will be satisfactory both to the people of the underdeveloped countries and to us.

Going at it this way doesn't cost very much. The millions of farmers and peasants in these countries don't need large quantities of expensive machinery like tractors and combines. Most of them farm plots so small that mechanized farming wouldn't be profitable. They need simple, inexpensive improvements—a little better seed, a little better plow, a long-handled instead of a short-handled hoe, a scythe instead of a sickle, a simple threshing machine instead of oxen treading out the grain, a way to preserve food from one harvest season to the next. Most of these things they can do themselves, with their own resources, if they are shown how.

In fact, as I have indicated, most of the capital that should go into building up these countries should come from within a large part of the natural resources and the labor be local, and there are limits to the foreign debt which underdeveloped countries can support. As the income of the people increases, the increased savings can be channeled into savings banks and insurance companies and used for economic development projects. One of the most constructive forms of technical assistance we can give is the advice and counsel of experienced technicians in the fields of administration, management, financing and small industries. We are already providing such assistance in some cases. For example, we are carrying out projects in Paraguay, Costa Rica, Saudi Arabia, and Pakistan in revision of the tax system, tariff structure, customs collection and the improvement of central banks. I expect we will need to expand our operations of this kind as the demand increases.

The fact is, the more the economies of the other countries grow, the more they find they can do for themselves, the greater the opportunities for private investment are likely to be. In the development of its 8-year program in the Colombo plan, the Indian Government estimated that domestic savings and investment would increase from 2½ to 4½ to 5 percent of a rising national income. The people become accustomed to thinking in business and financial terms that are familiar to us, and they become less suspicious of Americans with money to invest for a fair return.

There are already some specific instances where American capital can be invested to mutual advantage, and we are constantly on the lookout for them. On a selective basis, we intend to acquaint American interests with promising opportunities for investment and to help countries that need and want capital for specific developments to get in touch with potential investors.

Of course, there are other cases where outside public capital is needed for projects unsuitable for private investment. We work closely with the International Bank for Reconstruction and Development and with the Export-Import Bank on projects where technical cooperation and investment are dependent upon each other. These two institutions made loans of \$768 million in 1960 to underdeveloped countries. They provided financing for basic utilities—hydroelectric power, transportation, harbor development, irrigation projects, sewage systems and the like—which supplement and encourage, rather than compete with private capital. The Congress is being asked to increase the lending authority of the Export-Import Bank by \$1,000,000,000, and I support this proposal as a sound measure for assisting in the economic development of friendly countries.

I firmly believe that as the point 4 program progresses, we will learn much more about the possibilities of capital investment in the underdeveloped countries, and how it can be increased to their advantage and ours. I believe that we will find that constructive, imaginative thinking can provide solutions to many problems where the financing of economic development projects is involved.

Above all, I believe that a practical, down-to-earth program of technical cooperation which encourages, and is combined with sound capital investment can do much to increase productivity and improve living conditions in the underdeveloped countries without placing a heavy burden on the Public Treasury of the United States.

THE NEED FOR NEW INTERNATIONAL INSTITUTIONS

Mr. Javits asked me to give facts and figures leading to any support or lack of it for Mr. Nelson Rockefeller's recommendation for an international economic development agency of the World Bank. This brings up the question of grants for financing economic development, which I have not previously discussed, since one of the two new international agencies proposed by Mr. Rockefeller and his advisory board is the International Development Authority, a proposed grant institution.

I do not feel that it would be feasible at this time to establish an international development agency for the purpose of distributing grants. No organization can be truly international in character unless a sufficient number of countries are able to make effective and significant contributions to it. At the present time, it would be unrealistic to assume that such contributions, amounting to \$300 million according to the Rockefeller report, would be forthcoming from other members of the United Nations. I would hope that such grant aid as is made available by the Congress can be effectively utilized without creating new agencies and without establishing grant aid as a normal feature of international cooperation.

As to the desirability and feasibility of establishing an International Finance Corporation in connection with the International Bank, whose functions would include providing to private enterprise equity capital and loans to them without government guarantees, there appears to be some merit to such a proposal. However, it is not clear that a new agency as a subsidiary to the bank is required to perform this job, since the bank for example, could in most cases effect the same result by providing loan capital to national development banks or a group of local banks as it has done in Turkey, Ethiopia, and Mexico. However, the proposal certainly deserves study. I understand that the Economic and Social Council of the UN is being requested to initiate such a study.

DEPARTMENT OF STATE,
TECHNICAL COOPERATION ADMINISTRATION,
OFFICE OF THE ADMINISTRATOR,
Washington, August 7, 1951.

Hon. JAMES P. RICHARDS,
*Chairman, Committee on Foreign Affairs,
House of Representatives.*

MY DEAR MR. RICHARDS: During the hearings before the Committee on Foreign Affairs on Monday, July 30, 1951, a request was made by the Honorable James G. Fulton for a suggestion concerning the possible use of Chinese students in the point 4 program.

I am pleased to furnish the attached statement on this subject for inclusion in the record.

Sincerely yours,

HENRY G. BENNETT,
Administrator.

STATEMENT ON THE POSSIBLE USE OF CHINESE STUDENTS IN THE TECHNICAL
COOPERATION PROGRAM

I am informed that during fiscal year 1951, 2,800 grants were awarded to Chinese students and scholars in this country. While many of the graduates have gone back to Communist China (about 100 out of 1,000 graduates last year), most of the rest have found jobs here. The technically trained students, engineers and the like, who might be most useful in point 4 are the ones who have found it easiest to get regular jobs. Those who have studied in such fields as the law and the humanities have found it less easy to get work.

Most of these students have come to the United States either on their own responsibility or under the auspices of the Nationalist Government. They are not stranded here as a result of a United States Government program. Our responsibility for these students is perhaps limited more to general humanitarian considerations than to what might be termed an organizational responsibility.

In considering the possibility of using Chinese abroad as the representatives of the United States certain serious difficulties have become apparent. It is

in the countries of southeast Asia that they would be most useful, but it is in some of these very countries that the feeling against the Chinese is most acute, because of the extent to which the Chinese have infiltrated into their economic and political life. An additional deterrent is the fact that the families of these students are still in China, and through them it is possible that great pressures can be exercised. Very careful consideration should be given to the advisability of putting these students in positions of responsibility under the United States Government in overseas positions where such pressures could be applied.

My conclusion, therefore, is that we must be sympathetic but cautious in the use of Chinese students under the point 4 program. The solution to this problem might best be approached through other Government agencies.

STATEMENT BY HON. GEORGE C. McCHIE

THE INDEPENDENT COUNTRIES OF NORTHERN AFRICA

We are convinced that the modest aid programs proposed for the independent African countries of Libya, Liberia, and Ethiopia are fully justified. Each in its own way is an important unit in the Mutual Security Program.

The investment of private funds from the United States has made Liberia an important source of rubber. Export-Import Bank loans have enabled Liberia to export high-grade iron ore to the United States, the first shipment of which arrived in Baltimore on June 22. The Export-Import Bank loans are assisting in the development of Liberia's palm kernels and cocoa crops. The port of Monrovia, developed with United States assistance, makes these materials readily available for ocean transport.

The geographical location of Liberia fully justifies its continued development as a source of raw materials. Much remains to be done, however, before Liberia realizes its potential; the proposed aid program, emphasizing food production and public health, will enable Liberia to make best use of other resources, including its line of credit from the Export-Import Bank.

In Libya a people, previously under colonial status, are establishing a nation. The development of Libya as a stable state is important to the United States, who strongly supported the UN resolution providing for Libya's independence on or before January 1, 1952. Libya is of course contiguous with other near-eastern territories which have been discussed earlier in this presentation. Its coast line and its airfields are of great strategic importance to us. Its people require the assistance of the Mutual Security Program in order to build up their economy, which is largely agricultural and pastoral.

Ethiopia and Eritrea lie adjacent to the Red Sea, strategically located on the transport life line to the east and on the perimeter of the Near East. Ethiopia has been traditionally friendly to us and Ethiopian troops have recently arrived in Korea to participate in the UN military operation there. In view of the progressive attitude of the Government and its promising natural resources, Ethiopia again is a case where we can expect early returns from a modest program of assistance which will supplement aid which Ethiopia is now receiving through the International Bank.

The total aid proposed for these three African countries amounts to \$4 million. Dr. Bennett will deal with these programs more specifically.

STATEMENT OF AMBASSADOR HENRY F. GRADY ON AID TO IRAN

Iran lies in the long space between the two areas—Europe and the Far East—where American interest has been centered since the war. I think it warrants more attention than we as a Nation have been giving it.

Iran is a country about the size of our Southwest, and, like it, rather sparsely settled by around 15 million people. Most of these people are farmers living in poverty and illiteracy in the few parts of the country where there is now sufficient water for agriculture. The only industry of any size is oil which is located along the Persian Gulf.

The country has great potential wealth. Its oil reserves are tremendous; there are good indications of other minerals; and the land will blossom like our Southwest if the use of farm machinery, irrigation, and modern techniques can be developed. And the Iranian, though now untrained and unskilled, is a hard and intelligent worker.

Unfortunately the economic, social, and political structures of the country are so undeveloped that its wealth and manpower yield only a small return. One survey showed that the average per capita income of the rural population—including what the peasant grows for himself—is only the equivalent of about \$50 a year. The relationship of peasants to landlords is reminiscent of feudalism. While the forms of democracy are observed, only a small fraction of the people have yet been brought into participation in it. These blunt facts I mention not in a spirit of criticism, but to show how much needs to be done.

Iran with its oil, warm-water ports, and position as a buffer area offers a glittering target to the Russians. And to make it easier for the Soviets Iran possesses social unrest—and a 1,500-mile border with Russia.

Russia's pressure on its little neighbor has two prongs—fear and promise. As to the first, the Russians need do nothing. The fear that the Russians will sweep down on them grows naturally out of the historical attitude of Russia toward Iran, and, more recently, out of Russia's actions in Eastern Europe, in the Far East, and in Iran itself in 1945. This fear is deep and almost silent.

As to the second prong—promise—the Soviets are quite active. Through propaganda from across the border and through the Communist-inspired Tudeh Party within the country, there is a constant campaign along the familiar lines: "You are being exploited by the Anglo-American imperialists and by the corrupt landlords. Communism would end your poverty and oppression, and give you equality and a decent living."

What has been the American answer to this pressure? Frankly a small one. We delivered surplus arms under a \$25 million loan in 1948 and 1949, we began free deliveries of arms under MDAP in 1950. The initial amounts under MDAP have been modest in comparison with allotments to European countries, but have been as large as our American military advisers thought the Iranian Army and Air Force could usefully absorb. Under guidance of these American advisers the armed forces have shown considerable improvement in the last several years, and have attained greater skill in the handling of modern equipment. The armed forces are now capable of using increased amounts of military equipment.

The Iranians have no intention of building up an Iranian Army which can unassisted repel a full-scale invasion. The primary purpose of the Iranian Army is to safeguard this little country against the type of satellite attack used in Greece and Korea, and to guard against internal disorder fomented by foreign enemies. It is hoped that in time to come this army will be a strong partner in the world-wide defense of the free world.

On the economic side our material assistance to the country has consisted only of a small point 4 program. This is a village program designed to improve education, agriculture, health, and sanitation in the rural areas where 80 percent of the people live. The work is done through demonstration villages with American and Iranian technicians in agriculture, irrigation, rural education, public health, and sanitation showing farmers how to improve their production and standard of living.

We Americans who live in Iran—and I am speaking not just of Government officials but of businessmen, missionaries, journalists, doctors, and soldiers—all agree that education in the practical things of life, such as the village program gives, must come before democracy can take deep root in the country. The Iranians themselves, whether they be our friends or critics, educated city people or illiterate villagers, are enthusiastic about the program.

The third part of our American approach is the information program of USIE. Since this essential program is being presented to you at another time I will not go into it here.

So much for our efforts up to now. And now for a few comments.

There is a unanimous feeling among Iranians that our military aid should be accompanied by economic aid, and if forced to choose between the two, most Iranians would take the economic aid. Their reasoning is that an army is of very limited value if its country is weakened by poverty, illiteracy, and lack of strong social and political structures. I think we Americans agree with this principle. We have given it public recognition by assisting in the rebuilding of the European economy through ECA before embarking on a military program under MDAP. However, due to accidents of timing our military aid in Iran has preceded our economic aid, thus subjecting us to some well-deserved criticism. In our point 4 program we have begun to correct this, and the proposal now before you—balanced between economic and military—will carry us forward along the lines thought best by both Iranians and Americans.

In former consideration of economic aid for Iran the objection has sometimes arisen that the aid might be misused. I would like to meet this objection head-on. The Iranian government, it is true, is less able to administer an aid program than the governments of Western Europe. But this is not the point. We are granting aid where the need is greatest and not just where it will be administered the best. In fact, the same conditions which create the need for aid may also create a propensity for less efficient administration of the aid. If we hang back because the government is not all that we desire, we get nowhere. And furthermore, I am confident that we can help Iran to administer any economic aid so that it will be well spent.

In describing what our program has been I have in effect described what we plan our program to be in the future. The funds which we are requesting now will be used to carry on our past program with one modification. On the military side to attain the objectives stated we will use the money in roughly equal parts for new equipment, spare parts, and ammunition. On the economic side the technical-assistance program will be greatly expanded so that we will be reaching a sizable segment of the country rather than trying to do the job through a few demonstration centers. The new element in the program is that some funds will be used for capital improvements—wells, agricultural machinery, sawmills, and similar projects. This part of the program is really an extension of the technical aid, since the capital expenditures will be in close connection with our village instruction.

In addition to telling the Iranian farmer that a well or a steel plow is a good thing, we will make available through his Government a few wells and plows so that the demonstration will be practical as well as theoretical. Our capital-improvement program will be modest and, while it will produce some direct benefits in increased production, its primary purpose will be to teach, to show what can be done and to lead the way.

Iran is in a period of reawakening and nationalism. She is trying to catch up with the Western World in dozens of fields, and in this she needs help. Furthermore—and this is important—she needs some concrete demonstration of American interest in her welfare at this critical moment. She does not want a heavy hand of direction from any outside power, but she will welcome technical assistance, educational help, and engineering advice given in good spirit. In the last century the United States has gained a reputation in Iran for good intentions and impartiality. We have an opportunity to continue this reputation and to assist Iran to develop into a healthy partner in the free world.
